Bankers See Little Change In East Bloc Lending Risk

Reuters

NEW YORK — Despite the political and economic changes sweeping through Eastern Europe and the Soviet Union, the risks in making loans to those countries are little changed, according to a survey of international bankers released Thursday.

The bankers regard the most creditworthy nation to be Japan, trailed by Switzerland, West Germany, and the United States, according to the report, which was conducted by *Institutional Investor* magazine. The creditworthiness rankings of the top four nations were unchanged since a survey six months ago.

The poll of about 100 unidentified international bankers ranks the creditworthiness of 112 countries. The next report, for the six months ending March 1990, will appear in the March edition of the magazine.

The Soviet Union dropped to 25th place from 24th and Bulgaria dropped to 43d from 41st. On the other hand, Poland moved up one notch to 77th place as bankers concluded that its rating was so low that any political and economic initiatives would be a sign of improvement.

The nation whose creditworthiness improved the most was Chile, not only because of "good economic results, but also because it has achieved an aura of political stability and receptivity to foreign capital," the report said. However, it moved up only a notch in in the rankings, to 50th.

Mexico was also considered a much safer bet for repayment of loans as its economy performed strongly and rescheduling negotiations were going well.

But it was China and Colombia whose credibility rankings declined dramatically. China fell to 35th place from 27th, while Colombia dropped to 56th place from 48th.

... by country

SOVIET UNION

The United States will not join a proposed European Development Bank if the bulk of its resources is committed to shoring up the Soviet Union's flagging economy, Treasury Secretary Nicholas Brady said Wednesday in testimony before a House subcommittee.

Soviet Finance Minister Valentin Pavlov, who was in Washington this week meeting with U.S. officials, said he did not expect such a problem.

"We have no intention of joining the bank just to swallow its capital," Mr. Pavlov said through an interpreter. "We are against being singled out."

— Reuters

JAPAN

The Bank of Japan's governor, Yasushi Mieno, said the central bank was still monitoring the effect of higher interest rates on financial and currency markets and the economy following its December increase in the official discount rate to 4.25%.

He told reporters, after returning from a trip to Europe, that the United States and other major industrialized nations would continue strong intervention as necessary to counter currency speculation.

Speculation earlier in the week had focused on the possibility that Mr. Mieno might announce a new increase in the discount rate upon his return from Europe.

— Reuters

THE PHILIPPINES

The Philippines and Britain have signed an agreement to reschedule $25.8 million of debt owed the U.K. Export Credit Guarantee Department, the Philippine Department of Finance said in Manila.

The accord covers official loans maturing between June 1989 and June 1991.

The Philippines is in the process of rescheduling $2.2 billion of official debt owed to 14 Paris Club members falling due over two years. It had previously signed agreements with the United States, Canada, and four other countries.

— Reuters

CHINA

Fearing a recession would be induced by excessive austerity measures, China announced it would inject money into the economy and cut interest rates.

Official newspapers in Beijing said the moves were decided at a banking conference conducted by telephone and headed by the central bank's President Li Guixian on Wednesday.

"They are afraid of a recession which they are in danger of causing. There is no need to continue throttling the economy until its completely lifeless," said a Western economist.

— Reuters

GREECE

The National Mortgage Bank of Greece said it and 12 of its employees in the United States have been indicted by a federal grand jury in New York on 30 charges of unauthorized banking and violations of the Bank Secrecy Act.

The bank, whose majority owner is the government of Greece, said it and its employees intend to plead not guilty and to establish their innocence during the trial.

Venezuelan Debt Pact May Be Near

Negotiators Expect Plan to Include Menu of Options

By JAMES R. KRAUS

NEW YORK — Venezuela and its creditor banks could reach a preliminary debt-reduction agreement over the weekend, according to senior U.S. bankers and Venezuelan officials involved in the negotiations.

"We're going to have a new money and debt-reduction scheme," said one U.S. banker, who asked not to be identified.

Negotiators, meeting in New York this week, declined to spell out the details but said that the agreement is likely to include a menu of options, including new loans, temporary interest rate reduction, and a reduction in principal of between 20% and 35% on a portion of the $22 billion Venezuela owes to foreign banks.

Loan Buyback Option

Another option would allow Venezuela to buy back a portion of its foreign bank debt from banks that offer to sell it at the deepest discount.

As of Sept. 30, Venezuela owed U.S. banks $7.43 billion. BankAmerica is the single biggest U.S. lender to Venezuela, with $ 1.03 billion in medium- and long-term loans, followed by Bankers Trust Co., with $960 million and Chase Manhattan Bank, with $800 million.

As with a debt-reduction agreement signed with Mexico last month, banks that agree to cut the interest or principal on their loans to Venezuela would be allowed to exchange them for government bonds backed by guarantees from the International Monetary Fund and the World Bank, sources said.

Serious debt-reduction talks began with Venezuela in November but were hampered by the country's demands for a reduction of at least 50% of its foreign bank debt.

Banks rejected the Venezuelan demands, arguing that Venezuela's ability to repay its debts was far stronger than the government maintained.

A Year of Debt Reduction

A debt-reduction agreement with Venezuela would be the fourth since Treasury Secretary Nicholas F. Brady one year ago called on commercial banks to forgive a portion of their loans to financially troubled countries in order to spur their economic recovery.

Agreements have so far been signed with Mexico, Costa Rica, andthe Philippines. Debt-reduction negotiations are currently under way with Morocco.

A new government in Brazil, which takes office today, is also expected to begin debt-reduction talks with banks soon. ☐

A Venezuelan pact would be the fourth under the Brady plan for debt reduction.

Study Finds U.S., U.K. Families Borrow Most

By JOHN EVANS

LONDON — The average American household owes nearly five times the debt of its counterpart in Europe and easily leads the world in use of consumer credit, according to a British consumer protection agency.

However, Britain tops all other industrial nations in terms of interest rates, which can range up to 500% annually, says the National Consumer Council, in a report distributed to banks, finance houses, and thrifts.

British 2d Only to Americans

The average U.S. household has mortgage and consumer debt of $71,500, more than half the average British family's borrowings of $35,500.

The British average is the highest in Europe. West Germany had borrowings of $27,700 for each household, France $27,650, and the Netherlands $5,000.

High Interest Rates

Switzerland is at the bottom of the list. The average household borrows, on average, only $800.

In terms of interest charges, Britain outstripped its European neighbors, with rates ranging from 12.5% to 500%, which is 485 percentage points above the current British prime rate. The highest rates were charged on small loans for short periods by "doorstep" salesmen working for finance companies, the council said.

Elsewhere in Europe, banks and credit suppliers are not allowed to assess more than a certain percentage about the prevailing prime rates.

Consumer interest rates in France last year were between 8% and 17.96%, in Germany between 9% and 25%, and in Holland between 9.5% and 18.8%.

More Information Urged

While half of Europe's 45 million credit cards are held by the British, the French are ahead in card use. A Frenchman charges goods or services five times a month on average, compared with a Britain's two times.

The National Consumer Council is calling for more information for Britain's consumers so they can compare lenders' rates, as well as for more money-advice centers and credit counselors. ☐

Banc One Shows Best Return on Assets Among Big Institutions

Continued from *page* **1**

benefited from the sale of its credit card portfolio last year, also was the best performer in return on equity among the 57 largest banking companies. Wells Fargo was the top superregional in return on equity in 1989. NCNB Corp., Charlotte, N.C., was second.

For the first time since the survey was begun in 1982, the market values of money-center bank stocks exceeded their book values last year.

In 1989, the median market-to-book ratio for the money-centers was 104.40%, indicating their stocks were selling for an average of 4.4% above book value. The average for 1988 was 93.34%, a discount to book averaging 6.66%.

57 Companies Covered

The *American Banker* performance survey covers 57 commercial bank holding companies with assets of $10 billion or more on Dec. 31. Data are supplied by SNL Securities, Hoboken, N.J. Tables begin on page 16.

The companies are reviewed within three peer groups: 11 money-center banks, 26 superregional banks, and 20 large regional companies with total assets of $10 billion to $20 billion.

Among other findings from the survey:

- First Chicago Corp. was the best-performing money-center bank during 1989, with a return on assets of 0.74% and a return on equity of 15.52%. Pittsburgh's Mellon Bank Corp. was second, returning 0.69% on assets and 14.09% on equity.
- The market's favorite money-centers last year were J.P. Morgan & Co. and Bankers Trust New York Corp. Morgan's 1989 market-to-book ratio was 202% - up from 114.27% the year before. Bankers Trust was second with a 157.4% ratio, up from 81.13% in 1988.

A Leader Falls

Republic New York Corp., the 1988 money-center peer group leader with a ratio of 115.32%, fell to third place despite a 26% gain in its ratio to 146.10%.

- Among the superregionals, the market's top choices were Banc One Corp. and NCNB Corp., with market-to-book ratios of 187.90% and 172.60%, respectively.
- CoreStates Financial Corp., Philadelphia, was second in return on assets with a ratio of 1.22%, and Northern Trust Corp., Chicago, was second in return on equity with a ratio of 23.79%. Further, Northern Trust was the market's favorite large regional with a market-to-book ratio of 201.9%.
- The worst performing money-center bank was Bankers Trust, with a negative return on assets of -1.62% and a negative return on equity of -31.58. These ratios include the third-quarter provisions for refinancing country credit losses of $1.65 billion.

Confidence Retained

Nevertheless, the market has expressed confidence in Bankers Trust's future, rating it just behind Morgan as its favorite money-center bank.

- The worst-performing superregional was Bank of New England Corp., Boston, with a negative return on assets of -3.48%. The bank experienced significant problems with its commercial real estate lending portfolio last year, took a $1.52 billion provision for credit losses in the fourth quarter and lost $1.11 billion last year.
- The worst-performing large regional was Valley National Corp., Phoenix. The bank, also suffering from a troubled real estate portfolio, lost $149.2 million last year.

Stock Prices Also Up

The improvement in the market to book ratio of the money centers cannot be completely accounted for by book-value erosion at some large banks last year. The stock market normally adjusts for such developments. In absolute terms, the prices of money-center stocks also turned in a good performance for the year.

"A third of it may be attributable to a feeling that the Third World debt situation is finally nearing resolution at big banks," said Mark Alpert, an analyst at Bear, Stearns & Co.

The rest, he said, may be the market's recognition that these institutions have built up large tax credits as reserves have been created, a positive future development for earnings.

* * *

Yesterday's Market

For the second day in a row, First Chicago Corp. stock was the biggest loser. The shares were down $1.125, to $32.875, late Thursday afternoon, after a $1.625 drop on Wednesday.

Overall, the stock market was stronger Thursday, with the Dow up slightly, although the performance of most bank stocks was mixed.

First Chicago's stock fell on Wednesday amid rumors of problems in real estate projects of Trammell Crow Co. involving First Chicago financing. The huge Dallas developer denied that any of its project are in serious jeopardy.

A spokesperson for the bank said Wednesday the bank knew of no reason for the activity, and said the bank had nothing to add to its previous statement.

But separately, First Chicago said on Thursday that its highly leveraged transactions in 1989 totaled $2.7 billion as defined under federal law, more than double its previous total under its own definition.

Shares of NCNB Corp., which were hit on Wednesday by the same Trammell Crow rumors, recovered ground on Thursday. In afternoon trading, they were up 62.5 cents to $40.875.

Among superregionals, the best performer was Banc One Corp., Columbus, Ohio, which appreciated 75 cents, reaching $29.25.

In the loser column, Barnett Banks, Jacksonville, Fla., was off 50 cents to $30.50 while Shawmut National Corp., Hartford, Conn., was off 50 cents, to $15. Both stocks have been hurt by investor jitters over regulatory examinations of their real estate portfolios.

Columbia Plan to Sell Junk a Big Gamble

Continued from *page* **1**

Corp. shortly after passage of the thrift-bailout law last year to find investors for an organization that would acquire the thrift's junk holdings. Mr. Harshfield said Columbia had stopped pursuing a "collateralized bond offering," in which securities are grouped according to risk, because the technique is "too complex," in favor of the new equity-and-debt structured transaction.

Analysts say that Columbia's maneuvering amounts to paper shuffling that will not be able to overcome the underlying reality that junk bonds have lost much of their value.

Columbia lost $226 million in the third quarter, largely because of writedowns on its junk holdings. The thrift has not released its end-of-the-year earnings statement. But it is certain to take additional writedowns and will likely fail two of three capital tests, while barely meeting standards for tangible capital.

Danger of Takeover

Any further erosion would put the thrift below minimum tangible capital requirements, making it ripe for federal takeover.

"They don't have just a regulatory gun to their heads," said Kenneth B. Funsten, credit analyst with Wedbush-Morgan Securities, Los Angeles. "They've got a gun, a cannon and, a bazooka."

Sources familiar with Columbia's plan said the Office of Thrift Supervision had been studying the proposal for selling the junk portfolio since mid-February, but has not given its approval.

By all accounts, finding an investor willing to buy the entire portfolio, even if only a 10% to 15% down payment were required, will not be easy. "I don't know who is big enough," Mr. Funsten said. Any deal will be complicated by the nature of the portfolio, which is believed to include a wide range of private-placement issues and other hard-to-sell instruments.

"It's not an easy deal to pull off," said one source familiar with the plan.

Columbia's efforts to sell its bonds contrasts with the Resolution Trust Corp.'s decision to keep its vast junk holdings. Debt analysts said it was too early to predict what effect putting $3.5 million worth of securities up for sale would have on the junk market as a whole. But they noted that a deal structured the way Columbia proposes would have less of an impact than a decision to dump the bonds on the open market. □

House Panel's Laundering Bill Would Let Treasury Set the Rules

Continued from *page* **1**

Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America, denounced the legislation, however, and said his organization would lobby against it.

"I'm concerned about the increased regulatory burden," he said. "This is overkill."

The draft legislation is on the fast track and is expected to win committee approval easily Tuesday. It faces favorable odds on the House floor as well.

A measure is in the works in the Senate, too, where Sen. John F. Kerry, D-Mass., is expected to soon introduce money-laundering legislation that could move as a free-standing bill. Or it could be attached to the crime bill being developed in the Senate.

"I think there's a 90% chance that some kind of money-laundering legislation will be enacted this year," Mr. Byrne said.

Legislation could affect a sizable number of transactions. In 1989, more than 96 million wire transfers were routed through the Federal Reserve's domestic network and the New York Clearing House's international system.

Aides to the chairman of the House Banking Committee, Henry B. Gonzalez, D-Tex., were scrambling Thursday to put the final touches on the draft legislation before the panel, and copies of it were not available. But sections of the bill obtained by American Banker indicated that Treasury is being given discretion in a number of areas.

For example, it had been expected that the bill would require reporting or record keeping on all transfers of $10,000 or more. The Gonzalez draft calls for record-keeping only and gives the Treasury discretion to set a threshold for which wire transfers must be documented.

However, the bill calls for detailed record-keeping. The information to be maintained includes:

- The name and address of the originator, plus any account numbers involved in the transaction.
- Identification of the institution receiving the transfer, plus the name, address, and account number of the beneficiary.
- The name, address, and account number "of any person on whose behalf the funds are transferred or received, and any other person who is directly or indirectly involved in originating or receiving the transfer."
- Information about payment orders received that directed a transfer of funds, including data about the originator, the beneficiary, and any other people directly or indirectly involved.

Mr. Byrne of the ABA said it may be impossible to find out about individuals indirectly involved in transactions. For example, if money is wired overseas and passed through a number of accounts before reaching the ultimate beneficiary, it may not be possible to determine who ends up with the funds.

As a practical matter, the Treasury is already at work on regulations requiring increased record-keeping for international wire transfers and would be ready to issue regulations quickly. □

Data Sources: Data were supplied by **SNL Securities, Hoboken, N.J.**, unless otherwise noted. The rankings, means and medians were compiled by the **American Banker.** Please note that the 1988 data are as reported in 1989 and have not been restated for mergers or changes in accounting practices. ([1])— Calculated by **American Banker** and is based on net income excluding the utilization of tax loss carryforward. ([2])— Based on data provided by the bank to **American Banker**. ([3])— Includes gain on sale of credit card portfolio. ([4])— Bank was in the "Large Regionals" panel last year. (★)— Percentage gain is greater than 40,000%. **Definitions and methodology**: For a complete description of the information contained in this table, see the footnotes on page 18. **Dashes** (–) in the 1988 rank field indicate that the bank was not a member of panel that year. **NA**— Not available. **NM**— Not meaningful.

Source of Asset Data: American Banker survey of the top 100 bank holding companies scheduled for publication on April 11.

Money Center banking companies: are banks that are large in asset size; oriented toward commercial and industrial lending with a proclivity to sell a high amount of their C&I originations; noncore funded (a high percentage of purchased money); and a large international presence.

Superregional banking companies: are non-money center banking companies with $20 billion or more in total assets on Dec. 31, 1989, that has merged across state lines to establish a full commercial banking presence in another state.

Large regional banking companies: the next 20 largest bank holding companies in the U.S. on Dec. 31, 1989 (assets between $10 billion and $20 billion.)

N.A.— Not available. **N.M.**— Not meaningful.

Definitions and Methodology

The statistical tables for the **American Banker's** annual performance study were compiled by the **American Banker** from data provided by **SNL Securities, Hoboken, N.J.** The data were taken from two sources: (1) the **SNL Bank DataSource,** which contains GAAP financials on market and per share data on all publicly traded commercial banks and bank holding companies; and (2) the **SNL Bank Securities Monthly,** which contains the stock price information needed for this survey.

A listing of the 57 banking companies in the study appears above. The companies are divided into three peer groups: peer group 1 — 11 money center banks (defined above); peer group 2 — 26 superregional banking firms (defined above); and peer group 3 — 20 bank holding companies with assets of between $10 billion and $20 billion on Dec. 31, 1989. In the table above, entitled **Performance Study Peer Groups**, the companies are listed in order of their asset size on December 31, 1989, within their respective peer group. Banks that are not owned by holding companies are excluded from the survey.

In the table appearing on page 16, within peer groups the banks are ranked by three measures of performance: the return on average assets; the return on average equity; and the percentage change in earnings per share. **Dashes** (–) in the 1988 rank field indicate that the bank was not a member of panel that year.

Net income is income after taxes but before extraordinary items for the full year 1989. **Please note:** American Banker has excluded the extraordinary credit resulting from the utilization of tax loss carryforward from 1988 and 1989 net income, whenever possible. The banks affected are footnoted.

The return on average assets, as defined by SNL Securities, is net income divided by average assets for the period.

The return on average (common) equity is net income minus preferred stock dividends divided by average common shareholders' equity for the year.

The percentage change in earnings per share where calculated by American Banker from SNL Securities' data. These data are the actual fully diluted earnings per share before extraordinary items for 1987, 1988, and 1989. In calculating percent changes involving negative numbers, American Banker considers the movement from a negative amount to zero, or from zero to a negative amount, as a change of 100%.

Market-to-book value for 1989 is the stock price on December 29, 1989 divided by the book value per share on December 31, 1989. The market-to-book value for 1988 is calculated by dividing the stock price on December 30, 1988, by book value per share on December 31, 1988.

The price earnings multiple is the stock price, as defined above, as a multiple of fully diluted earnings per share.

The dividend yield for 1989 is the indicated annual dividend for the fourth quarter of 1989 as an annualized percentage of the December 29, 1989 price. The dividend yield for 1988 is the indicated annual dividend for the fourth quarter of 1988 as an annualized percentage of the December 31, 1988 price.

The group **means** are calculated by American Banker by summing all of the values and dividing that number by the total number of observations. The **median** is obtained by finding the midpoint of the array of values. The 1988 means and medians were for the banks in the panel that year. **Copyright American Banker, 1990.**

Chase Limiting Retail Ambition To Northeast

By YVETTE D. KANTROW

NEW YORK — In a move typical of the changing meaning of "nationwide banking," Chase Manhattan Corp. is scaling back its retail ambitions to concentrate on the northeastern region bounded by Ohio on the west and Maryland to the south.

The parent of Chase Manhattan Bank, which once had aspirations of serving the mass market across the country, will limit its nationwide consumer efforts to private banking, investment products, credit cards, and other services it can sell without buying up other banks.

ANALYSIS: *Follow-up on the news*

Chase officials said the more limited focus will help differentiate it from money-center competitors with national ambitions. But in fact, many banks that had once looked beyond their historical boundaries are now reconsidering that strategy and focusing instead on better-defined, targeted regions.

To be sure, many financial institutions are still expansion minded.

Citicorp, Security Pacific

Citicorp, for example, makes no bones about its aspirations to become a mass-market bank of truly nationwide scope. And among the California banking companies, Security Pacific Corp. remains committed to a nationwide network of subsidiaries and affiliates in preparation for a further erosion of legal barriers to interstate banking.

But depressed earnings and expanding capital needs are forcing many retail bankers to chart a different, more conservative and profit-oriented course. They view First Interstate Bancorp, Los Angeles, as a cautionary example: It has operated throughout the West for many years, but its acquisition of a troubled Texas bank in 1987 set off a severe decline in companywide earnings.

"Superior returns in attractive markets – that's our theme," Arthur F. Ryan, a Chase vice chairman, said last week in a presentation to security analysts. "We believe our New York State franchise is expandable but not universally."

Expanding in the 1980s

In the 1980s, Chase gobbled up both banks and thrifts, some of them ailing, in Ohio, Maryland, Arizona, and Florida.

Today, Chase admits that its foray into Arizona – where a real estate downturn also hurt Citicorp, First Interstate, and others

Dutch Banks Aim to Form Global Giant

By JOHN EVANS

LONDON — The two largest banks in the Netherlands, Amsterdam-Rotterdam Bank NV and Algemene Bank Nederland NV, announced Monday the start of negotiations for a merger that would result in Europe's seventh-largest bank and one of the top 30 worldwide.

Their announcement triggered immediate industry speculation that further big banking combinations would emerge across Europe as banks seek greater weight to compete in the single financial market that the European Community is due to implement at the end of 1992.

The Dutch banks made it clear that the proposed merger was aimed at speeding their global expansion, including within the EC, as well as defending their domestic market position.

"You need a strong capitalization if you want to be a global player from a small market like the Dutch," said ABN chairman Robert Hazelhoff.

ABN bought Exchange Bancorp of Chicago last year for

Thrifts Lose $19 Billion In Worst Year Ever

By BILL ATKINSON

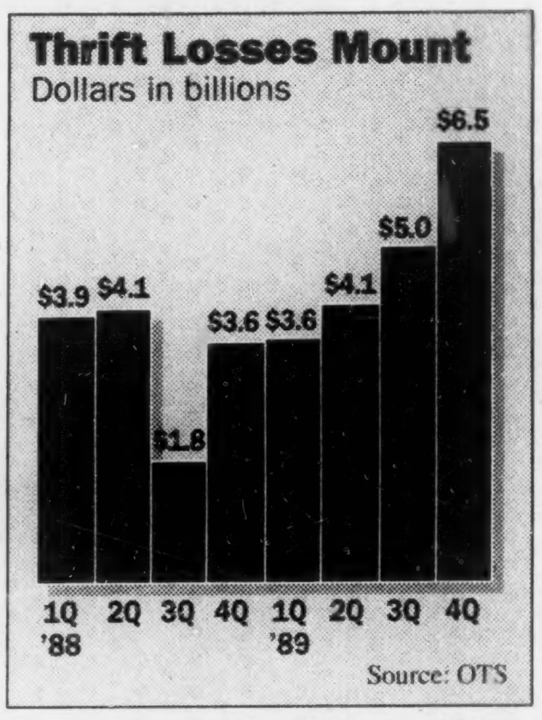
WASHINGTON — Savings and loans lost a record $19.2 billion in 1989 and observers warn the trend will continue if the hundreds of remaining insolvent institutions are not closed or sold off quickly.

Last year's loss, up 43% over the $13.4 billion loss in 1988 and 146% over $7.8 billion lost in 1987, reflects the huge write-offs of real estate assets as well as accounting changes called for in the 1989 thrift-bailout bill. The loss in the fourth quarter was $6.49 billion, the worst quarter in the industry's history.

As a sign of thrifts' weak profitability, the 1,812 profitable thrifts, out of a total of 2,597 institutions, earned only $1.3 billion in the fourth quarter, according to data released by the Office of Thrift Supervision.

Timing Is Crucial

Analysts say future profits or losses hinge on the RTC's ability to quickly clean up problem cases. At the end of the year, 281 thrifts were placed into the conservatorship. Those institutions posted a $4.4 billion loss for the fourth quarter. Another 204 institutions, which were not yet in conservatorship but headed that way at yearend, lost nearly $3.4 billion in the final three months of the year.



Source: OTS

"I would presume by this time next year . . . the industry would be smaller and the losses would be smaller," said James Freund, acting chief economist for the Office of Thrift Supervision.

But other industry followers disagree, holding that the key to halting the flow of red ink is to clean up zombie S&Ls that continue to operate and take deposits.

"I don't think we have reached the pinnacle until all the institutions that need to be addressed are removed from the

AT&T Credit Card: No Annual Fee, Discount on Long-Distance Calls

By YVETTE D. KANTROW

NEW YORK — Ending months of speculation about its plan to launch a general-purpose credit card, American Telephone and Telegraph Co. unveiled on Monday the AT&T Universal Card, combining a long-distance calling card and MasterCard or Visa.

AT&T will underprice its bank-card competitors by not charging an annual fee. AT&T said it will consider imposing annual fees after evaluating the first year's experience, but people who sign up during the first year will never be charged a fee if they use the card at least once a year.

The interest rate on outstanding balances will be the prime rate plus 8.9 percentage points, or 18.9% to start, which is about the national average for bank credit cards.

Discount on Calls

Cardholders will get a 10% discount on long-distance calls charged to the Universal Card. Like bank gold cards, AT&T's product also comes with buyer-protection insurance and collision-damage reimbursements on car rentals.

AT&T
Universal
VISA

AT&T'S OFFERING: Company will offer MasterCard or Visa with long-distance charge card.

Bank credit card executives expressed little concern in recent months about competition from AT&T. The telecommunications giant's advertising pitch, however, is aimed at cutting into the banks' MasterCard and Visa market.

Television commercials that debuted during the Academy Awards telecast Monday night depicted the Universal Card as the only one that consumers need, and highlighted the no-fee offer among other features. The spots ended with the tag line, "One world, one card."

Simplicity Sought

"Consumers have told us they are tired of complexity and tired of annual fees," Paul G. Kahn,

Citicorp Makes King of the Hill As Card Issuer

NEW YORK — Citicorp has vaulted past American Express to become the largest international issuer of credit and charge cards, according to yearend data published by the companies.

Citicorp's 35 million MasterCard, Visa, and Diners Club cards also outnumber Sears' Discover cards, giving the New York banking company a numerical edge over another of its primary competitors.

While Citicorp has long led U.S. banks in MasterCard and Visa issuance, it now lays claim to an international leadership position, with cards a linchpin of its global consumer banking strategy.

American Express Travel Related Services Co. said it had issued 34 million green, gold, platinum, and Optima cards worldwide at the end of 1989.

Greenwood Trust Co., the subsidiary of Sears, Roebuck and Co. responsible for the Discover program, was close behind with a reported 32.8 million cards at yearend.

Sears was in the elite of card-issuers even before its introduc-

Southeast Chief Sees Realty Woes As Pothole in the Road to a Boom

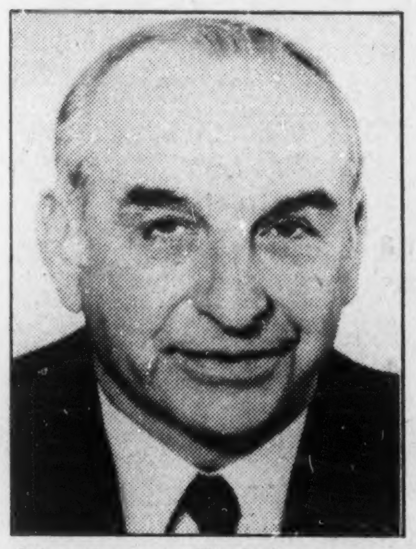
By TOM LEANDER

To veterans of Capitol Hill, the name Charles J. Zwick may evoke an image of fiscal stability. As President Lyndon B. Johnson's budget director in 1968, Mr. Zwick produced a balanced budget. No one else has done that since.

But that was a generation ago, and, now, as chairman of Southeast Banking Corp. in Florida, Mr. Zwick has fiscal woes familiar to many East Coast bankers: a rocky real estate portfolio.

Southeast Banking said Friday it expected to lose $53 million to $57 million in the first quarter, largely because of its Florida real estate lending.

But the 63-year-old Mr. Zwick, a perennial Florida booster, thinks his bank's current problems are only a pothole on the road to an economic boom.



Charles J. Zwick

"The Florida market is cyclical – this is the third cycle since the mid-seventies," he says. "The worst one was in the '74 to '76 period, when the price of oil went down."

He predicts that the regional troubles assailing the bank will result in "an intermediate-level slowdown," one in which Southeast will easily survive – unless the U.S. economy is mired in recession.

Mr. Zwick, who became president of the bank in 1969 and chairman in 1982, has staked his bank's future on expansion within the Sunshine State.

The bank has built its franchise in Florida alone and avoided jumping into the interstate game in an era when Citicorp , Chase Manhattan Corp., and NCNB Corp. have set up Florida operations. So far, his $16.5 billion-asset company has produced disappointing results.

Some analysts said that Mr. Zwick's Florida-based strategy had exposed his bank to real estate woes more than any other Southeast bank.

"Analysts are interesting people," he says, with a wry note in his voice, "I've seen some of their comments, and I don't know where they get that from."

Last Friday, analysts expressed relief that Southeast's loan problems were not as grave as had been rumored.

If Mr. Zwick takes such speculation in stride, it is because he is used to facing a problem by adopting the long view. A native of rural Connecticut, Mr. Zwick is the son of a farmer who eventually gave up tilling the Connecticut soil in part because Florida farmers were putting up such stiff competition.

He stayed close to roots even as a student, earning a bachelor's and master's degree in agricultural economics at the University of Hartford. He earned a doctorate in economics at Harvard.

He taught economics first at the University of Connecticut and then at Harvard between 1954 and 1956. For the next 10 years, Mr. Zwick lent his brains to the Rand Corp., a prestigious California think tank, puzzling over such imponderables as urban transportation and the economies of Southeast Asia.

He was tapped by the Johnson Administration to become assistant director of the Bureau of the Budget in 1965, and named as director in 1968.

Though loaded down with academic credentials and intellectual honors – for example, he is chairman of the Carnegie Endowment for International Peace – Mr. Zwick avoids academic hyperbole in conversation. Rather, his voice conveys the no-nonsense tone of a seasoned Washington bureaucrat fielding questions from errant Congressmen.

"I say only partly in jest that my experience as military policeman helped shape me as a banker," he said. "I learned the amount of law and order and discipline it takes to get a job done."

An avid reader, Mr. Zwick says he spends his leisure hours playing golf and poring over books on global trends. ☐

Franklin S&L Challenges Takeover

Reuters

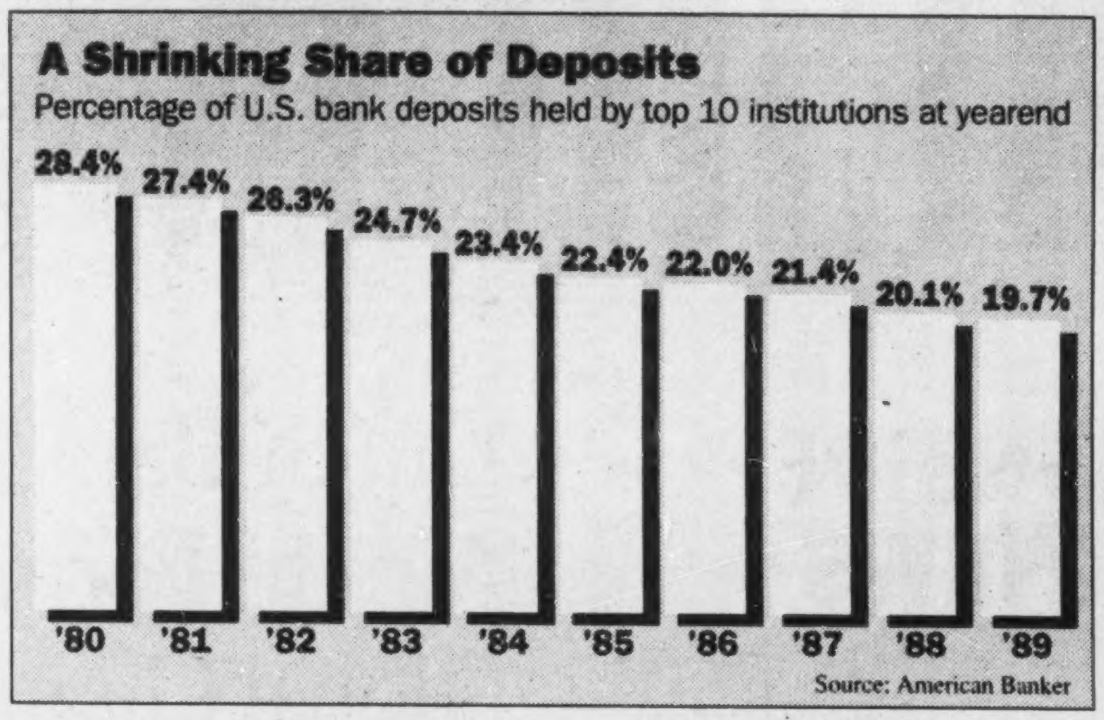
PORTLAND, Ore. — The former board of directors of Benjamin Franklin Federal Savings and Loan Association said it has sued the Office of Thrift Supervision, challenging the government takeover on Feb. 21 and asking the court to return control to the board.

"We feel we have been unfairly treated," former chairman G. Dale Weight told a press conference after the suit was filed in U.S. district court here.

The $5.4 billion-asset institution was taken over by federal regulators because it failed to meet capital requirements under the 1989 thrift-bailout bill.

Much of the Franklin suit hinges on arguments advanced in a suit filed by Olympic Federal Savings and Loan of Berwyn, Ill., Mr. Weight said. The Olympic lawsuit questioned the constitutional authority of the former and current acting directors of the OTS.

A federal judge blocked the seizure of Olympic by the OTS last Wednesday. But an appeals court granted a government request to prevent the lower court injunction from taking effect and will hear further arguments April 11. ☐



A Shrinking Share of Deposits
Percentage of U.S. bank deposits held by top 10 institutions at yearend

Source: American Banker

Deposit Share Continues To Slide at Top 10 Banks

By L. MICHAEL CACACE

NEW YORK — The share of deposits held by the nation's 10 largest banks continued a decade-long decline last year, according to an annual *American Banker* survey.

The share of deposits fell to 19.7% on Dec. 31, 1989, from the previous record low of 20% the year before. It marked the 10th year in a row that share has fallen, from a peak of 28.5% in 1979. (Tables ranking the 300 largest banks by deposits and by assets begin on page 14A.)

Less Emphasis on Growth

Analysts said the decline reflects the fact that large banks no longer consider asset and deposit growth as desirable, unless profits grow accordingly. In addition, many large banks have reduced assets and deposits to meet tougher capital requirements. Other factors included strategic decisions to exit lines of business, and the securitization of assets.

"These trends are still in evidence and should continue in 1990," said James McDermott, an analyst at Keefe Bruyette & Woods Inc., New York.

The survey found that while deposits in the rest of the industry increased 5.2%, they rose just 3.1% at the top 10 banks. In 1988, the top 10 had a 2.4% drop, compared with a 5.5% increase at other institutions.

Four of the top 10 banks posted deposit declines last year. Tenth-ranked Bankers Trust Co. had a 16% decline; fifth-ranked Morgan Guaranty Trust Co. had a 10% drop; ninth-ranked Chemical Bank's deposits fell 3%; and fourth-ranked Manufacturers Hanover Trust Co. had a 0.3% decline.

Equity Capital Down

Equity capital at the top 10 banks fell 4.1%, to $32.7 billion, from $34.1 billion a year earlier. The decline was attributable to the special provisions taken in the third and fourth quarters for LDC debt. The decline in equity, coupled with a 3.7% growth in assets at the top 10, caused their equity-capital-to-assets ratio to fall 40 basis points last year to 4.70% from 5.10%.

For the banks ranked 11 to 300, equity capital rose 5.9% and assets rose 7.4%. The equity capital ratio was 5.64% on Dec. 31.

Bank of New York was the only newcomer to the top 10, propelled to the eighth spot by its acquisition of $15 billion-deposit Irving Trust Co.

The largest deposit decline was posted by 41st-ranked Boston Safe Deposit and Trust Co., which is shrinking after a decline in profitability in 1988 and 1989. Its deposits fell 50% last year, to $7.8 billion. ☐

Centrust Failure Expected to Cost U.S. $2 Billion

By ROBERT M. GARSSON

WASHINGTON — Regulators now expect the collapse of Centrust Bank to cost the government at least $2 billion, up to $1 billion more than previously expected.

The new estimate puts the Miami-based thrift in contention with Lincoln Savings and Loan Association as the nation's most costly thrift failure.

The estimate was delivered to the House Banking Committee by officials from the Resolution Trust Corp., who described Centrust as a poorly managed investment bank that funded itself with federal deposit insurance. The $8.2 billion-asset thrift was seized by federal regulators on Feb. 2.

Committee aides said the estimated cost to the government was $500 million to $1 billion more than they expected.

Banking Committee Chairman Henry B. Gonzalez, D-Tex., said the revelations about Centrust and Lincoln, which is expected to cost the government $2 billion or more, suggest the need for a major overhaul of the laws and regulations governing the banking and thrift industries, as well as those of the accounting profession.

"I am more bothered now than I was a year ago," when the committee was preparing to take up the thrift bailout law, he said.

Multiple Accounts

Mr. Gonzalez said afterward he plans to introduce legislation later this spring. His primary focus will be on ensuring that individuals are not able to obtain more than $100,000 in deposit insurance coverage by dividing their deposits among more than one insured institution.

In an indication that he wants the committee to begin considering an overhaul of the deposit insurance laws this year or early

COMMENT/*By Sanford Rose*

The Reforms We Really Need

The Treasury Department will shortly discharge its responsibilities under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 to recommend changes in the system of deposit insurance. Surely changes are long overdue.

But it is far too simplistic to argue, as do some, that deposit insurance reform will greatly reduce the likelihood of bank and thrift failures. Insurance reform is necessary; it is by no means necessary and sufficient. It does not attack the underlying cause of management behavior that leads to failure.

There is always the danger, moreover, that we will get the wrong sort of insurance changes. Schemes to lower the insurance maximum from $100,000, for example, are apt to do more harm than good.

Such measures are designed to force the depositor to "discipline" his bank and thereby help prevent its failure. But this makes precious little sense. The depositor with a balance of less than $100,000 cannot in general monitor his bank's risk-taking tendencies with much efficiency.

And even if he could, one shouldn't want him to do so. Every time a bank or thrift was mentioned adversely in the newspapers, depositors who thought they might suffer losses would rush to transfer money to other institutions. This continuous migration of deposit balances is bound to prove counterproductive.

Although it has been shown that deposit runs are not as costly as many believe, neither are they costless.

The way to improve the system is not by fiddling with the amount of insurance but rather by changing the method by which it is priced. As is well known, banks and thrifts pay flat-rate premiums. As is also well known, this practice amounts to a subsidy from the risk-averse to the risk-prone.

Is the Treasury going to recommend that premiums for deposit insurance be henceforth graduated according to institutional risk?

And if it is, will it also suggest a practical and objective method of achieving that graduation – a problem that has thus far confounded those who are longtime advocates of risk-related charges?

If the Treasury comes up with a viable method of modernizing deposit insurance, we should all be properly grateful. But we need more than this to stabilize the financial system. After all, flat-rate insurance has been with us for over half a century, but it is only in the last decade that droves of banks and thrifts have begun to fail. If flat-rate insurance promotes the kind of risk taking that leads to widespread failure, why weren't failure rates higher in the past?

Crumbling Charter Values

The reason, quite simply, is that the value of bank and thrift charters was greater in the past, and valuable charters will induce managements to operate prudently, despite the incentives for outsize risk-taking inherent in a flawed insurance system.

In the past decade, the charter values of banks and thrifts have been significantly depressed by heightened competitive pressures. The inroads of competitors into geographic areas hitherto protected by restrictions on branching and on interstate banking – or, in many cases, the mere threat of such inroads – have forced banks to raise deposit rates and lower loan rates, undermining the worth of their franchises.

The thrifts, which once were practically the only institutions willing to hold home mortgages to term, have had their "warehousing" monopoly destroyed by the market for mortgage-backed securities. The securitization movement greatly increased the public's demand for mortgage paper. And as this demand burgeoned, the price of mortgages rose and their yields concomitantly fell.

A much-overlooked cause of thrift woes is very simply a decline in home-mortgage rates, relative, that is, to other open-market rates.

Given the erosion of their franchise values, many banks and thrifts have had little to lose from unconscionable gambling in the credit markets or from playing the yield curve with even greater abandon than before. So the cause of the rash of bank and thrift failures is not just a faulty deposit-insurance system. The cause is a decline in charter values that encouraged desperate managers to exploit the weaknesses of that system.

'We must tear down barriers that artificially delimit and demarcate the financial-services industry.'

Exacerbating the Problem

If the cause of the problem is not deposit insurance per se, the remedy cannot be simply an overhaul of the insurance system, however desirable that may be. To arrest the tendency of institutions to fail, government must look to ways to help them rebuild shattered franchise values. Yet the government is doing just the opposite. It is, for example, contributing to a situation that will promote more, not fewer, thrift failures.

With the decline in relative mortgage rates, the true yield earned on new home mortgages is now less than the marginal cost of funding these mortgages. Yet FIRREA mandates that qualified thrift lenders hold an even higher percentage of their assets in home mortgages than was previously the case.

In other words, Congress is forcing the thrifts to engage in activities that will produce more red ink. Locked into a money-losing business, thrifts will inevitably continue to gravitate to highly risky undertakings in an effort to offset losses in their core activity.

This kind of nonsense has to stop. Thrifts can do everything that the public should legitimately require of them. They can originate and service home mortgages, and do so profitably. What they can't do profitably – and what Congress has perverse-

CRIME BLOTTER/*By Tom Leander*

Appraiser Admits Inflating Estimate

A real estate appraiser has pleaded guilty to preparing an inflated report in connection with loans that allegedly led to the insolvency of Midwest Federal Savings and Loan, the U.S. Attorney's office in Minneapolis said.

Peter P. Jackson entered the guilty plea before Judge Paul A. Magnuson in U.S. district court in St. Paul on March 16.

Mr. Jackson, a New York City resident, was cited in an indictment that also named Susan Greenwood Olson, a former vice president of the thrift.

The government says Ms. Greenwood Olson withheld an appraisal from the Federal Home Loan Bank Board that put a Miami resort's value at $9.7 million while she arranged for Mr. Jackson to appraise it at about $22 million. Midwest Federal had lent the resort more than $23 million.

A spokeswoman for the U.S. Attorney's office said Mr. Jackson agreed to cooperate with the continuing investigation as part of his plea agreement.

Harold W. Greenwood Jr., Ms. Greenwood Olson's father and chairman of the thrift until it was seized in February 1989, is still under investigation.

Mark W. Peterson, a lawyer for Ms. Greenwood Olson, said that the charges against her resulted from loans that went bad and that she exercised no criminal intent.

— **Nanine Alexander**

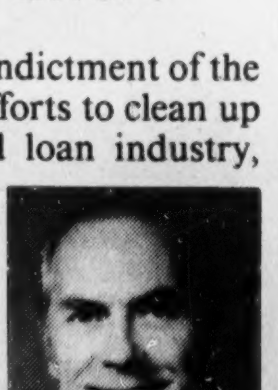
Barnard Blasts Antifraud Effort

In a stinging indictment of the government's efforts to clean up the savings and loan industry, Rep. Doug Barnard Jr., D-Ga., criticized the Bush administration's decision to spend only $50 million to investigate S&L fraud, instead of allocating the $75 million mandated by Congress under the thrift-bailout law.



Rep. Doug Barnard

"This question of spending another $25 million must be weighed against the hundreds of billions of dollars that the S&L debacle will cost the taxpayers," Mr. Barnard said at a hearing of the consumer affairs subcommittee of the House Government Operations Committee.

Mr. Barnard said the lack of funding has meant that 1,298 cases involving fraud and embezzlement of amounts exceeding $100,000 are inactive because the Justice Department lacks personnel to carry out the investigations.

Justice Department spokesman Douglas Tillett responded by saying that $50 million was handed over to the department in December, "and since then we've put every nickel into the field." He also said it was "a little naive" for Mr. Barnard to expect a significant number of arrests by March.

Businessmen Plead Guilty in Jersey Scam

The former chairman and president of a discount apparel chain have pleaded guilty to falsifying company financial statements in 1985 and 1986 in a scheme that helped the now-bankrupt company obtain - a $2.95 million loan from Midlantic National Bank and a $1.5 million loan from Manufacturers Hanover Trust Corp.

Oliver's Stores Inc., which operated in New York, New Jersey, and Connecticut, also used the falsified information to help raise $7.8 million in an initial public offering, according to U.S. Attorney Samuel A. Alito in Newark, N.J.

Joseph Wolfer, the 47-year-old former chairman, and Thomas Nadler, 44, the former president, admitted creating false invoices and bills of lading. In doing so, they made it appear that another apparel company, Maspeth Industries, had made a job-lot purchase of $506,525 of inventory in June 1985 and $183,250 in February 1986.

The duo gave their own money to employees to purchase cashier's checks, which were then deposited and credited to Oliver's books. This gave the appearance that Maspeth Industries, which is based in Maspeth, N.Y., had made payments against the accounts receivable.

According to Mr. Alito, the president of Maspeth signed a false confirmation for Oliver's auditors indicating that the sale had actually taken place.

Neither Maspeth Industries, which is now defunct, nor its employees has been charged with any crime, Mr. Alito said.☐

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1989, and various state banking departments. Deposits for 1989 may not be comparable with deposits reported for 1988 and 1985 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **(a)**— Bank was formed on 3/29/89, as a bridge bank via various agreements with the FDIC. Data for prior periods are for the former MBank Dallas NA, the largest of the 20 MCorp bank affiliates merged to form the bank. N.A.— Not available.

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1989, and various state banking departments. Deposits for 1989 may not be comparable with deposits reported for 1988 and 1985 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **N.A.**— Not available. **(a)**— Bank was formed by the FDIC on 7/21/89, as a bridge bank. Data for prior periods are for the former Texas American Bank/Fort Worth NA, the largest of the 24 Texas American Bancshares bank affiliates merged to form the bank. **(b)**— On Jan. 1, 1990, the bank merged eight affiliate banks of its parent, First American Corp. **(s)**— Data for Dec. 31, 1989, were not available. Therefore, Sept. 30, 1989 data were used. **N.A.**— Not available.

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1989, and various state banking departments. Deposits for 1989 may not be comparable with deposits reported for 1988 and 1985 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **N.A.**— Not available. **(a)**— Bank was merged into Bank of New England NA, Boston, on Feb. 9, 1990. **(s)**— Data for Dec. 31, 1989, were not available. Therefore, Sept. 30, 1989 data were used. **N.A.**— Not available.

Data Sources: American Banker questionnaire, Federal regulatory report of condition for December 31, 1989, and various state banking departments. Assets for 1989 may not be comparable with assets reported for 1988 because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **(a)**— Bank was formed on 3/29/89, as a bridge bank via various agreements with the FDIC. Data for prior periods are for the former MBank Dallas NA, the largest of the 20 MCorp bank affiliates merged to form the bank. N.A.— Not available. **(s)**— Data for Dec. 31, 1989, were not available. Therefore, Sept. 30, 1989 data were used.

Data Sources: American Banker questionnaire, Federal regulatory report of condition for December 31, 1989, and various state banking departments. Assets for 1989 may not be comparable with assets reported for 1988 because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **(a)**— Bank was formed by the FDIC on 7/21/89, as a bridge bank. Data for prior periods are for the former Texas American Bank/Fort Worth NA, the largest of the 24 Texas American Bancshares bank affiliates merged to form the bank. **(b)**— On Jan. 1, 1990, the bank merged eight affiliate banks of its parent, First American Corp. **(s)**— Data for Dec. 31, 1989, were not available. Therefore, Sept. 30, 1989 data were used.

Table Explained: American Banker follows the bank of charter when banks merge. The surviving bank is the bank whose charter has survived the merger. **Deposits Acquired**: These are the combined total deposits of the banks acquired through merger in the respective states. In calculating the deposits acquired through merger, the most recently available data for the acquired banks are used. When two affiliated banks of a holding company merge under the charter of the smaller bank, American Banker counts the deposits of the smaller bank, to avoid overstating the impact of internal mergers.

Skeptics Caution Against Insuring Check Purchases

By SAM ZUCKERMAN

SAN FRANCISCO — As U.S. banks and thrifts rush to offer checking accounts that insure customer purchases, some industry executives are warning that bankers do not fully understand the strategic implications.

These skeptics say programs that provide casualty insurance and extended warranty protections on purchases made with checks merely add to a bank's costs. If such insurance becomes a common checking-account feature, as it has in the credit card industry, it may fail to accomplish the original purpose of distinguishing one bank's services from competitors'.

ANALYSIS: *Follow-up on the news*

"What is going to be the benefit? None. Just higher expenses," grumbled James R. Gibson, vice chairman and retail banking chief at Union Bank, San Francisco, the fifth-largest in California.

Will Customers Change Banks?

"The biggest question mark is whether these programs will drive customers to take their money out of one bank and go across the street to another bank that offers the service," said Dennis Propp, president of Propco Financial Marketing, Chicago, one of several firms marketing check-insurance packages. "The fact is, we just don't know."

Mr. Propp acknowledged that competitors could easily match the service, but he said there may be "value to being first in the market."

In January, Valley National Bank of Arizona, Phoenix, a subsidiary of Valley National Corp., became the first to introduce product insurance and extended warranty protection for checking-account customers.

But disclosures this week that the nation's three largest commercial banks - Citicorp's Citibank, the flagship subsidiary of Chase Manhattan Corp., and BankAmerica Corporation's Bank of America - will offer such packages is evidence of a bandwagon effect that some retail bankers find hard to resist. (Dime Savings Bank of New York will jump on it next week. See page 6.)

Pressure Can't Be Ignored

Even doubters like Mr. Gibson said that, in the increasingly cutthroat retail environment, it may be impossible to ignore pressures to offer buyer protection packages. Despite his reservations, Union Bank will soon

BEHIND CLOSED DOORS: FDIC Chairman L. William Seidman aims to end the feud between credit unions and banks by mediating a face-to-face meeting with industry representatives.

Seidman to Mediate War of Words Between Credit Unions and Banks

By BILL ATKINSON

WASHINGTON — Seeking to put an end to an escalating war of words between credit unions and banks, regulator L. William Seidman will meet behind closed doors today with representatives of the two industries.

Regulators fear the sniping between the two industries will undermine public confidence in each side's deposit insurance fund. By sitting the rivals face-to-face, regulators hope they will agree to stop the feud.

Mr. Seidman, who is chairman of the Federal Deposit Insurance Corp. and the Resolution Trust Corp., recently agreed to act as mediator. The meeting will be held in Mr. Seidman's office.

Along with Roger W. Jepsen, chairman of the National Credit Union Administration, scheduled to attend are top officers of

Shareholder Resistance Blocks Sale Of Crossland

By ELLEN MEMMELAAR

NEW YORK — Citing objections from shareholders, Crossland Savings Bank said on Wednesday that it has terminated negotiations to get a $150 million capital infusion from a company affiliated with the Pritzker family of Chicago.

The $14 billion-asset Crossland, the largest thrift in New York City, had announced a tentative agreement in January to sell a controlling interest to Coast-to-Coast Financial Corp., whose owners include the Pritzkers and New York real estate investor Alvin Dworman.

The transaction would have given Coast-to-Coast 85% of Crossland's common stock. Existing shareholders' control would have been reduced to 15%.

"Shareholders weren't very enamored with the transaction," conceded Peter Cunningham, senior vice president at Cross-

Agencies End Ban On Accountants They Are Suing

By BARBARA A. REHM

WASHINGTON — Federal regulators have lifted a ban that prevented the Resolution Trust Corp. and the Federal Deposit Insurance Corp. from using accounting firms being sued by the government.

The change of heart stems from the agencies' high demand for auditing and asset valuation services provided by the nation's largest accounting firms - even though the government claims in numerous lawsuits that shoddy audits by many of these same firms resulted in massive losses at troubled financial institutions.

How to Get a Waiver

The new policy, approved by both agencies Tuesday, specifies how firms can get a waiver from the ban. They must prove that they have identified employees involved in the work that prompted the lawsuit and demonstrate that these people will not work on the contract.

"We're pleased that they've changed their policy," said J.A. Peers, a partner in Chicago with Ernst & Young, one of the firms sued by the federal agencies.

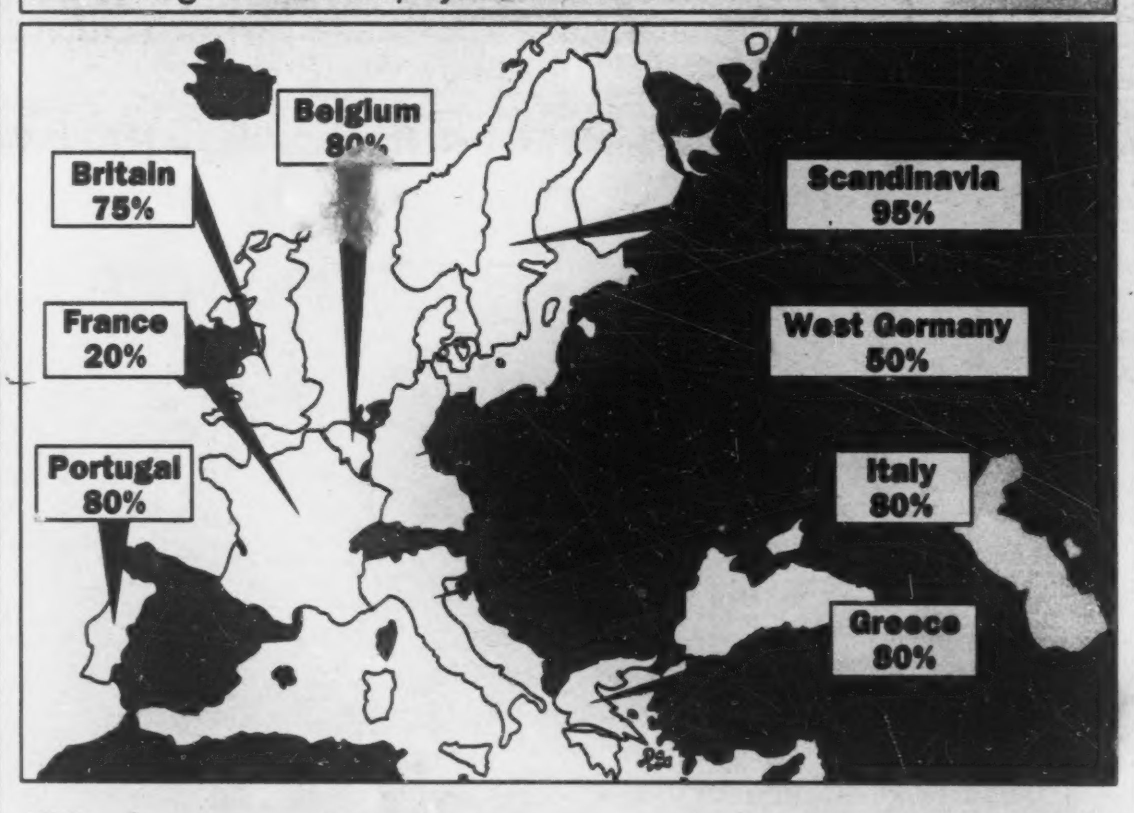
Why Unions Have Clout at European Banks
Percentage of bank employees in unions



Unions at European Banks Build Network to Strike Across Borders

By JOHN EVANS

LONDON — Labor unions at Europe's big multinational banks, worried about layoffs because of mergers and cost controls, are preparing for strikes and other actions that reach across national borders.

As a result, banks involved in labor disputes face the prospect of simultaneous strikes at home and in their offices in other countries. They may also be hampered in shifting their transactions to banks in other countries, say senior union officials in Europe.

In recent months, labor unrest has stepped up in a number of countries, including two bitter monthlong strikes and lockouts at banks in Sweden and Finland. While disputes have been centered on pay, underlying these confrontations are employees' fears of deep layoffs as banks seek cost-cutting measures, say industry analysts.

Dutch Layoffs Likely

Just this week, the two largest Dutch banks announced they were planning a merger to im-

COMMENT/*By Henry S. Peltz*

Examiners May Be Erring On the Side of Cautiousness

Managers, accountants, and regulators are well advised to be cautious with regard to property valuations and estimates of future performance of real estate loans in the current slow enviornment.

For example, if loan files lack adequate documentation or appraisals, the underlying loans probably should be classified as substandard, doubtful, or even loss (and companies should disclose them as nonperforming), even if they are current on debt service payments.

In other situations, however, we suspect that the regulators are being overly cautious and that the resulting adverse effects on financial services companies are likely to prove counterproductive.

Diverging from Prior Standards

Some have characterized this caution as an overreaction by examiners in suggesting (requiring?) sharp increases in capitalization and discount rates and other valuation mechanisms that are considerably higher than those previously sanctioned by appraisers and accountants. The impact of this has been to force the classification of performing assets as nonperforming.

For some thrifts and banks, loan-loss reserves have had to be increased, and loans or real estate written down. Furthermore, income statements have been hit with interest reversals, and the capital positions of some companies have been reduced below required minimums. The result has been impairment of the ability of financial institutions to attract capital and a reduction in investor and consumer confidence.

A study of valuation mechanisms shows how overregulation can be used to reduce loan and real estate values to unrealistic levels.

In all mortgage lending, the value of the collateral is a vital indication of the soundness of the loan. For single-family residential loans, the most commonly used measurement of soundness is the loan-to-value ratio, where the amount of the loan is related to property values (usually determined by sale prices of comparable properties).

Demand Factor in Construction

For construction loans, an appraisal value of the property can only be approximated because it depends on demand for the project by buyers or lease tenants after completion. Further risks for lenders are unanticipated increases in construction costs, builder defalcations, and downturns in the housing cycle or economy that may reduce the ultimate selling price of the property.

Time to completion or sale is a critical factor in valuing the soundness of a construction loan. That is one reason why analysts look at the amount of funds remaining in interest reserves. It is no wonder that construction loans are regarded as more risky than other types of lending.

> **'Overregulation can reduce loan and property values to unrealistic levels.'**

Rental Properties Pose Problem

Income properties, unlike single-family homes, may be hard to value based on comparables. They often represent completed buildings with some history of rental income. If such properties have a history, the value of the property can be approximated by capitalizing the income stream the property is generating or would be expected to generate in a sale at some future date, after deducting taxes, maintenance, and selling costs.

The capitalization rate is used to convert the estimated cash flow into a market value that would be satisfactory to a buyer. To ensure that income-property loans are properly valued on a lender's balance sheet, accountants and regulators check the assumptions used by the lender, including the capitalization rate, the holding period, and projections of future income.

The latter often depend on assumptions about rental inflation rates, future occupancy rates, sales of comparable properties, and other factors. The objective is to arrive at the net realizable value of the property.

S&Ls Treated Differently

Unlike commercial and savings banks, in computing net realizable value savings and loans are required to discount the income that is expected during the period that a property is held (or a loan is expected to be outstanding) back to present value at a rate that reflects their cost of funds. Banks, on the other hand, merely add the undiscounted cash flows to the appraised value of the property to arrive at net realizable value. Thus, the valuation method used by thrifts is more conservative than that used by banks.

Figuring Fair Market Value

For shaky loans or foreclosed property another measurement is derived: fair market value. In this case a discount factor is used to reduce the expected stream of income, which is often higher than the financial institution's cost of funds and thus may reduce the carrying value of the property.

At the same time, the appraised value of the property may also be reduced by a higher capitalization rate. The effects of

Community Bankers Help Revive Analysis

The **Independent Bankers Association of America** joined the cacophony of complaints and persuaded the **Federal Reserve Board** to reinstitute its functional cost analysis program.

To produce the analysis, the 12 Fed district banks collect, average, and publish cost data from members, allowing executives to compare their operating and overhead costs with those of similar banks.

"Many community banks have relied on the program to set appropriate, competitive prices for customer services," former association president **O.J. Tomson** wrote late last year to Fed Governor **Wayne D. Angell**.

This month, Mr. Angell wrote back, explaining that the cost analysis, which was scrapped last year because of rising costs and declining bank participation, would return in 1991. Changes will be made, he added.

A full-time manager is being assigned to the analysis to help promote it, Mr. Angell wrote in the March 14 letter to Mr. Tomson. The report is being revised, and several banking products are being added, he wrote. Fees will be increased, too.

Mr. Angell said more banks must participate to keep the program going, and he asked for help from the independent bankers group. "It would be very helpful if you contacted your membership to encourage their participation . . . in a revitalized FCA program," he wrote.

Norwest Comes Out On Top in Indiana

Norwest Corp. defeated the **Indiana Bankers Association** this month when the **Indiana General Assembly** passed a bill allowing the Minneapolis-based banking company to buy a bank in South Bend, Ind.

Before the bill passed, Minnesota banks were banned from acquiring banks in the Hoosier state. Indiana is to open itself to reciprocal interstate banking in July 1992.

"It was not felt necessary to accelerate that trigger date," said **Tom Williams,** the top lobbyist for the Indiana bankers group.

Tom Williams

But the bill passed, clearing the way for Norwest to buy **First Interstate Corporation of Wisconsin,** Kohler, which in turn owns **First Interstate Bank of Northern Indiana,** South Bend. Norwest would have had to divest the South Bend bank if the bill had been defeated. The Federal Reserve approved the acquisition Monday.

The law also gives thrifts in the state a way to "flip" their charters into bank charters. The IBA opposed at least part of this measure, Mr. Williams said. "We were in favor of it, except one provision that allows mutual thrifts to become mutual savings banks," he said. "It allows those institutions a safe harbor from acquisition by any other institution."

Kansas Bankers Get To Put Bite on Bush

They weren't served broccoli, but three Kansas bankers did break bread with **President Bush** Tuesday.

The White House luncheon marked the 100th anniversary of Dwight D. Eisenhower's birth. Since Ike grew up in Kansas, Sen. **Bob Dole,** R-Kan., got to hand out a few invites.

Harold Stones

The recipients? Three representatives of the **Kansas Bankers Association: Harold Stones,** its energetic executive vice president, and the group's current and incoming presidents, **William R. Docking,** president of **Union State Bank,** Arkansas City, and **John M. Davis,** president of **Fidelity State Bank,** Garden City.

Mr. Stones has earned the nickname "the happy warrior" among banking lobbyists. He is a good-humored man who does not let go of an issue until he gets his way. For months last year, he beat on the **Resolution Trust Corp.,** trying to persuade it to sell insolvent thrifts by the branch rather than as whole institutions. The RTC now offers institutions to buyers by branch.

State Bankers Flock To Nation's Capital For Spring Rites

Spring is the season when state banking associations meet in Washington, hoping to bend the ears of a few lawmakers and regulators.

This week, members of the Alabama, Michigan, North and South Dakota, and Puerto Rico bankers associations met with their congressmen and regulatory officials.

Gary W. Fields, director of the **American Bankers Association's** state association division, said the visiting bankers, lawmakers and regulators, and even the ABA Washington staff benefit.

"From our point of view, we learn about what is happening outside the beltway," he said. "It's our reality check."

Mr. Fields listed the issues that bankers are pursuing with lawmakers and regulators in order of importance: deposit insurance reform, regulation overload, competition from credit unions, lender liability problems, and expanded powers.

Next week, members of the Delaware, Massachusetts, and North Carolina banking associations will arrive. ☐

Venezuela Debt Plan Given Good Marks for Flexibility

By JAMES R. KRAUS

NEW YORK — Venezuela will make its first pitch to banks for its new debt-reduction package Monday at the Inter-American Development Bank's annual meeting in Montreal.

At the same time, bankers said that informal talks would be held with Brazilian officials on starting negotiations for debt reduction for that country.

Bankers said formal negotiations with Brazil could start within a month.

Those helping to market the Venezuelan package stressed that the purely voluntary aspect of the deal should make it easier to market than previous agreements with Mexico and the Philippines.

Unlike the previous agreements, the Venezuelan package has not been formally endorsed by the country's bank advisory committee. Endorsement is normally a prerequisite for marketing any debt restructuring agreement.

Instead, the 16-bank Venezuelan advisory committee agreed to waive the requirement for an endorsement, mainly because banks could not agree among themselves on the options they should offer Venezuela.

Bankers who helped arrange the package say the lack of any need for endorsement is important. Waiving the need for endorsement leaves banks free to pick the option in their own best interest without fearing either peer pressure from other banks or indirect retaliation from bank regulators.

The Venezuelan debt-reduction package is the fourth to be drawn up since Treasury Secretary Nicholas F. Brady called on banks last year to forgive a portion of their loans to financially troubled Third World countries. Agreements have been signed with Mexico and the Philippines, and another has been drawn up with Costa Rica.

The Venezuelan package offers five options, including a debt buyback, a permanent reduction on the interest and principal Venezuela pays on $20.6 billion in medium-term and long-term loans, and temporary interest rate reductions that oblige Venezuela to pay market rates if the price of oil rises above a certain price.

The World Bank, International Monetary Fund, Japan, and Spain will provide about $2 billion to back the bonds Venezuela will issue in exchange for its bank loans.

Bankers expect half of Venezuela's 300 creditor banks to attend the presentation Monday. Term sheets, the final legal draft of the package, are expected to go out to banks at the end of April.

Informal talks will be held separately in Montreal with senior Brazilian officials, including the country's new minister of the economy, Zelia Cardoso de Mello, on a possible debt-reduction agreement. Brazil owes foreign commercial banks an $65 billion.

The three-day annual meeting of the Inter-American Development Bank is scheduled to run April 2 to 4.

AUSTRALIA

A spokesman for the **Australia and New Zealand Banking Group** Ltd. said he had no knowledge concerning a report that the company was about to purchase **National Mutual Royal Bank** Ltd.

Australian Associated Press quoted industry sources as saying ANZ was set to buy 80% of the bank for $450 million.

An ANZ spokesman said, "We do not comment on market rumors." Asked whether the report had any basis in reality, he told callers, "No, not as far as I know."

NMRB is owned 50/50 by **Royal Bank of Canada** and **National Mutual Life Association** of Australia.

The wire service reported that an official statement from ANZ about the takeover of National Mutual Royal Bank was likely on Friday.

Quoting industry sources, AAP said the Royal Bank would sell its 50% stake in NMRB to National Mutual, effective next Monday.

National Mutual will then sell at least 80% of NMRA to the ANZ for about $450 million, the wire service reported the industry sources as having said.

NMRB started business with a full banking license after Australia opened the door to foreign banks in the mid-1980s.

— Reuters

WEST GERMANY

A new electronic interbank clearing system is being introduced in Frankfurt with the intention of speeding up banking transactions and increasing the city's competitiveness as a financial center.

Karl Thomas, president of the Regional Central Bank of the State of Hesse, where Frankfurt is situated, told a news conference that the system was developed at a cost of about $2.9 million.

Fourteen banks are participating in a pilot project of the new system, which will eventually be extended to encompass all Frankfurt trade.

Mr. Thomas said the banks involved in the pilot account for over two-thirds of Frankfurt money transfers.

These transfers average 400 billion marks a day and can reach almost one trillion marks on peak days.

— Reuters

European Unions Fear Layoffs

Strikes Possible Both at Home Offices and Abroad

Continued from *page* **1**

prove their competitive position. Analysts said the elimination of duplicated services could result in at least 10,000 layoffs.

Cooperation among unions to combat such trends is being routed through the International Federation of Commercial, Clerical, and Professional Employees, based in Geneva. Affiliated membership totals two million from 80 countries.

Unions and staff associations in a number of countries are formulating a "global strategy" to deal with multinational banks in addressing issues such as union recognition, job losses caused by mergers, and the impact of new technology, said the federation's general secretary, Philip Jennings.

Days of Action Urged

"Some of our union members are already urging us to hold international days of action – work stoppages across national borders aimed at pressure against banks where the unions have disputes," he says.

Asked if the unions eventually could amass the power to close down a bank internationally through coordinated action, Mr. Jennings says: "That could be possible, but would be the ultimate sanction. Unions are realizing that just to operate nationally is not sufficient. They must cooperate internationally to deal with multinational banks."

In Britain, David Burton, of the Banking, Finance, and Insurance Union, Europe's biggest finance union, agrees that coordinated international strike action is a "distinct possibility" in a drive for union recognition and related demands.

Mr. Jennings says that, in the past four months alone, there have been more banking disputes worldwide than "in the last 40 years," with the strikes in Scandinavia, disputes elsewhere in Europe, and labor troubles in Africa and Latin America.

A labor group is compiling a global data base of banks and their policies toward unions.

Pay has been at the head of list of demands, "but unions are seeking strong guarantees on job security as banks seek to cut costs," he says.

In Sweden, Magnus Neuberg, deputy general secretary of the Swedish banking union, says that effective worldwide action against banks "will need very strong unions," a powerbase that will only be established by international cooperation.

Campaign for Rights

Mr. Burton, who heads his union's international division, says there is a campaign through the federation for a clause in the European Community's banking and social laws "to give rights to have trade union representation at the big multinational banks. These banks operate across the world and we, as unions, need similarly to coordinate in order to face up to common issues."

In pursuit of these aims, the federation is creating a data base to list every bank around the world and the countries where these institutions either grant or refuse union recognition, the British official says.

"The plan includes highlighting those banks who exploit their workers and who are generally bad employers."

Containing the Problems

Unions hope, through greater coordination, to prevent unfavorable management styles from being exported from country to country. He notes that U.S. banks have historically resisted unionization.

Meantime, growing union coordination in Europe proved successful during the strike and lockouts earlier this year in Sweden and Finland, which paralyzed much of those two nations' banking systems.

"The banks there tried to get banks in other countries, including Norway, Denmark, and Germany to undertake transactions on their behalf, but bank workers in those countries refused to handle the business," Mr. Burton says.

"These are the types of economic sanctions which the unions are trying to create on a global basis."

He adds: "We're very cooperative and accept that the banks have to remain competitive and profitable in order to maintain personnel levels. But we do want greater safeguards for our members' job security, through agreements like retraining programs." ☐

Foreigners Allotted 20% Stake in Polish Bank

By JOHN EVANS

LONDON — Foreign subscribers have been allotted 20% of the shares in a small Polish bank, Bank Inicjatyw Gospodarczych SA, in an offering intended to take the state-sector bank private.

The offering, under the country's new Western-style economic system, consisted of 15,000 shares of common stock, with 3,000 allocated to foreign shareholders. Foreigners had applied for 9,012 shares, or nearly 40% of the issue.

But the Narodowy Bank Polski, Poland's central bank, permitted only 20% to go overseas.

About 1,000 investors applied for 22,857 shares in the offering, which started in mid-February. The offering price was set at $6.30 a share, raising a total of $94,500.

Offering Oversubscribed

"This comfortably oversubscribed the offer, diluting the state shareholding in Bank I.G. to 41.3% from 99.3%, thus taking the bank into the private sector," said a spokesman for First Europe Equity and Bond Co., a London-based investment bank that acted as adviser for the issue.

The spokesman declined to identify the foreign investors who bought into the bank.

Last fall, another newly established Polish bank, Bank Komumalny , also went private by selling stock and plans another offering in April. Foreign investors will be allowed to purchase up to 20% of the issue. ☐

Bank's Victory Over Auditor May Set Trend

By SAM ZUCKERMAN

SAN FRANCISCO — A jury in Orange County, Calif., recently ordered Ernst & Young – one of the nation's Big Six accounting firms – to pay $5 million to Union Bank, San Francisco, for misrepresenting a borrower's financial condition.

This verdict added banks to the growing list of nonclients that have won suits against accountants. The plaintiffs in these suits typically had stakes in businesses that had been audited by the accountants; they sued on grounds that the audits had been misleading.

ANALYSIS: *Follow-up on the news*

Suits have occasionally been won by stockholders and nonbank creditors who lost money in corporations that had been audited. Suits of this type contend that the accountants were negligent in preparing financial statements of these corporations.

But legal experts say it is rare for banks to win jury trials in cases arising from accountants' opinions on loan customers. All the same, banks seem to be increasingly willing to take borrowers' accountants to court.

"You are seeing banks sue more often, alleging reliance on audited – and sometimes even unaudited – financial statements," said Ronald B. Klein, an attorney for the Cal Accountants Mutual Insurance Co. The company provides professional liability insurance to accountants.

A Question of Trust

At stake is the way banks use audited financial statements in making loan decisions. Bankers argue that they should be able to trust an auditor's competence and truthfulness. Accountants say that financial statements are opinions based on available information, and that bankers must enforce their own underwriting standards.

"Can we or can we not rely upon accountants? That was really the issue" in the Union Bank suit, said Stephen Weiss, the bank's deputy general counsel.

Until the Orange County trial, banks usually lost suits against accountants. "I can't remember a jury verdict for banks in an accountant third-party liability case," Mr. Klein said.

Legal Precedents

In recent months, the supreme courts of Alabama and West Virginia have upheld low-

Comerica Off To Early Start In California

By NANINE ALEXANDER

When California passed a bill three years ago opening its borders to national interstate banking on Jan. 1, 1991, there was widespread speculation that major New York banks would rush to buy up banks in the state.

But so far, only midsize Comerica Inc. is showing interest.

The Detroit-based bank company announced late Monday it would acquire InBancshares, a $242 million-asset bank company based in suburban Los Angeles. Comerica also agreed, late last year, to acquire the $485 million-asset Plaza Commerce Bancorp, based in San Jose.

Both transactions are expected to close early next year, after California's national interstate banking law is triggered.

Though large New York money-center banks apparently want to enter the California market, analysts said Tuesday that they are prohibited from doing so because of their mounting real estate lending problems and their battered stock prices.

"New York banks want to buy bigger banks than Comerica is looking at," said Henry C. Dickson, an analyst with McDonald & Company Securities Inc., Cleveland. "It would be tough to do a stock deal without [share-

White House to Bypass Kemp's Pick for Agency

By BARBARA A. REHM

WASHINGTON — In the latest sign of disarray in the government's bailout of the thrift industry, the White House confirmed Tuesday that it would not nominate Mary K. Bush as chairman of the Federal Housing Finance Board, despite the recommendation of Housing and Urban Development Secretary Jack Kemp.

Mr. Kemp recommended Ms. Bush last September, when she became acting managing director of the board. The agency was established by the thrift bailout law last summer to oversee the Federal Home Loan Bank System.

Ms. Bush's candidacy was dealt a blow last month when word leaked out that she had given three friends nearly $200,000 in no-bid contracts to help get the agency running.

Contracts Called Separate

A White House spokesman confirmed Tuesday a *Washington Post* report that Ms. Bush would not be nominated. The report said the White House had decided to make the board position part time rather than the full-time job Ms. Bush had expected. The questions over the no-bid contracts were "a separate issue," according to the spokesman.

Robert E. Nipp, a HUD spokesman, confirmed that Mr.

Mary K. Bush
Housing Finance Board

Kemp had offered Ms. Bush the option to stay on as the agency's managing director. Ms. Bush was set to meet with Mr. Kemp Tuesday "to discuss her role," according to her spokesman, Joesph Slye. Neither was available for comment.

Mr. Kemp is the only person appointed so far to the five-member finance board, which is overseen by HUD. The agency's slow start has invited comparisons with the Resolution Trust Corp., which has also been subject to political infighting and delays in the appointment of

Low Share Price Bedevils Security's Chief

By SAM ZUCKERMAN

LOS ANGELES — When Robert H. Smith took over the reins of Security Pacific Corp. in January, he inherited one of the strongest banking franchises in the country.

Based in the booming Pacific Rim market, the company had just posted an 18.8% return on equity, the fourth-highest among superregional banks in 1989. Common equity stood at a solid 4.83% of assets, and assets were up 8% to $84 billion for the year.

But Mr. Smith also inherited a frustrating problem: a lagging stock price. For all the bank's apparent strengths, investors value its stock barely over book value.

Worse than Average Performer

To be sure, Security Pacific is not alone. The stocks of many large banks are under siege because of investor concerns about real estate loans, leveraged buyouts, and other problem assets. Nevertheless, Security Pacific's shares have fallen deeper and recovered more slowly than those of most other big banks.

TAKING STOCK: Robert H. Smith, head of Security Pacific, has conducted brainstorming sessions to find ways of making the company attractive to Wall Street.

The problem is particularly restraining for Security Pacific. A low stock price would stymie Mr. Smith's ambitious plan to expand operations to as many as 35 states in the next decade. Expansion "depends on our ability to have currency, our stock," the 54-year-old chief executive officer acknowledged during an interview at the company's Los Angeles headquarters.

The day after Mr. Smith re-

Banks Wary of Sears Data System

Electronic Payments Could Cut Their Share of Fees

By RICHARD LAYNE

NEW YORK — The early experience of Sears, Roebuck and Co. in marketing a new electronic payment service to corporations indicates that banks may lose a portion of their anticipated cash-management fees to communications companies.

The results are viewed as disappointing to several banks that have joined a Sears subsidiary, Sears Communications Co., in promoting an electronic data interchange system for corporate trade payments and related documents. The response also runs contrary to published surveys and bankers' experience marketing EDI on their own.

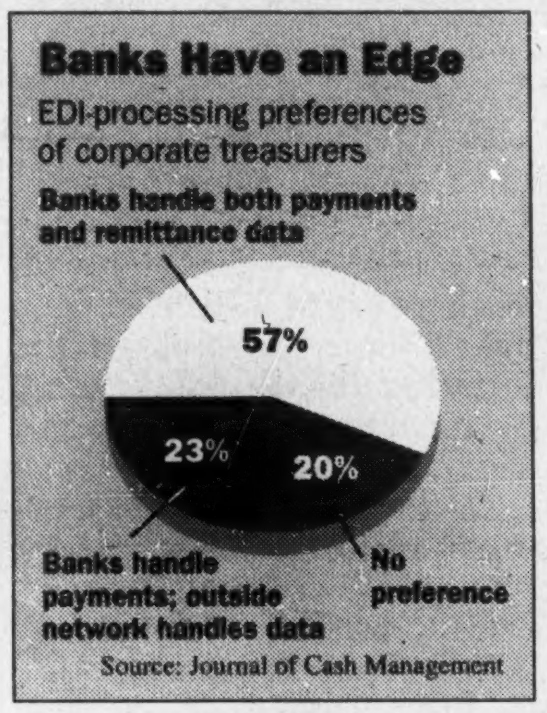
In discussions with 50 corporate treasurers, Sears Communications Co. found that virtually all wanted the banks to handle only the payment portion of EDI transactions, while related documentation would be transmitted via specialized communications suppliers known as value-added networks.

Data Can Precede Funds

In Sears' EDI offering, data on a corporate transaction can be delivered through its network up to seven days before the funds transfer is made, enabling treasurers to plan their cash flows in advance.

"They all want the detail early, as opposed to through the banking system," said Sara Coffou, manager at Sears Communications Co. Its eight-bank consortium, called Financial Data Interchange Service, has begun to originate payments for Sears Merchandising Group and plans to provide the service to other corporations.

Of the 15 or so corporations that have signed on for the financial EDI service, in which electronic payments accompany invoice information, all have asked that value-added networks, not banks, handle the transmission of invoices.



Banks Have an Edge
EDI-processing preferences of corporate treasurers

Source: Journal of Cash Management

Fees Are Diminished

Use of a value-added network for the nonfinancial part of the service limits the cash-management business for originating banks. The Sears experience could indicate that banks may have to find new sources of fees in this budding electronic business.

Levi Strauss & Co., the first of Sears' trading partners to sign on for the service, receives data and dollars together through the banking payment system. Once Strauss completes modifications in its accounts-receivable system, Ms. Coffou said, the retailer will use a value-added network.

With transaction details available before payments are made, bankers were not surprised that Sears' suppliers prefer a value-added network over a bank.

Value Is Noted

"If Sears is talking to larger companies that are EDI proficient and they can get the remittance information early, they are better off," said Henry L. Waszkowski, senior vice president at First Wachovia Corp., a member of the Sears alliance.

Ms. Coffou's experience runs counter to two surveys of corporate treasurers. In 1989, EDI Group Ltd., Oak Park, Ill., asked 97 treasurers whether they wanted a bank to handle both the payments and the payment detail. Three-quarters said yes.

Robert D. Edwards, senior vice president at Pittsburgh National Bank and two other bankers published a study on the dollars-and-data issue in the January-February *Journal of Cash Management*. Of 42 corporations surveyed, more than half preferred that banks handle both payments and payment detail.

Bankers said that their customers want the financial institutions' help in navigating this new payment technology.

"Our customers want the payment and payment information through the bank the way they've always had it," said Jane Lohmar, assistant vice president at First Chicago Corp., which is not part of the Sears consortium.

Given the small volume of electronic-data originations for banks, any loss of revenue to nonbank suppliers is not sizable.

Alternatives Noted

"Sure, the bank makes more money if the information goes through the bank," said Peter J. Stein, first vice president at National Bank of Detroit. "But banks can still provide services in formatting [of data], even if the information does move outside the banking system."

Also, bankers said that financial EDI is a new field, in which all areas for fee generation are not yet apparent. "We may lose overall fees in cash management," said Ralph Joy, vice president at Mellon Bank. "That's assuming you don't find some value-added services for EDI to supplement the lost fees." □

Graphnet, Germans Offer Low-Cost, Fast Bank Telex

By JEANNE IIDA

NEW YORK — Graphnet Inc. and the West German telecommunications carrier Deutsche Bundespost will begin offering a service to U.S. banks in May that can make their international telex traffic faster and less expensive.

This will be the first such service, called teletex, offered in the United States. Teletex is a faster version of telex that transmits messages at about one-third the cost of telex from one personal computer "mailbox" to another.

When European business partners send teletex messages to the United States, they must be converted to telex format. This raises the cost and increases the possibility of error, said Yaakov Elkon, president and chief executive of Graphnet in Teaneck, N.J.

Supplement to Swift Network

Many banks use telex to transmit and receive letters of credit and payment instructions where the so-called Swift network does not operate. Swift, the Society for Worldwide Interbank Financial Telecommunication, is a nonprofit communications consortium of banks in 67 nations.

Most banks, however, are moving as much of their international traffic as possible away from costly and delay-prone telex to electronic mail or to networks such as Swift.

Over time, the volume of messages over telex will continue to decline, bankers said. Caesar Gavilan, operations officer at Algemene Bank Nederland in New York, said about 40% of the bank's financial payment instructions are transmitted via telex. He projected that just 10% will go that route by 1995.

"As Swift grows, telex continues to decrease," he said.

Swift is both cheaper and more secure than telex traffic, Mr. Gavilan said. And while the new teletex service from Graphnet will cost about one-third less than telex, it will still cost 10 times more than telex, said James Martin, vice president, payment services, Seattle-First National Bank.

But where telex must be used, Graphnet is both competitive and relatively secure. "There's always going to be some telex traffic," said Mr. Martin, and Graphnet offers his bank, a BankAmerica Corp. subsidiary, "very competitive" prices. □

Nonbank Gets Big Card Processing Contract

NEW YORK — First Tennessee Bank said Tuesday it signed a five year, $10 million-plus contract to have Electronic Data Systems Corp. handle its bank card processing and merchant accounting.

First Tennessee serves 600,000 cardholders and 30,000 card-accepting merchants. Dallas-based EDS, a leading data-processing company expanding into the credit card field, will process transactions, keep accounting records, and generate statements for First Tennessee customers.

EDS, a subsidiary of General Motors Corp., will also provide billing and profitability analyses. The $6.4 billion-asset First Tennessee Bank is the principal subsidiary of First Tennessee National Corp., Memphis.

EDS signed another merchant-processing contract a month ago with First USA Bank, a Delaware credit card bank, for services that could generate $100 million in revenue.

COMMENT/ *By Christopher T. Mahoney*

Markets, Cool to Leverage, Make LBO Survival Harder

Besides real estate, a worrisome area of asset quality is leveraged buyout loans. By LBOs, I mean all the deals in which companies used a combination of junk bonds and bank debt to lever up, for whatever reason. All the obvious names come to mind, with RJR Nabisco being the ultimate example.

The numbers for the banks are too big. Using the old, narrower definition, the money centers had $36 billion of LBO exposure at the end of 1988, which was a little less than their common equity in aggregate.

The events of the past nine months have not helped LBO credit quality. Many of the risks that used to be cited, such as overly optimistic projections and reliance on asset quality, have begun to manifest themselves.

But it is ironic that what may ultimately prove to be the undoing of many LBOs is something that few people have identified as a threat to LBO credit quality, namely, an almost overnight change in market psychology from proleverage in early 1989 to antileverage in early 1990.

The traditional bearish view was that a recession would cause some LBOs to default, which would start the downward cycle. But instead, the psychology changed without a recession, and that change alone has had and will have devastating consequences (which may include a recession).

A changed attitude toward leverage is dangerous for leveraged borrowers: A bearish environment is bad for both refinancing and asset values. It may turn out that a recession will not be needed to put a lot of LBOs into the tank.

An LBO loan can be repaid only through three sources: asset sales, refinancing, and internal cash flow. But few LBOs can repay debt from cash flow, which leaves asset sales and refinancing.

Values Have Declined

Private market values are now under pressure because of the junk collapse. Without ready sources of finance, the number of potential purchasers and what they can pay is reduced. Hilton Hotels and Cluett-Peabody are the most recent examples of properties that did not fetch what they were supposed to.

It seems that the junk-financed acquirers were willing to pay a lot more for a given company than other people are willing to pay, which is not good news for a lot of LBOs.

Similarly, the outlook on the refinancing front is also bleak. The junk market is basically closed to new issues, and bank credit committees are less and less inclined to entertain new commitments.

Refinancing Junk Not Easy

Banks can and will voluntarily refinance maturing LBO loans if the borrower is meeting projections, and banks will involuntarily refinance when the borrower is not meeting plan. But it is not as easy to refinance junk bonds: If principal payments cannot be met, there is either a renegotiated restructuring (like Seaman Furniture and SCI-TV) or a bankruptcy (like Revco, Campeau, and Hillsborough Holding).

The fact of the matter is, although junk bonds are junior to bank debt, they are not equity. Equity holders cannot tank the company; junk holders can and do.

The junk collapse, by closing off refinancing, is causing another set of problems as well. Many LBO structures contain one or more of the following: reset bonds, zero coupon bonds, payment-in-kind bonds, and increasing-rate (or step-up) notes. These instruments were attractive because they postponed or artificially reduced interest payments in the early years.

But they can be time bombs for companies that cannot refinance. Reset bonds are the worst.

Zeros and payment-in-kind bonds, by accruing interest, compound the refinancing problem. Exchange notes with a step-up feature, sometimes known as increasing-rate notes, provide for higher and higher interest rates in order to encourage the issuer to refinance, which is fine if it can refinance but a big problem if it cannot.

The bottom line is that we are expecting LBO problems to rise substantially. Since bank LBO loans are generally senior and secured, actual losses should be relatively modest, certainly less than with problem real estate loans or LDC loans. But there will be exceptions in which banks will lose quite a bit.

More important, a real worry is that a high level of problem LBO loans can cause a loss of confidence, especially if banks have other problems.

For this reason, Moody's is increasingly concerned about the appropriateness of large LBO concentrations, especially for weaker institutions. Although we generally view LBO risk concentrations more negatively than before, we do not expect LBO exposures to result in a significant number of rating downgrades. ☐

Mr. Mahoney is a vice president at Moody's Investors Service. This is the text of a speech he gave at the Bank and Financial Analysts Association Annual Bank Symposium in New York on March 22.

GRAPEVINE/ *By Jed Horowitz*

Reading the Pay Stubs. Thomas S. Johnson received a $500,000 signing bonus when he joined Manufacturers Hanover Corp. as its president on Dec. 19, according to the company's proxy statement. He also inked a three-year contract guaranteeing him an annual base salary of $650,000.

Not a bad package, at first glance. But a proxy statement from his former employer, Chemical Banking Corp., reveals that Hanover may simply have been picking up the slack.

Mr. Johnson was paid $484,917 in salary and bonus as president of Chemical last year – about $505,000 less than his previous year's compensation. His executive office colleagues at Chemical took much smaller pay cuts.

At Hanover, meanwhile, some people are interpreting the three-year Johnson contract as a sign that he will succeed chairman John F. McGillicuddy at the end of 1992. Mr. McGillicuddy, 59, has named Mr. Johnson heir apparent but never specified when the transition would occur. Mr. McGillicudddy, incidentally, received $1.7 million in 1989.

BONY Prowls for Prey. Regional banks, beware. Now that Bank of New York has digested Irving Bank Corp., it wants to swallow "another bank of substantial size, preferably in another geographic location," according to an internal employee publication.

Carter Bacot, the bank's chairman, recently told employees it is "economically wise" to diversify deposit bases, according to the newsletter. The bank is "in a position" to buy, he added. Merger-related savings from the hostile Irving takeover reached $108 million last year, $8 million more than budgeted.

Bank of New York's securities-processing unit also is on the prowl to acquire corporate-trust, custody, and stock-transfer businesses, the newsletter said. (However, the unit plans to eliminate its mutual-funds-transfer agency business this year.) The regional bank also will continue its aggressive pursuit of credit card portfolios.

Internationally, the $49 billion-asset bank intends to build volume by pricing its funds-transfer services "very aggressively," according to a report on BONY's three-year strategic plan. It also will focus on expanding letter-of-credit services as a correspondent banking product to large regional banks.

* * *

Credit Card Crunch? Although bank examiners are still scrutinizing real estate and highly leveraged loan portfolios, some regulators are already worrying about the next problem area: consumer credit.

Karen J. Wilson, head of the Comptroller of the Currency's posse of examiners in the Northeast, says she fears that banks are using the wrong criteria in evaluating consumer credit quality.

The historical method of monitoring past-due balances may be outmoded because credit is so easily available today through nationwide card solicitations, she said in an interview. Consumers can easily set up Ponzi schemes, Ms. Wilson said, borrowing on new credit cards to make ever smaller payments on old ones. "Until the bubble breaks, everybody thinks they've got a great deal," she said.

It's premature to talk about scrutinizing consumer portfolios, Ms. Wilson said, but added: "As we look at consumer credit or target it in individual banks, we'll be asking questions on how you control risk."

* * *

Of Love and Money. Former-Texas Commerce Bancshares chairman Ben F. Love, who engineered the sale of his bank company to Chemical in 1987 for $1.1 billion, is still a happy Chemical man. For the next five years, he will collect $10,000 a month as a consultant to Chemical, according to the bank's proxy statement. Mr. Love received $662,083 from Chemical last year before retiring Dec. 1.

* * *

Know Your Customer. You lend a good customer a lot of money, you lease an apartment from him, your family does business with him. What thanks do you get? If you are Jerome McDougal, chairman and chief executive of Apple Bancorp, the customer launches a $140 million hostile bid against your company.

Last week, Stanley Stahl launched a $38-a-share attack against Apple. Mr. McDougal, according to tender offer documents, has leased an apartment from Stanley Stahl since 1987 – paying him $27,660 in rent since then.

The two have other personal financial ties. Mr. Stahl, who has more than $48 million of mortgages outstanding with Apple, lent $245,000 to Mr. McDougal's daughter and son-in-law at 9% interest in 1987. The loan, guaranteed by Mr. McDougal, was repaid in full last December.

Mr. Stahl, for his part, has done some favors for Apple. As of March 27, the multimillionaire real estate investor kept $536,100 in two passbook savings accounts at Apple. They pay interest of 5.25%.

He also has $25 million in negotiable certificates of deposit from Apple that pay 8%. However, he can withdraw them on seven days' notice, and they mature if the parties cannot agree on a new interest rate after six months. The documents note that Mr. Stahl opened the accounts to insure liquidity to propel his bid. ☐

COMMENT/ *By Eileen M. Friars, Robert B. Hedges, and Craig D. Elderkin*

How to Identify Prospects For a Successful Takeover

There are unquestionable incentives for banks to expand customer franchises and achieve operating economies through mergers.

A recent study by the MAC Group for the Bank Marketing Association, titled "Winning Strategies for Consolidation," provides a framework banks can use to identify the most suitable merger partners.

Interestingly, that same framework explains the success and failure of hostile takeovers, and contradicts the assumption that hostile acquisitions in the commercial banking industry are doomed to failure. The potential benefits of a merger between the right institutions are so significant that banks failing to initiate them may ultimately find themselves a merger candidate, willingly or not.

Conventional industry wisdom says that hostile takeovers have no winners. The target's franchise will be damaged, perhaps irreparably, in the battle, and the acquirer's stock will be overly diluted.

> **'What is critical is a clear-eyed analysis of the relative franchise strengths of the attacker and its target.'**

Hostile takeovers can work, however. What is critical is a clear-eyed analysis of the relative franchise strengths of the attacker and its target and a rational approach to consummating the deal so that those strengths are retained and optimized.

Even though attackers always pay a significant premium over market value (see table), that premium can be recouped through improved earnings from a successful consolidation.

The steps below, distilled from our recent study, provide a structure for achieving mergers that work, including mergers with a reluctant partner.

Steps to Take

- Identify specific opportunities for creating value and specific objectives for the acquisition.

In the best-known hostile takeover, Bank of New York's 13-month battle for control of Irving Trust, the attacker sought to create value in its key franchise, its operating businesses.

The clear priority given to this objective drove the acquisition strategy. Revenue could be raised by purchasing a larger market share in the processing businesses common to both institutions.

Costs could be reduced by eliminating duplicate operations in "across the street" locations. Comparable improvement could be achieved in certain other wholesale banking businesses.

It is too soon to judge results, but Bank of New York is successfully proceeding along its stated course to achieve the objectives.

- Identify potential partners with the necessary characteristics and whose price would be feasible.

The first hostile takeover of a bank in the current era – of Union Commerce Bank, Cleveland, by Huntington Bancshares, Columbus, in 1981 – was financially untenable from the start. At a discount of 10% to book value, the original offer was too low for Union Commerce's management and shareholders, generating animosity that ultimately resulted in the loss of business and key people.

Huntington's goal was to make itself safe from acquisition by increasing its size, assets, equity, and number of shareholders. Union's management recognized this goal, however, and made itself less attractive for this purpose by selling its southern Ohio banking chain early in the struggle.

Perseverance Paid Off

Huntington persevered, however. Moreover, the final offer after the intercession of a white knight was too high, at twice market value. Union was struggling to come back from severe writeoffs taken two years earlier and was performing poorly compared with peers.

The combined entity lost customers, reduced distribution outlets, and lost managers and bankers. Integration proved more costly than expected. The takeover depressed earnings by 40%, and observers consider the deal a failure.

In contrast, when a hostile attempt put Centerre Bank into play in 1988, three St. Louis competitors bid to acquire its strong position in local markets and its leading trust operation.

Integration Was Quick

The eventual high bidder and "hostile" acquirer, Boatmen's Bancshares, moved quickly to integrate the two banks and maximize the franchise. It seems to have taken the steps necessary to add value to the merged company through cost cutting and elimination of overlapping functions. Although still in the integration phase, the merger appears to be paying off.

- Focus on integration and organizational issues: How acquirer and acquired, once together, will reinforce a merger's value or nullify it.

There is a wide range of possibilities – from a hands-off position, as Boatmen's took selectively with Centerre's stellar trust department, to full absorption, as Bank of New York elected in rationalizing Irving's operating businesses.

Holding Onto Customers

Always, the objective is to retain the target's franchise strengths that were the motive for the acquisition in the first place. This means, above all, not alienating the target's customers or doing anything that will undermine their faith in the merged institution.

Many times, the most appropriate structure is some moderate form of integration. This was the solution favored by Barnett Banks Inc., Jacksonville, when it took over Florida Coast Banks in 1983.

Barnett's plan was to strengthen Florida Coast's earnings by reducing its overhead expenses. Drastic cuts might have been made but were not, since the 2% dilution in earnings resulting from the deal could be extinguished by recourse to only modest reductions.

- Resolve organizational issues. Despite the hostility of the takeover fight, Barnett succeeded in retaining key people (and thus customers) by sensitive attention to Florida Coast's management and board members.

Barnett made clear that their skills were valued. Although their chief responsibility was now narrowed to maintaining and developing banking relationships, this was still a key role in Barnett's community banking strategy.

Hostile Deals Are Few

Only a fraction of bank holding company mergers and acquisitions have been hostile – only seven of the 1,500 deals consummated between 1980 and 1988. However, many more have been attempted that have resulted in a friendly acquisition by a white knight.

The incentives to merge are powerful, if the right partner can be found. As industry consolidation continues, aggressive institutions will have less trepidation about initiating hostile as well as friendly acquisitions, providing extra incentive to make the assessments that allow a bank to manage its destiny in the face of accelerating consolidation.

The key to success is maximizing the value-building attributes and resources of the target. ☐

The authors are consultants with the MAC Group, Cambridge, Mass.

Regulators Shift Analysts' Focus Back to Banks

By JED HOROWITZ

NEW YORK — By holding an unusual meeting with bank analysts and accountants last week, the Office of the Comptroller of the Currency managed to shift most of the focus on problem real estate portfolios from its examiners to commercial banks themselves.

Bankers and analysts had been criticizing the Comptroller for using heavy-handed methods to force loan writeoffs. But analysts came away from the meeting generally convinced that the extent of credit problems justified the regulators' tactics.

ANALYSIS: *Follow-up on the news*

The meetings also dashed hopes of bankers and investors that regulators would ease their examination standards, despite complaints that their methods are forcing banks to cut off credit to corporate America.

"The meeting dispelled any perceptions that the OCC is about to back off from its policies regarding stringent writedowns on real estate loans in problem markets," First Boston analyst Eric I. Hemel told salesmen on Thursday. "Having learned an important lesson in the Southwest on the need for preventive action, the OCC is trying to leverage that experience in other regions."

The analysts' reaction to the meeting helped spur a stock selloff. They left with the feeling that no national bank with significant real estate exposure would be immune from scrutiny and that those already visited will be reviewed.

The examiners are "going to keep coming back," said one attendee, adding that there were hints as well that leveraged buyout and consumer portfolios would be scrutinized in the future.

"It's basically not going to be just an East Coast review," said Merrill Lynch analyst Judah Kraushaar, referring to examinations in progress in New England and the Southeast. "It will be the unusual [national] bank that escapes without any kind of reclassification at all, and it will get worse for those in markets with poor fundamentals."

Blame Put on Weak Markets

The Comptroller apparently succeeded in convincing analysts that poor commercial real-estate markets – not more stringent regulatory standards – have led to the increased pace of

Japanese Banks May Be Forced To Cut Back on Foreign Lending

By JOHN EVANS
and JAMES R. KRAUS

The dramatic plunge in Tokyo stock prices could force major Japanese banks to curb their rapid growth in the United States and other foreign markets, leading Japanese bankers said Friday.

"Almost all of Japan's banks will have to cut asset growth for the next few years," said Tokio Inoue, director and general manager of Dai-Ichi Kangyo Bank Ltd., the world's largest bank with about $400 billion in assets.

At Industrial Bank of Japan Ltd., Japan's sixth-largest bank, deputy president Yoh Kurosawa was less pessimistic, but he acknowledged that "fast growth by the Japanese banks won't be possible" for the immediate future.

Credit Crunch Possible

Analysts predicted that any contraction in Japanese lending would tighten credit worldwide and could push rising interest rates still higher.

"An awful lot of places, in-

Bank Stocks Skid Again On Anxiety Over Loans

By GORDON MATTHEWS

NEW YORK — Prices of most major bank stocks fell sharply again Friday over heightened concerns about the quality of commercial loan portfolios.

Shares began falling Thursday after the previous day's meeting with officials of the Office of the Comptroller of the Currency that left securities analysts expecting further writeoffs of commercial loans nationwide.

Hammering those fears home, PNC Financial Corp., the Pittsburgh superregional banking company, said Friday morning that its first-quarter earnings would be up to 40% lower because of a provision for possible losses on real estate loans. For the day, the shares were off $3.875, to $34, a loss of 10.2% in value.

Hungry Lenders Line Up to Back New UAL Offer

By WILLIAM GOODWIN

Bankers are eager to finance the $4.4 billion union buyout of UAL Corp., which the company's board of directors tentatively accepted Friday.

The unions are expected to ask banks for more than $3 billion in loans, making this the largest deal to come on the market since a previous bid for the parent of United Airlines collapsed last autumn, shaking the leveraged loan business.

"We'd love to see an opportunity develop from all this," said an official in the acquisition-finance department of one money-center bank.

"We certainly have a keen interest" in the deal, another banker said.

But despite their eagerness to see some activity in a moribund market, some bankers also said that revised terms in the new UAL pact could make bank financing more complicated and potentially riskier.

"Is it still an acceptable credit? No one knows that yet," said the head of structured finance at an-

Gonzalez Targets S&L Fraud

By STEVE KLINKERMAN

DALLAS — Henry D. Gonzalez brings his House Banking Committee to Dallas this week to find out why executives who looted millions from Texas thrifts are not behind bars.

He is not going to like what he hears.

Federal prosecutors say it will take them years to bring all of the suspects to trial. They will tell the committee tales of long and tedious investigations, cunning criminals, underfunding, and heavy staff turnover.

Meanwhile, a parade of regulators and other experts are scheduled to testify that prosecutors for years have had plenty of evidence to convict the guilty.

The panel's oversight hearings, scheduled for Wednesday and Thursday, come amid growing sentiment in Congress to increase appropriations for enforcement actions against financial criminals.

After engineering a $159 billion bailout of the thrift industry, Mr. Gonzalez and his colleagues say they are intent on seeing defrauders of thrifts punished. The panel is holding the

See **HOUSE** page 9

COMMENT / *By Paul Nadler*

Spending to Bail Out S&Ls Is a Sad Waste of Resources

The savings and loan bailout is expected to cost taxpayers $200 billion to $300 billion. But people keep asking: "Where did the money go? It didn't just disappear, did it?"

Sure, a lot of money was spent by the small group of unscrupulous thrift operators who milked the institutions for their own lifestyles. It paid for luxury cars and boats, private planes, mansions, and the like. No wonder these sectors of the economy did so well in the 1980s.

Erected Buildings

Other money went into new thrift buildings. If any industry ever had an "edifice complex," it was the savings and loans. Some communities have so many giant thrift buildings that one wonders how they find enough employees to fill them, much less enough customers to justify their existence.

Just as important is the housing that the thrifts financed. That money went to builders, contractors, lumber dealers, sellers of land, and suppliers of pipe, wire, plaster, and other products. These workers subsequently spent their income, injecting money into other fields.

In other words, the money was spent and spread around.

Many people became prosperous because their livelihood was tied to home construction, and all through the 1980s home construction was America's "fair-haired boy."

Real Buying Power

One might conclude, then, that the $200 billion to $300 billion that thrifts absorbed was not all lost. It helped the nation prosper, provided jobs, and generated buying power as the home builders and workers spent their income.

But such a benign interpretation ignores the truth. This expenditure should have been directed elsewhere based on economic standards. The projects that were financed with the thrift deposits should not be paid for by a taxpayer bailout.

What Good is the Final Product?

It is like military spending. When we make a bomb, the money does not disappear. It goes to pay the people who built the bomb and those who supplied the material.

'Those who say we need military spending to keep our economy moving do not recognize what the money could otherwise do.'

But what about the final impact? The bomb is either stored or, far worse, used to destroy structures. The same expenditure on other goods would have given us the equivalent boost in employment, but the end product would have been useful rather than destructive.

Those who say we need military spending to keep our economy moving do not recognize opportunity cost – what the money could otherwise do.

Back to the thrift situation. We now have homes that cannot be sold and that depress the market for those trying to sell existing homes. And the taxpayers will pick up the tab.

While we are spending billions on unneeded housing, we have to cut back in other areas with strong needs because of the lack of funds.

One cannot help but think back to the early New Deal. People were starving, but we plowed under fields and killed little pigs in the hope that reducing food supplies would end the Depression and the hunger.

Look at the problems the Communist nations are having in switching from government allocation of resources to marketplace allocation. Just as thousands of bureaucrats there put expenditures in the wrong place, the United States supported house construction in good years and bad, misallocating a vast portion of America's economic resources.

The money did not disappear. And people who put up the houses, hotels, and shopping centers financed by the thrifts undoubtedly feel they were paid for honest work.

But when we see so much of our wealth directed to paying for unneeded construction and when we think of what the money could have done to improve quality of life in other areas, we cannot help but remember: "The saddest words of tongue and pen are only these 'It might have been.' " ☐

Mr. Nadler is professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

A number of banks and thrifts recently began offering checking accounts that provide insurance on customer purchases. Some observers say buyer protection is a marketing tactic that can help banks attract customers. But skeptics say if the product becomes commonplace, as it has in the credit card industry, it may fail to accomplish the original purpose of distinguishing a bank's services from those of competitors. Joseph L. McCarthy, of the *American Banker* features staff, asked:

Q ***Does offering insurance on purchases made by check give a bank a competitive edge?***

■ **David J. Totaro**
First senior vice president
Dime Savings Bank, New York

I think buyer protection gives banks that offer it a competitive advantage. Dime just started to offer the product [April 2], and we opened four times as many preferred accounts than on an average day in January or February.

Offering the product should translate into a bottom-line gain, but I don't think we can estimate the dollar value on that at this time. The profitability depends on a number of variables, including where a bank buys its protection insurance and the costs of administering the program.

Providing buyer-protection puts pressure on other banks to offer similar products. If everyone offers it, any advantage will be canceled out, but those banks that don't offer it will be at a disadvantage. It's like when auto manufacturers first began making cars with air conditioning. Some buyers wouldn't even consider getting a car from someone who didn't offer the feature.

■ **David T. Fronek**
Executive vice president
Indianapolis National Bank

I'm not sure if offering buyer protection on check purchases will give banks an advantage. If everyone begins offering it, there's not much of a way to differentiate your product from anyone else's. Banks spend enough money advertising checking accounts that are fundamentally the same. How much time and money are we going to spend doing that for this product?

We're also concerned that buyer protection is being represented to the public as more than it really is. Often, customers must use other kinds of insurance, such as homeowner's, before they're even eligible to fall back on buyer-protection benefits. And customers who are disenchanted with the service will be much more likely to blame their bank than insurance companies, the primary providers of the product.

I don't think this is a money-making proposition. Offering buyer protection would impose an additional burden on banks, which would be obliged to train personnel about the nuances of any new program. Insurance companies – not banks – are the ones that stand to get rich from this product.

■ **J. Douglas Adamson**
Executive vice president
Bank Marketing Association

The real key is going to be how well banks communicate the nuances of buyer protection to their customers. This is a new service, it's different, and consumers are going to have lots of questions about it. Front-line bank employees often have a difficult time explaining bank products and services. There's a danger here that banks will try to crank out this product before they're adequately prepared to explain it.

I don't expect a stampede of banks to offer buyer protection on check purchases. This is something I think most banks will be extremely cautious about. Of course, the markets where the product already has been introduced are hot, competitive markets. Everyone's looking for a quick and easy way to make their products look different. So I think we'll at least see some responses soon.

The banks that have been the first to offer this service will derive benefits only if they do it well. For every potential reward that comes from being first, there is a potential loss.

But banks can't differentiate their checking accounts solely by offering buyer-protection coverage. The only way they can do that is to offer other bells and whistles to checking customers, including travel benefits, personal accident insurance and accidental-death insurance.

■ **Robert Gorsuch**
President
Park Bank, Madison, Wis.

I think the jury is out on whether this is something the public really wants. Here in our area, no banks have as yet chosen to offer the service. So I guess we're in a wait-and-see mode.

If everyone begins offering the service, it seems that any benefit to banks would be negated. In that case, the product would mean added costs, which ultimately would be absorbed by individual banks or passed on to consumers.

If it were marketed properly, the product might be useful. Also, as awareness of the service grows, more people might request it or shop for banks that offer it. But I'm somewhat skeptical. Among our customers, no one has yet found this to be enough of a concern to even inquire whether or not the service is available. ☐

Citicorp's Reed Urges Japan To Help Brazil with Reform

By STEVEN BRULL
Reuters

TOKYO — Citicorp, which leads Brazil's group of creditor banks, is seeking Japanese support for Brasilia's plan for economic reform.

Citicorp chairman John Reed said Friday that Japanese banks, which hold 20% to 25% of Brazil's debt of about $115 billion, could help develop a package that would spur investment in the country.

"The principal objective is to engender confidence by trying to maintain relations," Mr. Reed said. "The new program is technically fine but needs marketplace acceptance."

Economists view the public-sector deficit as being largely responsible for the country's spiraling inflation rate, a record 84.32% last month. Brazilian President Fernando Collor de Mello aims to slash the public-sector deficit 10% this year through administrative reform, increased tax collections, and privatization of state companies.

Legislators in Brazil said last week the reform program had won early support and probably would be passed in congressional voting over the weekend.

Mr. Reed said the Brazilian Bank Advisory Committee could hold talks in May and an agreement could be reached by late summer.

Brazil began suspending interest payments on some loans in July, although the country has continued to pay interest on its short-term credit lines, which are vital for financing exports and imports.

Arrears on loans to Argentina and Brazil are costing Citicorp $300 million a year, but the bank is optimistic the debt servicing problem of lesser-developed countries will be "normalized" in the next two to three years, Mr. Reed told Japanese businessmen.

... by country

LUXEMBOURG

Bank of Credit and Commerce International said it has appealed to the Florida comptroller to renew its license in the state.

The license expired on March 14, and Florida Comptroller Gerald Lewis ruled last month that it would not be renewed because of the bank's involvement in money laundering.

The bank said its lawyers intended to prove that the decision to deny the renewal was "arbitrary, capricious, and an abuse of discretion."

On Feb. 5, the bank was ordered to forfeit $15 million after pleading guilty of laundering drug money. The fine was the largest ever imposed on a bank in the United States.

The Luxembourg bank plans to continue operating its Miami branch until a ruling is made on the appeal.

The bank is owned by a Middle Eastern consortium and has assets of about $20 billion.

— Reuters

ECUADOR

Ecuador's creditor banks have agreed to include $1.185 billion in overdue interest in their negotiations of the nation's bank debt, said Abelardo Pachano, chief debt negotiator.

"Ecuador doesn't have the $1.185 billion in arrears," he told reporters. The country is aiming to reschedule $5.646 billion in bank debt.

Late last month, banks in the negotiation process agreed not to demand payment on the interest but to include it in the accord, Mr. Pachano said. The interest fell due between January 1987 and December 1989.

While the banks' counter-offer "is very positive, it has limits and conditions that we have to study," Mr. Pachano said.

In a recent statement, Ecuador President Rodrigo Borja said negotiations to reduce foreign debt have been prolonged because banks have imposed "unacceptable conditions" on the Andean nation.

Mr. Pachano said U.S. support has strengthened Ecuador's negotiating position. He cited a recent statement by Treasury Under Secretary David Mulford that Ecuador was among a group of countries on the verge of signing debt agreements based on the Brady plan.

— Reuters

WEST GERMANY

The slow liberalization of West Germany's banking system, as encouraged by the European Community, will preserve the banks' credit quality over the medium term, **Moody's Investor Service** Inc. said in a special report.

The slow pace of change will help preserve German banks' high credit quality by giving management more time to adjust to the more challenging environment after 1992, the report said.

— Reuters

ITALY

The **Agnelli** holding company of Italy said it would get a $290.4 million capital increase and **Citicorp** would take a 2% stake in the company.

Angelli, a unit of Instituto Finaziario Industriale SpA, said it would raise the capital by issuing five new shares for every 25 shares in each category.

Citicorp will pay about $24 million for the stake and will gain the right to name a board member.

Japanese May Cut Foreign Loans

Drop in Tokyo Stocks Could Lead to a Credit Crunch

Continued from *page* **1**

cluding Eastern Europe and Latin America, are chasing after Japanese capital. If you tear a hole out of their capital structure, the obvious direction this will take is a contraction in bank lending, especially to small and medium-size companies where banks here have already become cautious," said Paul Sacks, president of Multinational Strategies Inc. a New York-based consulting company.

He added that any contraction in Japanese bank finance would also limit investments here by Japanese insurance, real estate, and manufacturing companies. It would also restrict the Bush administration's efforts to stimulate economic growth by keeping interest rates down.

Yoh Kurosawa
Industrial Bank of Japan

Portfolios Devalued

The Tokyo stock market downturn has already cut heavily into the value of shares that Japanese banks hold and count toward their capital. This, in turn, means that they will have a harder time meeting new international capital guidelines set by the Bank for International Settlements. It also means they have less capital available to expand lending in the future.

The Nikkei stock market index rose 3.6% Friday to 29,279. Despite the rise, traders said the wave of selling could resume if the index goes back down below 29,000. The Nikkei has fallen nearly 25% since its high of 38,713 on Jan. 4.

Bond prices have also fallen with rising interest rates. Accounting procedures generally require Japanese banks to write down unrealized losses in bonds, and announcements of such writedowns could be forthcoming soon as the banks' fiscal year has just ended.

Other Major Worries

But Japanese bankers and analysts say they are equally worried about other things. If Japan's sky-high real estate prices start to fall, this could trigger a chain of loan defaults and sharply raise the level of nonperforming assets. Rising interest rates are ending an era of cheap funding, forcing Japanese banks to seek higher returns on their assets.

And the fall in the yen against the dollar is raising the value of their dollar-denominated assets and increasing the need for still more capital.

"We thought there would be a lot of money to expand our business. It suddenly seems this isn't the case so it means that any expansion will be more difficult and we will have to be more selective in deciding which lines of business we want to expand in," said a senior Japanese banker in New York who asked that he not be identified.

Big Stake in U.S. Market

Japanese banks have expanded rapidly in the United States during the past few years. According to an *American Banker* survey, they held $372.5 billion worth of assets as of mid-1989, or 12.1% of total U.S. banking assets. The figures do not include lending to U.S. companies via offshore offices and interbank lending out of Tokyo.

No Japanese banker is yet prepared to predict the degree to which the banks may restrain their growth.

But analysts suggest one clue comes from the latest request by the Bank of Japan, the nation's central bank. It has asked the banks to reduce to 7% from 9% their domestic lending expansion, particularly in areas like real estate, in order not to spark inflationary forces in the Japanese economy.

That is a measure of restraint that could ultimately become the target for overseas lending, analysts suggest.

Faced with this lower growth, the Japanese banks "will have to increase the overall yield on their loans and other businesses. They will have to try a lot harder and make their assets sweat," said Stuart Matthews, analyst at Barclays de Zoete Wedd Securities (Japan) Ltd.

"The [Tokyo] banks will become much more choosy over their lending, and will become more risk averse. This will no doubt annoy even more of the big U.S. banks, which are similarly trying to improve the quality of their earning assets and meet [capital requirements]," he said.

In the United States, major Japanese banks have achieved rapid growth in recent years and now account for 12.1% of the country's banking assets. Part of this growth has been driven by the Japanese involvement in major leveraged buyouts, an activity from which they are expected to retreat.

Analysts said Japanese banks will likely remain a major competitive force in the United States but will grow at a much slower clip than the past.

"The Japanese won't want to restrain too much their lending to corporate America. They've made a huge investment in the middle market and retail market over the years in order to build up their presence. But they will probably fight shy of low margin business," said Simon Smithson, banking analyst at Kleinwort Benson International in Tokyo. ☐

S&L Junk Binge Figures to Give U.S. Indigestion

By BILL ATKINSON

The thrift junk bond crisis is just about over. Now it's the government's junk bond crisis.

If Columbia Savings and Loan Association, teetering on the edge of conservatorship, is seized, as is widely expected, most of the junk bonds bought by thrifts will be in the hands of the government.

Of the $10.7 billion in junk bonds held by S&Ls, the insolvent Columbia has the largest stake, with $3.7 billion at the end of December 1989. If the thrift is taken over by the Office of Thrift Supervision, the caretaker for sick and dying institutions, its portfolio is likely to be added to the Resolution Trust Corp.'s growing war chest of junk bonds, which was assessed at $3.7 billion at yearend 1989, according to Kenneth H. Thomas, president of K.H. Thomas Associates, a Miami, Fla.-based bank and thrift consulting firm.

ANALYSIS: *Follow-up on the news*

"It is the government's problem now," said Henry Peltz, a savings and loan analyst with Keefe, Bruyette & Woods Inc.

While some thrifts debate whether to wait for a market rebound, most most are continuing to shrink their junk bond portfolios. At yearend, S&L junk bond holdings dropped to $10.7 billion from $13.5 billion in September, according to K.H. Thomas. Thrifts now hold a 5% stake in the $220 billion high-yield, high-risk market.

But many of the largest junk bond holders, such as CenTrust Bank of Miami, San Diego-based Imperial Savings Association, and City Federal Savings Bank of Elizabeth, N.J., are already in conservatorship. Of the 25 largest junk bond holders, 10 are in conservatorship or receivership.

Junk Market Battered

Once the heralded vehicle for funding hostile takeovers and capitalizing start-up companies, junk bonds have taken a beating in the marketplace. Defaults from large issuers like Campeau Corp., and the recent failure of Drexel Burnham Lambert Inc., the New York brokerage firm that pioneered with junk bonds, have given investors the jitters.

S&Ls have been forced under the Financial Institutions Reform, Recovery, and Enforcement Act, passed last summer by Congress, to divest themselves of junk bonds by 1994, and regulators are urging them

Thousands of PCs to Do Job Of Banc One's Mainframes

By RICHARD LAYNE

NEW YORK — In a radical departure from the traditional approach to data processing, Banc One Corp. has decided to diminish its reliance on mainframe computers while elevating personal computers to a primary processing role.

The plan, formally adopted this week by Banc One's data-processing subsidiary, is designed to save millions of dollars a year in operating costs, increase total computing power, and let users easily pull information from any data base in the holding company's multistate network, according to David Van Lear, president of BankOne Services Co.

Mainframe Work Transferred

Banc One will continue to use the more expensive mainframe systems for data storage and large-scale transaction processing, but 50% to 90% of the work now handled by mainframes will be transferred to as many as 20,000 personal computers throughout Banc One and its subsidiaries.

"This is the wave of future," said Mr. Van Lear, the top-ranking technology executive at the $26.5 billion-asset holding company.

Linking personal computers in a high-powered network was studied by numerous corporations in the 1980s when personal computers became widespread, but only a handful of banks have set such interconnection as a goal. Units of Citicorp, BankAmerica Corp., and Mellon Bank Corp. are also in the vanguard.

Peggy Turbett

David Van Lear
BankOne Services Co.

Each has a slightly different approach, but all agree that this direction is essential to keep up with soaring demands for computing power. The approach is sometimes referred to as cooperative processing because of the way in which information is shared among networked computers.

The development is increasing the importance of networks in corporations' computer strat-

Court Backs Banks' Entry Into Stock Underwriting

By BARBARA A. REHM

WASHINGTON — The banking industry's power to underwrite corporate debt and equity securities withstood its first legal challenge Tuesday when a federal appeals court dismissed a suit filed by the securities industry.

The U.S. Court of Appeals for the District of Columbia let stand the Federal Reserve Board's January 1989 decision to let five banking companies underwrite corporate debt and equities through subsidiaries.

The case was the most recent in a series of suits the Securities Industry Association has filed – and lost – against the Fed, which gradually has been letting banking companies into the securities business since April 1987.

"We're delighted that the courts have once again sided with the banks on this critical issue," said Donald G. Oglivie, executive vice president of the American Bankers Association. "After at least eight related decisions in recent years, the courts show that the judicial tides are undoubtedly in favor of a more

Head Count Kept Flat at Top Banks in '89

By KENNETH CLINE
and L. MICHAEL CACACE

Spurred by a decline in profits, the top U.S. bank holding companies focused last year on curtailing operating expenses by limiting the growth of their workforces.

An *American Banker* survey shows that the nation's 100 biggest bank companies did not significantly expand their workforce last year despite a sizable increase in assets and an expansion of branch networks. (Statistical tables about the top 100 companies begin on page 10.)

The survey finds that employment growth rose a modest 1.7%, while assets and domestic branch networks last year grew by 7.5% and 4.7%, respectively. Meanwhile, earnings of the top 100 banks declined 28.6%, to $13.3 billion.

Acquisition Skews Figures

However, much of last year's workforce increase was attributable to NCNB Corp.'s Texas acquisitions, which added more than 13,000 employees to the bank company's workforce. Excluding NCNB, employment at the top bank companies was virtually unchanged last year.

Source: American Banker

"The banks are seeing their profit gains will come much more from expense control than from revenue growth," said James M. Rosenberg, a securities analyst with Shearson Lehman Hutton in New York.

Analysts predicted that major banks would continue to limit their employment growth again this year.

"I don't think there is any question in our minds this is an area that will be a focus for banks throughout 1990," said Thomas J. Romano, a senior vice president with New York-based Thomson Bankwatch Inc., an *American Banker* affiliate.

Jobs Fell Slightly in 1988

Employment at the top 100 banks declined slightly in 1988, after rising 4% the preceding year.

At the end of 1989, the top companies carried 1,065,556 employees on their payrolls,

COMMENT / *By Thomas Romano*

Examiners' Tough Stance Clouds Earnings Picture

For at least the last six months, we have had growing concerns about the prospects for domestic bank results for 1990. In large part, these concerns have focused on several areas perceived to be high-risk lending: namely, commercial real estate, highly leveraged transactions, and, for some, the ongoing LDC debt problem.

While the LDC problem has been resolved for all but a handful of banks, domestic loan quality issues (which have progressed much as predicted) have been complicated by a well-publicized change in the regulatory attitude toward bank examinations.

Fresh from their experience in the Southwest, examiners (particularly those from the Office of the Comptroller of the Currency) have clearly adopted more conservative and proactive policies with respect to the adequacy of reserves and the identification of problem credits. These stepped-up efforts have been most apparent in the examination of commercial real estate portfolios and particularly among banks operating in some of the more problematic areas of the country.

While the current problems in evidence in New England focus much of the attention on that region (with announcements by BayBanks and Shawmut), this phenomenon has by no means been limited to the Northeast. Recently completed examinations of Hibernia in New Orleans and Barnett Banks in Jacksonville, Fla., also resulted in meaningful but manageable actions to build reserves.

We fully anticipate more announcements of this nature as the "enhanced" examination process is more widely enforced.

Individual Rating Changes

From a rating standpoint, we believe that each of these announcements will be announced on a case-by-case basis, using our own assessment of the operating environment (i.e. real estate market) and how well an individual bank's portfolio will withstand the challenge presented by it. This will depend on the quality of a bank's underwriting qualities, loan mix, diversification, etc.

> **'Upward revisions in the stated level of problem assets or required reserve levels will not necessarily prompt rating action.'**

Undoubtedly, this process will yield some negative surprises and rating adjustments. However, upward revisions in the stated level of problem assets or required reserve levels will not necessarily prompt rating action, particularly if such revisions are viewed solely as a function of a "change in the rules."

One major concern we have is that a widespread and very conservative application of these policies could have a very real economic effect on the local markets, in which case the impact could prove self-fulfilling.

Impact in New England

Evidence of this is perhaps already evident in New England where Bank of New England, Bank of Boston, BayBanks, and, most recently, Shawmut, have gone through this exercise. As a result, these banks' lending efforts will likely become much more selective (for obvious reasons) and financing more difficult to secure.

We will continue to monitor these highly sensitive developments. From a rating standpoint, however, our actions will continue to be based on our perception of each company's fundamentals and ultimate risk. ☐

Mr. Romano is a senior vice president of Thomson Bankwatch Inc.

GRAPEVINE / *By Jed Horowitz*

Golden Handcuffs. Chemical Banking Corp. last fall initiated a "golden handcuff" program for 31 key employees, according to the bank's proxy statement.

The provisions would kick in upon a change of control, defined in Securities and Exchange Commission filings as one party's accruing a 25% stake. Insiders say the plan is generous for two reasons: the large number of participants and the potential payouts.

For three years the beneficiaries would receive their annual base salaries, calculated as 12 times their highest monthly pay in the year before a change of control, and a bonus equivalent to the highest bonus of the last three years.

The employment contracts cover chairman Walter Shipley, vice chairmen Robert Callander and Richard Simmons, and 28 other employees who were not identified.

A Chemical spokeswoman said the plan mirrors that of other big banks and is meant "to retain and attract key people," not fend off raiders.

Some skeptical insiders said the handcuffs might backfire. They could be attractive enough to persuade top management to consider a takeover bid.

* * *

Guess Who's Hiring? The Bank of New England may have crushed the plans of more than 5,000 employees when it announced layoffs last week, but the company is planning to hire in one area. "Part of this program envisions increases in staff in the credit area," bank chairman Lawrence Fish said in detailing plans to shrink total staff by one-third.

The troubled bank has apparently learned a lesson from regulators about the importance of credit quality. Mr. Fish said in an earlier interview that the company must upgrade its loan approval, loan administration, loan review, and – inevitably – loan workout. "We are definitely going to need to spend resources in these areas," he said.

* * *

Sullivan's Stake. It's called putting your money where your mouth is. Despite First Chicago Corp.'s earnings travails, chairman Barry Sullivan has substantially increased his stake in the company.

According to the bank's proxy statement, Mr. Sullivan's beneficial ownership of First Chicago stock soared to 367,188 shares at yearend, for a value of approximately $11.4 million. At the end of 1988, Mr. Sullivan owned 285,038 shares.

Two weeks ago, the company said it expected first-quarter earnings to plunge about 50% from the year-earlier period, largely because of higher loan-loss provisions for real estate, increased nonperformers, and lower venture capital gains. First Chicago sources, however, say the final number is expected to be a bit better than projected.

* * *

An Obsolete Buy List. When Montgomery Securities analyst Richard Fredericks likes a stock, he'll move mountains – or at least top management – to make his point.

The bank analyst, who is a partner in the San Francisco securities firm, took public umbrage two weeks ago when Mongtomery's "emphasis list committee" removed Wells Fargo & Co. from its list of 35 recommended stocks.

Mr. Fredericks, who was out of town when Wells was pulled, quickly penned a report reiterating a strong buy recommendation – to distance himself from his firm's "internal action."

"I got the whole firm to drop its emphasis list," Mr. Fredericks said in an interview last week. That's a major move. The emphasis lists are important marketing vehicles for many securities firms.

* * *

Capital Confusion. Banks attempting to meet new risk-based capital requirements have proposed some complicated instruments that puzzle regulators.

Andrew Spindler, a senior vice president of the Federal Reserve Bank, says some banks are trying to get complex new financial instruments to qualify as Tier 1 capital. Such moves, he said, are delaying regulators' attempts to refine the new standards and may prove fruitless.

Tier 1 is supposed to be "permanent" capital, Mr. Spindler told bank analysts at a recent conference. "If there are a lot of bells and whistles, we begin to suspect impermanence."

Banks have been asked to reveal their risk-based capital positions in call reports this quarter. The data will remain confidential until the capital standards take effect at yearend.

* * *

A Break for Money-Centers. The Comptroller of the Currency sent a clear message to the banking community last week: Targeted exams of real estate portfolios will continue and expand nationwide. That means more writeoffs, more reserves, and more hits to earnings, analysts said.

Big New York banks, however, are likely to fare better than large regionals. With the exception of Chase Manhattan Bank and Citibank, the Gotham giants are not national banks and can evade the Comptroller's oversight. (Other bank regulators have not shown the teeth exhibited by the Comptroller's examiners, and analysts said they are unlikely to do so for some time.)

The big banks also benefit from in-house regulatory staffs that keep them abreast of regulatory concerns. The regionals have few, if any, in-house overseers. "What could prove to be the differentiating factor," said one analyst, "is that large bank companies tend to be under continuous scrutiny."

* * *

Rocky Mountain Property. Donald K. Hogoboom wants to retire, so he's put his Citizens Bank of Westminster, Colo., on the block.

The institution is 10 minutes from downtown Denver, an admittedly competitive bank market. But it earned $448 million of pretax income last year, won a fairly high regulatory rating (Camel 2), and showed some decent ratios, a 1.3% pretax return on assets and 15.5% return on equity.

Niederhoffer and Niederhoffer is shopping the company. Mr. Hogoboom said he hired the New York investment banker after seeing some of its tombstone advertisements in newspapers.

Niederhoffer said it has received 50 calls about the bank since early March. A Niederhoffer official said he has heard from small and midsize banks and individuals in California, Colorado, Florida, and New York.

Colorado does not yet permit branch banking, but Mr. Hogoboom says bankers are lobbying hard for it. The state's interstate banking law takes effect next year.

Mr. Hogoboom said Colorado banks are unlikely to pay the price he wants, but he refused to reveal the asking price. ☐

Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. **Assets** and **Deposits** include all consolidated subsidiaries, both domestic and foreign. Data for 1988 are as reported in 1989 and have not been restated for acquisitions, mergers, or changes in accounting principals. **Banks Controlled:** includes only domestic commercial banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic commercial bank branches only. **(a)**— On Jan. 29 First Union Corp. acquired Florida National Banks of Florida. Had merger taken place on Dec. 31, First Union would rank 15th with $40 billion in assets. **(b)**— On Jan. 18, MNC acquired Equitable Bancorp. Had the merger taken place on Dec. 31, MNC would have ranked 28th with assets of $25.5 billion. **(c)**— On March 5, CoreStates acquired First Pennsylvania Corp. Had the merger taken place on Dec. 31, CoreStates would have ranked 34th with $23.5 billion in assets.

compared with 1,048,096 at the end of 1988.

"In this environment, where you've got asset quality pressures and lack of revenue momentum, the only place where you can really have direct (bottom line) impact is on operating expenses," said a Keefe, Bruyette & Woods Inc. analyst, James McDermott in New York.

The 7.5% growth in assets last year by the top bank companies was an improvement over the 4.8% growth rate achieved last year and the 1987 growth of 5%. Four of the top five gainers in 1989 were in the Southeast, reflecting the continuing strength of that region's economy as well as some major acquisitions announced last year.

Surge from Acquisition

NCNB, for example, raised its assets to $66.2 billion from $29.8 billion in 1988 by incorporating into its holding company all of FirstRepublic Bancorp, the insolvent Texas bank it acquired from federal regulators in 1988.

First Union Corp., based in Charlotte, N.C., now has $32.1 billion in assets and jumped from 22nd to 17th place in the *American Banker* rankings; had the 1989 numbers reflected its acquisition of Florida National Banks of Florida Inc., consummated in January, First Union would be the nation's 15th-largest bank.

Also increasing in asset size were Barnett Banks Inc., Jacksonville, from 25th to 23rd place, and SunTrust Banks Inc., Atlanta, from 20th to 19th place.

Outside the Southeast, Providence R.I.-based Fleet/Norstar Financial Group Inc. increased its assets by 15%, to $33.4 million, rising in the rankings to 16th place from 21st place.

Branch expansion at the top holding companies, meanwhile, slowed in 1989 to 5%, from 7.5% in 1988 and 9.4% in 1987. At the end of 1989, the largest banks operated 25,607 branches, compared with 24,380 at the end of 1988.

Securities analysts said the slower rate of branch expansion reflected the consolidation in the industry following the wave of acquistions in the past few years.

Some other survey findings:

- Total assets of the top 100 bank holding companies was $2.28 trillion on Dec. 31, 1989, up from $2.12 trillion a year earlier.

If it's true that "money talks," then The International Fund for Institutions offered by Shearson/Provident is multilingual. Through the expert management of Kleinwort Benson, our international equity fund just returned from Europe, Japan and the Pacific Basin with a total return of 23% for 1989. And that spells "success" in any language.

Outperforming International Indices

Not only did The International Fund reward investors with a 23% total return, it also outperformed Morgan Stanley Capital International's Europe, Australia, and Far East (E.A.F.E.) and World Indices.** So an investment in The International Fund can provide enhanced performance through diversification for you and your clients.

Created Specifically For The Institutional Investor

The International Fund was the very first mutual fund of its kind. It was designed to help trust officers achieve long-term capital appreciation through foreign investments without all of the administrative burdens. As a result, your clients can enjoy greater diversification—across industries, companies and countries—and more opportunities for capital appreciation.

Expert Guidance To A World Of Opportunity

The International Fund is managed by the experts at Kleinwort Benson International Investment Ltd., one of the most respected investment advisors in the world. Assisted by Provident Institutional Management Corp., these two industry leaders contribute to "The Shearson/Provident Advantage." A winning combination that has led to The International Fund's many successes.

Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. **Assets** and **Deposits** include all consolidated subsidiaries, both domestic and foreign. Data for 1988 are as reported in 1989 and have not been restated for acquisitions, mergers, or changes in accounting principals. **Banks Controlled:** includes only domestic commercial banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic commercial bank branches only. **(a)**— On Jan. 29 First Union Corp. acquired Florida National Banks of Florida. Had merger taken place on Dec. 31, First Union would rank 15th with $40 billion in assets. **(b)**— On Jan. 18, MNC acquired Equitable Bancorp. Had the merger taken place on Dec. 31, MNC would have ranked 28th with assets of $25.5 billion. **(c)**— On March 5, CoreStates acquired First Pennsylvania Corp. Had the merger taken place on Dec. 31, CoreStates would have ranked 34th with $23.5 billion in assets. **(d)**— On Jan. 2, Society Corp. acquired Trustcorp. Had the merger taken place on Dec. 31, Society would have ranked 41st with assets of $16.2 billion. **(1)**—The 1988 data are pro forma. The company was formed on 1/30/89, when Union National Corp., Pittsburgh, and Pennbank Corp., Titusville, merged.

	Total for Top 100 Firms of 1989	$2,283 Bil.	$2,124 Bil.	1,065,556	1,048,096

(★)— **A superregional banking firm,** which the American Banker defines as a nonmoney-center banking company with assets greater than $20 billion that has merged across state lines to establish a full commercial banking presence in another state. (†)— Classified as a money center bank in American Banker earnings performance studies, such as the listing that appears on page 18 of this edition. **Employees:** Full-time equivalent employees unless otherwise noted. ([1])— Formerly known as Indiana National Corp. ([2])— Estimated. ([3])— Formerly known as United Jersey Banks. ([4])— Employee data are for European American Bank. ([5])— The 1988 data are pro forma. Bank was formed on Jan. 30, 1989, when Union National Corp., Pittsburgh, and Pennbank Corp., Titusville, merged.

Sources of data: American Banker questionnaire and banks' yearend earnings releases. Top 100 earners based on net income for banks and bank holding companies. **Net income** is income after taxes and minority interest, but before preferred dividends, extraordinary items, and significant and unusual transactions. The 1988 net income is as reported in 1989 and has not been restated. **Adjusted net income** is net income excluding nonrecurring items such as gains (losses) from sales of buildings, branches, subsidiaries, securities sold to settle loans or debt; proceeds from equity/debt swaps; and venture capital profits (losses). All nonrecurring items are on an after-tax basis, wherever possible. **Please note:** Net income for 1989 and 1988 excludes the extraordinary credit resulting from the utilization of tax loss carryforward, whenever possible. **Profitability ratios** (on a GAAP basis, whenever possible): **(1) Return on assets** is net income, as defined above, divided by average assets. **(2) Return on equity** is the return on average common equity. **(*)**— Calculated by American Banker. **(1)**— This is ROA on a GAAP basis. The ratio reported by the bank was 1.01%. **(2)**— For the nine months ended 9/30/89. **(3)**— Pro forma. **(c)**— A multibank holding company. **(d)**— A one-bank holding company. **(e)**— A subsidiary of Bank of Tokyo Ltd. **(f)**— A credit card bank. It is a subsidiary of Dean Witter Financial Services Group, New York. **(g)**— A credit card bank. It is a subsidiary of American Express Travel Related Services Co., New York. **(h)**— An independently owned bank not controlled by a bank holding company. **(i)**— A credit card bank. It is a subsidiary of the $15 billion-asset Capital Holding Corp., Louisville, Ky., a company providing insurance and other financial services to individuals. **(j)**— A subsidiary of Sumitomo Bank Ltd., Osaka, Japan.

1989 ROA and ROE Ranks: banks' ranks among the top 100 earners in 1989. Banks with the same ROA or ROE receive the same rank and are listed in alphabetical order within peer groups. (a)— Classified as a money center firm for performance studies only. Otherwise it is classified as superregional.

Compiled by American Banker, copyright 1990.

Top 100 Banking Companies Focused on Limiting Job Growth in 1989

Continued from *page* **11**

- These banks also had $1.6 trillion in deposits, up 7.1% from $1.5 trillion on Dec. 31, 1988.

- The top 100 holding companies controlled 1,086 domestic banks at yearend, down 8.6% from the level a year before. However, the domestic branches controlled by the top 100 rose 4.7% last year to 25,532.

- The top 100 earners in banking – among banks and bank holding companies – had combined net income of $13.3 billion in 1989, down 28.6% from $18.6 billion a year earlier.

- A breakdown of the top 100 earners by asset size indicated that small institutions – banks with assets less than $5 billion – had a better year than their larger counterparts. Twenty-three banks with assets under $5 billion ranked among the top 100 earners last year, compared with 16 in 1988.

- Only five money-center banks were in the top 100 in last year, down from 10 in 1988. Also, the top 100 earners of 1989 included 20 superregional banks, down one since the year before; 22 large regional banks (assets between $10 and $20 billion), also down since 1988; and 30 smaller regionals (banks with assets between $5 billion and $10 billion), down two.

- Among the top 100 earners, Mellon Bank Corp., Pittsburgh, had the largest percentage gain in net income, 378%. Mellon ranked 23d in net income in 1989 with $181 million, compared with a net loss of $65 million in 1988, the sixth-largest loss in banking that year.

- The three largest losses in the banking industry last year were sustained by J.P. Morgan & Co., New York,which lost $1.28 billion; Bank of New England Corp., Boston, which lost $1.13 billion, and Bankers Trust New York Corp., which lost lost $980 million.

- Of the 20 largest losses in banking last year, five were incurred by New York-based money center banks; five by New England-based institutions; four by banks in the southwest; two each by banks in the west and in the mid-Atlantic states; and one each for banks in the South and Midwest. □

A breakdown of the top 100 earners by asset size indicated that small institutions – banks with assets less than $5 billion – had a better year than their larger counterparts.

Debit Card Suit May Be Settled

By YVETTE D. KANTROW

NEW YORK – MasterCard International and Visa U.S.A. have been given until June 1 to respond to an settlement offer in the antitrust suit filed against them last July by 13 state attorneys general.

The bank card associations were scheduled to appear Monday in U.S. District Court for the Southern District of New York to discuss abandoning their national debit card project – known as Entree – as part of a proposed settlement. But late Friday, they were given more time to discuss the terms.

The suit accuses MasterCard and Visa of hindering the development of debit cards to preserve the profitability of credit cards. It seeks to kill Entree and to force MasterCard and Visa to divest their interests in two prominent automated teller machine networks.

The attorneys general presented their original settlement offer in late September. It would allow the associations to keep their ATM interests if they agree to scrap Entree. The card associations initially had until November to respond and have since been granted several extensions. □

Lomas to Buy Servicing Rights

NEW YORK — Lomas Financial Corp. said its mortgage banking unit had agreed to buy a $3.5 billion mortgage-servicing portfolio and some other assets from Bright Mortgage Co., a Dallas concern under control of the government's Resolution Trust Corp.

The deal will increase the servicing portfolio of Lomas Mortgage USA by 17%, to $24.5 billion. Terms were not immediately available.

Jess Hay, chairman and chief executive officer of Dallas-based Lomas Financial, said, "Strategically the Bright portfolio acquisition is an important step toward the continued enhancement and growth of our core business, mortgage servicing."□

Washington Bancorp Posts Loss in Quarter

WASHINGTON — Washington Bancorp reported a first-quarter loss of $5.7 million, compared with a profit of $3.6 million a year earlier.

The $2 billion-asset bank holding company operates in Washington, Northern Virginia, and Maryland.

It also announced that WBC Acquisition Corp., which agreed to acquire the company early in March at $19.20 a share, no longer believes that the agreed upon price is appropriate in light of the company's first-quarter results. It said talks with WBC are continuing. □

Boston Bank Is Set To Sell Subsidiary

BOSTON — Bank of New England Corp. said it signed a definitive agreement to sell its New England Commercial Finance Corp. subsidiary to National Bank of Canada.

Included in deal was about $665 million in assets that were sold a premium. The transaction is subject to regulatory approval, and is expected to close by the end of April. □

For More information contact: (201) 802-1111 Fax: (201) 802-1255
LBK Computer Associates, Inc. 50 Park Place Newark, NJ 07102

The Shareholders and Associates of
Baskin Flaherty Elliott & Mannino, P.C.
Congratulate

Edward F. Mannino

on being named by *The National Law Journal*
as one of the "Nation's Top Litigators."

Specifically cited for his "enviable record
in corporate defense and lender liability
litigation," he was also identified as
"one of the preeminent attorneys in litigation
developing from bank and thrift failures
during the past several years."

Since only 10 lawyers in the country were
identified by *The National Law Journal* as "continual winners,"
we take special pride in saluting our
friend and colleague
Edward F. Mannino.

Sources of data: American Banker questionnaire and banks' midyear earnings releases. **Primary capital** is the sum of total shareholders' equity, mandatory convertible debt, allowance for possible loan and lease losses, and minority interest in equity accounts of consolidated subsidiaries. **Total capital** is primary capital plus secondary capital. **Secondary capital** is limited-life preferred stock plus qualifying debt. **The primary capital ratio** is calculated by dividing primary capital on Dec. 31 by total assets on Dec. 31, expressed as a percentage. **Note:** The American Banker ratio is not calculated in the same manner as the Federal Reserve Board ratio. The American Banker does not add back the allowance for possible loan and lease losses to total assets, as the Fed does. For most of the firms listed, the American Banker ratio will be from 5-to-20 basis points higher than the Fed ratio, depending on the size of the bank's allowance for possible loan and lease losses. The ratios, calculated on a regulatory basis, will appear in a study on Tier 1 and Tier 2 capital, which is scheduled for publication on April 19. (1)—Pro forma. **N.A.**— Not available.

SEC Probing Reported Leaks At First Chicago

By JED HOROWITZ

NEW YORK — The Securities and Exchange Commission has begun an inquiry into allegations that First Chicago Corp. leaked certain securities analysts sensitive information in advance of a press release projecting lower first-quarter earnings.

Some analysts said that the probe, which began this week, has the potential to change the nature of their profession. The SEC declined to comment on the inquiry.

The analysts worry that allegations that First Chicago improperly disclosed an impending increase in nonperforming loans could freeze the information flow that is their lifeblood. They said what they learned from First Chicago was the routine information their profession relies on.

ANALYSIS: *Follow-up on the news*

"I'm concerned that these youngsters at the SEC don't know what's normal and how I deal with banking companies," said Stephen Berman, an analyst at County NatWest Securities. "It would be an absolute disaster for the entire banking stock industry if they shut off the flow. These companies tell you little enough as it is."

Already some banks may be reconsidering how much they should disclose to analysts.

"I have had some indications that the legal departments of several major banks have raised the question about the level of discourse between their I.R. people and analysts," said Louis M. Thompson Jr., president of the National Investor Relations Institute.

Two analysts, who asked for anonymity, said Chase Manhattan Bank officials in recent weeks indicated a reluctance to speak to them in detail about earnings in light of the First Chicago incident.

"I'm not sure if they were joking," one of the analysts said. Chase spokesmen did not return calls for comment.

Shareholders File Suit

Certainly, the stakes are high. Earlier this week a lawsuit, which seeks class action status, was filed against First Chicago. The suit charges the bank with failure to disclose "adverse material information" and issuing "overly optimistic statements" before announcing that problem real estate loans would rise.

On March 29, First Chicago issued a press release projecting that its first-quarter earnings

Record Plan Set Up for CRA Loans

By SAM ZUCKERMAN

SAN FRANCISCO — In a move that could spur competitors to increase loans to low-income and minority groups, Security Pacific Corp. announced Thursday that it would spend $2.4 billion on "community involvement" activities in California over the next 10 years.

The program is the largest dollar commitment by any bank to date to meet the requirements of the federal Community Reinvestment Act. Los Angeles-based Security Pacific said that about 75% to 80% of the total will be used for affordable-housing loans.

The package includes small-business credits, minority contracting commitments, and more charitable contributions for community development.

The $83.9-billion asset Security Pacific is the second large California bank in recent weeks to announce a massive community affairs commitment. San Francisco-based Wells Fargo Bank, with assets of $48.7 billion, said last month it would lend $1 billion over seven years for community-development projects.

Texas Bank's Rebound Boosts Chemical Profit

By TOM LEANDER

NEW YORK — Boosted by tighter expense controls and a return to healthy profitability at its Texas banking unit, Chemical Banking Corp. said its first-quarter earnings rose 29%, to $151.7 million.

The big earnings spurt was aided, however, by a one-time gain.

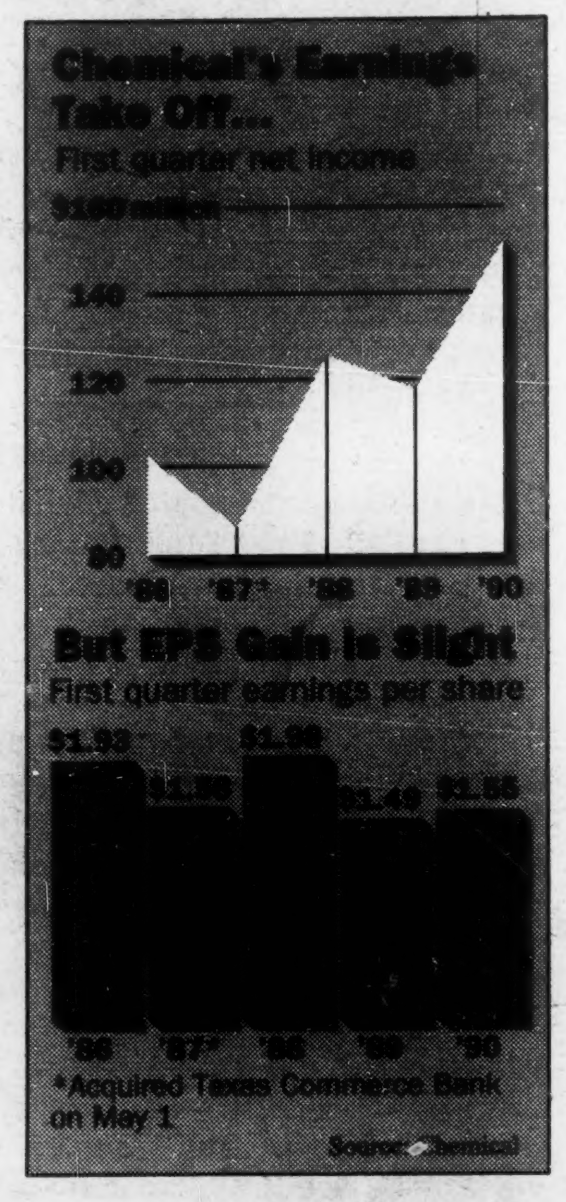
"The bottom line looks good," said Ronald I. Mandle, an analyst for Sanford C. Bernstein & Co. in New York, but he said the nonrecurring gain of $114.7 million from the sale of Chemical's share in Florida National Banks of Florida more than offset a $52 million first-quarter restructuring charge.

Investors Welcome News

Mr. Mandle estimated that, excluding the one-time gain, earnings were about $64 million, or 75 cents a share.

Nonetheless, coming when earnings at many big banks are expected to be held back by a rise in nonperforming loans, the news was welcomed by investors. They reacted by bidding up Chemical shares by $1.125, to $24.50, in midday trading.

Meanwhile, Bank of New York Co. reported $102 million in earnings for the first quarter, up only 1% from the year earlier quarter. Its shares fell 37.5 cents, to $31.375.



*Acquired Texas Commerce Bank on May 1

Behind the Scenes of a Meeting Between Business and Regulators

By ROBERT M. GARSSON

The hottest topic in banking now is whether tight regulatory scrutiny on real estate portfolios is spurring a credit crunch. And it has bankers, businessmen, and lawmakers scurrying to get the ears of examiners.

One such case was a breakfast session last week organized by Rep. Joseph Kennedy 2d, D-Mass. The meeting generated a heated discussion of the perceived side effects the scrutiny is generating in New England, according to participants.

The meeting at the Federal Reserve Bank of Boston brought together some 40 business executives, regulators, bankers, including the heads of Bank of Boston Corp., Shawmut Corp., BayBanks Inc., First Mutual Bank of Boston and Boston Bank of Commerce.

Oversight Criticized

John Gould, executive director of Associated Industries of Massachusetts, which represents 3,000 businesses, charged that the Comptroller of the Currency "is driving us right into a recession."

Some of the bankers present sided with complaints from the business community, according to participants. Ira Stepanian, chairman and chief executive officer of Bank of Boston, said the rules employed by the Comptroller's examiners are no different than in the past.

Louise Krafft

Rep. Joseph P. Kennedy 2d
Democrat of Massachusetts

Instead, the difference "is in how they interpret those rules," Mr. Stepanian was quoted as saying. "If they continue to interpret them as they are now doing in New England, there will

Bankers Backing Norton Buyout Seek Low Profile

By JOHN EVANS
and WILLIAM GOODWIN

Worried about a potential backlash, U.S. and foreign banks financing the hostile acquisition of Norton Co. by Britain's BTR PLC have asked that their identities be kept a tightly guarded secret.

Sources said the banks are concerned that disclosure of their role in the increasingly bitter takeover battle will trigger retaliation by Norton employees and other organizations in Massachusetts, where the U.S. plastics and ceramic manufacturer is based.

Barclays Bank PLC, which is arranging the acquisition financing, has already been subjected to demonstrations by Norton employees outside its U.S. headquarters in New York City.

In Worcester, Mass., Norton's hometown, employees have staged public demonstrations. But that may be only the beginning.

A grass-roots committee of Norton employees has been de-

COMMENT/*By Denis Manelski and Simon Nahnybida*

Back Offices Pose Problems For Bill-Payment Services

Telephone bill paying was introduced in the early 1970s as a consumer service. Later in that decade home banking was tested and offered by financial institutions. Industry experts projected that these services would provide convenient payment alternatives and would complement other electronic funds transfer mechanisms.

Credit cards, proprietary debit cards, automated teller machines, and point-of-sale terminals are displacing checks in substantial volume. However, telephone bill paying and home banking have shown, at best, limited success. In the early 1980s, 450 institutions offered these services; today it's just over 100.

Recently, new interest has been shown in both services. Old programs have been reactivated, and a variety of new service providers have entered the market.

Among the hurdles facing these service providers is the primitive back office supporting telephone bill paying and home banking. Banks, service providers, lock-box processors, and billers must solve the remittance-processing problem.

The Potential

Renewed interest in telephone bill paying and home banking stems from the benefits found in the automation of bill payment processing. These services have the capability of displacing 50% of the checks generated by consumers and small businesses. This represents a potential replacement of one billion checks a month with electronic transactions.

At present, telephone bill paying and home banking utilize four remittance-processing delivery options: check and list, direct send, the automated clearing house using the customer initiated entry format, or MasterCard's remittance-processing service.

Check and list is the most widely used remittance delivery option. This process requires the telephone bill paying and home banking service provider to combine all the payments for a particular biller; write one check for the total of the payments; produce a list detailing the customer's name, account number, and payment amount; and mail or deliver this output to the billers or their lockbox processors.

The check-and-list option is expensive to all parties, and it is error prone, resulting in high rates of inquiry to the consumer bill payment service providers.

A typical bank operation estimates check-and-list cost at 50 cents a payment, substantially more than the processing cost of the paper check. One percent of the payments sent out via check and list generate a customer inquiry, which costs an average of $20 to resolve.

Check-and-list payments are also a costly exception process to the billers. These payments cost the billers 25 cents to capture, versus 8 cents for a payment received with a scanable turnaround document. Billers must also respond to the numerous inquiries caused by this process.

Payments not delivered via check and list use one of the three electronic delivery options.

The direct send option is attractive only for high-volume billers. Under this option, the service provider creates electronic media output from the telephone bill paying and home banking bill payment system, and delivers or transmits directly to the biller. The service provider also credits the biller's account either by a book transfer, a wire transfer, or via the ACH. This option requires that transport, customized formats, and processing arrangements be in place for each biller.

The Automated Clearing House delivers payments under prearranged conditions to the biller's banks. Approximately 25 billers can be reached through the ACH.

MasterCard's remittance-processing service also delivers payments electronically to a growing list of billers. About 60 billers can be reached this way.

All three electronic delivery options provide the back office with inexpensive and error-free processing. They also fulfill the customers' expectations of rapid payment delivery.

Expectations are that both telephone bill paying and home banking will grow quickly in this decade.

But bill-paying services were pioneered 20 years ago, and today one can reach only 60 billers electronically via the automated clearing house or MasterCard service. Meanwhile, hundreds of thousands of billers support a bank service in a major market.

Major billers must be educated about the growing opportunity for improved cash flow and operating services. Lock-box service providers should leverage this by consolidating electronic concentration with their traditional payment processing.

Success in marketing the telephone bill paying and home banking services will backfire if we don't respond quickly to the remittance delivery problem. ☐

Mr. Manelski is executive vice president of U S Tel Inc., Greenwich, Conn., and Mr. Nahnybida is vice president of MasterCard.

FUNNY MONEY/*By Tom Leander*

Art Exchange

It's not every day that a pending swap deal makes it into the tabloid gossip columns.

Columnist "Suzy" of the New York *Post* reported that Sir Humphrey Wakefield, an art specialist acting on behalf of Britain's National Trust, was negotiating with an unnamed bank for the return of three tapestries woven in 1690. The tapestries once hung in Uppark, an ancient manor house undergoing restoration by the National Trust.

The bank turns out to be Chicago's American National Corp., owner of an art collection. It bought the tapestries years ago. Gerald Kolbaba, the bank's art custodian, confirmed the negotiations. He said American National is willing to return the tapestries if the British government exchanges them for three of equal value.

Damage Control

As real estate loans continue to haunt lenders across the nation, bank examiners are holding banks and thrifts to more stringent standards.

The National Council of Savings Institutions is riding to the aid of its members with just the type of program that might be expected from a proactive trade group. It will sponsor a self-help seminar,"The Regulatory Examination: How to Get Better Results," on April 17 in New York.

The seminar is intended to help thrift executives control the damage as examiners make a beeline for their books. One purpose of the session, according to the group's promotional flier, is to "minimize criticisms that are inherent in every examination."

* * *

Pitching Curveballs

To mark the opening of baseball season, the Federal Home Loan Bank of New York issued "Casey at the Bat" in the form of a press release. The baseball poem, a perennial favorite penned in 1888 by Ernest L. Thayer, ends on a melancholy note for fans of the mythical Mudville team:

Eugene J. Sherman

"*But there is no joy in Mudville – Mighty Casey has struck out.*"

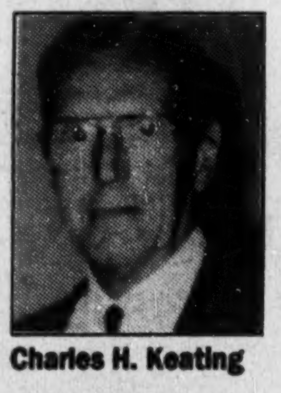
Eugene J. Sherman, chief economist of the New York district bank, tacked on a "post-game analysis," second-guessing the way the opposing team should have pitched to Casey the power hitter.

Asked if there was a financial angle to his analysis, Mr. Sherman replied: "Just because you're an economist, you don't have to spend every moment on the job gauging interest rates."

* * *

Voice from the Ruins

From his vantage point at the center of the most widely reported thrift debacle, Charles H. Keating has no qualms about telling regulators how to sell the assets salvaged from his financial empire.



Charles H. Keating

The former chairman of the failed Lincoln Savings and Loan Association took aim at the government Monday, at a pretrial hearing in Washington. Mr. Keating assailed the way regulators are managing Lincoln's assets, particularly the luxurious Phoenician resort near Phoenix.

The regulators wrested control of the resort from Mr. Keating last September. Lincoln invested $275 million in the resort, Mr. Keating says, and recouped $170 million from the sale of a 45% stake to a Kuwaiti investment group.

Mr. Keating values the property at a minimum of $350 million. But the government is trying to find a buyer for the Phoenician at about $99 million.

"That's sick," he said. "It hurts me that this asset could be sold at this price."

Updating the Image

While Swiss banks generally cultivate their image as bastions of conservatism, Swiss Bank Corp. has flirted with the avant garde by installing a 14-foot by 18-foot sculpture by artist Richard Serra.

That's the same Richard Serra whose famous "Tilted Arc" was removed from the plaza of the Jacob Javits office building in downtown New York after employees in the building protested that the huge sculpture blocked their path.

With considerable fanfare, Swiss Bank recently hoisted Mr. Serra's "Fin" into place. The work – described by the artist as a "slowly curving concave arc" – will adorn the Swiss Bank Tower, a nearly completed building on Manhattan's 50th Street that will serve as the bank's U.S. headquarters.

But "Fin" is not likely to generate controversy. It will repose safely out of the employees' way on the 11th floor of the building's sky lobby. ☐

S&Ls Boost Servicing Rights

But Experts Expect Growth to Wane in '90

By PHIL ROOSEVELT

NEW YORK — In what may prove to be the last blast of growth for some time, the top 50 thrifts in servicing mortgages for investors boosted their portfolios by 17% last year, to $229 billion, an *American Banker* study found.

The growth rate of these leaders was well ahead of the 10.8% posted by all savings and loan associations in servicing for investors.

Proposed Capital Limitation

But experts said that many thrifts are now curbing the growth of their servicing portfolios; they are concerned about a proposed rule that would limit the amount of purchased servicing rights that banks and thrifts could count as capital.

Such a rule is under consideration at the Federal Deposit Insurance Corp., but final action is not expected before late spring. In a 60-day comment period that ended Tuesday, the agency received about 70 letters, an FDIC spokesman said. The comments have yet to be analyzed, he added.

In servicing, thrifts and others earn fees by funneling monthly payments from mortgage borrowers to investors. Servicers also handle tax and insurance payments and are responsible for initiating foreclosures.

Thrift Bailout Law a Factor

In recent years, some thrifts have grown rapidly in the field by purchasing servicing rights from other lenders. But certain provisions of the 1989 thrift-bailout law, coupled with the pending FDIC rule, have erected obstacles to many of the most active buyers. Under the FDIC proposal, purchased servicing rights can make up only 25% of core capital.

"A lot of big buyers in the thrift industry are sitting on the sidelines waiting for the outcome of the FDIC proposal," said Daniel Thomas, a vice president at Cohane, Rafferty Securities Inc., a servicing brokerage based in Harrison, N.Y.

Princeton, N.J.-based Cenlar Federal Savings Bank, a big buyer of servicing rights in recent years, has made no purchases since June, said David Marshall, a senior vice president at Cenlar.

Late '89 Decline at Cenlar

He added that much of the 28% growth in Cenlar's servicing portfolio last year came from purchases initiated in 1988 but not completed until early 1989. Cenlar's servicing portfolio actually declined during the second half of the year.

Among the top 10 thrifts in the field, Glendale Federal Savings and Loan Association, Glendale, Calif., posted the largest gain for the year. But its 117% increase mainly reflected a move to consolidate a mortgage unit into the thrift, said chief financial officer David Hansen.

In the past, the *American Banker* has published yearend servicing data for both thrifts and mortgage companies. This year, mortgage companies are being excluded. But complete midyear rankings of banks, thrifts, and mortgage companies will appear in October, and related data may be published in the interim. □

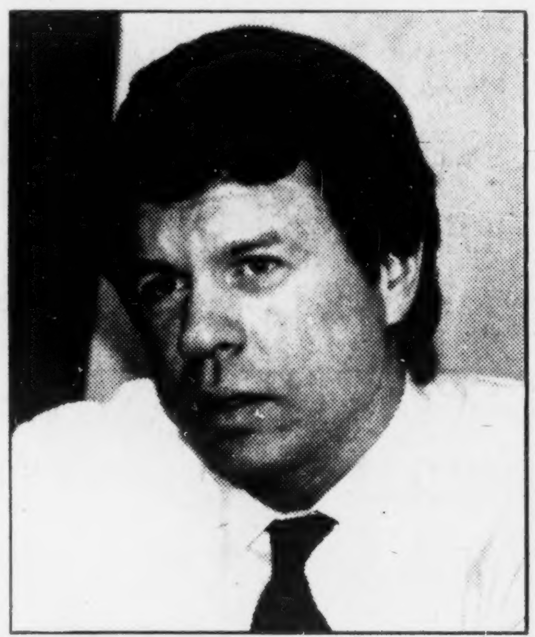
Remic Manager At Freddie Mac Reviews Growth

Mark J. Latimer, 39, is a senior vice president of the Federal Home Loan Mortgage Corp. He oversees Freddie Mac's issuance of real estate mortgage investment conduits, or Remics. In 1989, Freddie Mac issued $40 billion of Remics, up from $13 billion in 1988. Mr. Latimer was interviewed by the American Banker's *Phil Roosevelt.*



Peggy Turbett

Mark J. Latimer
Freddie Mac

Q: Is it true that most new pass-throughs issued by Freddie Mac are winding up as collateral for your Remics?

LATIMER: That's correct. The logic has to do with the need of investors for specific cash flows. With Remics, they can find the maturity that meets the specific needs of their liability strategies.

Q: Has the appetite of the thrifts for Freddie Mac securities changed in the wake of the bailout law.?

LATIMER: There's been a dramatic change. If you just look at the amount of Remics they purchase, it was 20% of our issuance in 1988 and that's now been cut in half, to less than 10%. It's the need to shrink assets to meet the requirements of FIRREA, and the drop in the number of thrifts.

Q: Who has taken up the slack?

LATIMER: Fortunately, a lot of people - commercial banks, pension funds, and insurance companies, to name just a few.

Q: How strong is the overseas buying?

LATIMER: The international market, I would estimate, has held 1% to 2% of our securities historically. Today, on an incremental basis, I would say they're purchasing between 5% and 10% of our issuance. □

TALKING *markets*

Adjustables Popular in Northeast, Poll Says

California may be the U.S. home of the adjustable-rate mortgage, but some of the loan's biggest fans are in the Northeast.

A survey by Chicago Title & Trust Co. shows that 41.2% of northeastern homebuyers chose adjustables last year, well above the nationwide average of 33.1% and slightly ahead of the West's 40.4%.

Moreover, as a trend toward fixed-rate loans swept the country, homebuyers in some Northeast cities actually increased their reliance on adjustables. In New York, 52% of buyers went with adjustables, up from 38.9% in 1988, according to the survey.

That put the Big Apple in a league with Los Angeles (49.5%) and Orange County, Calif. (55.2%). California is home to the nation's largest thrifts, which pioneered adjustable mortgages and continue to specialize in the loans.

Why are adjustables a hit in New York? Buyers may have needed the initial discount typical of adjustables in order to qualify for loans, said John Pfister, a vice president at Chicago Title. "It looks like the first-time buyers in New York were those that were really straining" to afford a home, he said.

Dime Savings Bank of New York, one of the area's largest mortgage lenders, specializes in adjustables. "We had a very high number of ARMs in 1989 - about 90% of all our originations," said Savid Totaro, first senior vice president at the thrift.

Some other New York lenders, however, said the market seemed to lean increasingly toward fixed-rate loans last year.

Certainly, fixed-rate loans gained ground nationwide last year, as their interest rates dipped below the psychologically important 10% level. The number of buyers taking adjustables declined to 33.1% last year from 41.8% in 1988, according to Chicago Title.

According to Chicago Title, adjustables are least popular in the South. Only 18.2% of buyers used the loans last year, down from 29.9% in 1988.

— Phil Roosevelt

Key Interest Rates

	Week ended 4/6/90	Week earlier 3/30/90	Year earlier 4/7/89
30-year fixed-rate mortgage	10.34	10.31	11.20
1-year adjustable-rate mortgage	8.47	8.48	9.39

Rates are based on a weekly survey of 2,000 lending institutions nationwide. The averages reflect rates for a range of loan sizes.

Exams May Spur An Underclass Of Bank Stocks

By GORDON MATTHEWS

NEW YORK — The stock market's treatment of bank stocks in the past six months has been as ruthless as the behavior of a general who takes no prisoners. But stiffened regulatory examinations may spark a new order in which confidence in some banks replaces fear of the unknown for all.

Many bank analysts who had criticized regulators as part of the problem are coming to view their strong medicine as the tonic needed to improve the deeply negative market psychology beleaguering bank equities.

ANALYSIS: *Follow-up on the news*

Some see a distinct two-tier market emerging soon. The stocks of banks that clear the regulatory hurdle with little or no damage, they say, would be set apart from those with management and loan underwriting practices exposed as inferior.

This division of winners from losers may offer a picture of which institutions will become acquirers and which, targets. Market capitalization and financial strength, rather than interstate barriers, will soon be the biggest factors in the continuing industry consolidation.

Exams' Benefit to Investors

"Painful and overzealous as recent bank examinations may be, their benefit to [the] bank stock investor cannot be overlooked," said Robert Albertson, a banking analyst for Goldman, Sachs & Co. "The net effect is to eventually remove uncertainty in an industry whose low price-to-earnings multiples reflect an opaque mask on credit quality."

"When the smoke settles, those institutions that have come through these exams unscathed should enjoy much greater confidence from investors," agreed Lacy M. Shockley, an analyst for Smith Barney, Harris Upham & Co.

Ms. Shockley said she feels the two-tier market already exists in embryonic form. Shares in the better quality banks are unlikely to drop much further, she said, but the stocks of vulnerable banks could weaken further.

Extraordinary Weakness

Despite a modest rally last week, bank stocks in general have rarely cost less compared to other stocks.

The index of 24 money-center and regional banks maintained by Keefe, Bruyette & Woods Inc. fell 24% in the fourth quar-

A Grammar Of Lending Takes Shape

By YVETTE D. KANTROW

NEW YORK — As loan portfolios come under closer regulatory scrutiny, banks and other financial companies are moving to improve the quality of their credit data by standardizing the way lenders, borrowers, and credit bureaus communicate with each other.

If the effort by a standards-setting committee is successful, consumer and business lenders would adopt uniform terminology and data formats when exchanging information about borrowers. Participants in the project say standardization would make credit decisions faster and easier, reduce administrative costs, and help lenders assess the overall condition of their portfolios.

Smoothing Asset Sales

Another aspect of the project will streamline communications among participants in the asset-sales market. Standard communications between issuers and investors in asset-backed securities could reduce the cost of participating in that burgeoning market.

"There are some formats [for credit transactions] now, but a lot of the data content has different meanings," said Cindy Fuller, administrator for the financial-industry standards committee coordinating the project. "When the British say boot, they don't mean a shoe," she added. (In Britain, a boot is the trunk of

Florida Bankers Rally For Insurance Powers

By YVETTE D. KANTROW

NEW YORK - Buoyed by strong consumer support, the Florida Bankers Association has launched a massive campaign for legislation to allow state banks to sell insurance.

The effort is strongly opposed by Florida's influential insurance lobby. It is being closely watched by bankers nationwide who are locked in similar battles for expanded powers.

"Florida is definitely in the forefront of states with the strictest insurance laws," said Kevin E. Crowe, chairman of Essex Corp., an independent vendor of insurance products in New York. "If the [Florida] bankers are successful, bankers in other states will take up the same crusade."

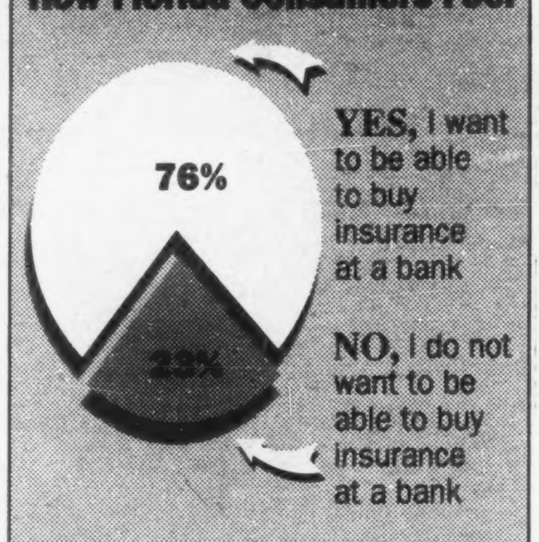
The Florida bankers are looking for powers similar to those won by California banks in 1988, when a referendum known as proposition 103 allowed that state's chartered banks to sell insurance.

A battle shaping up in Delaware could also be a key to further expansions of banks into the insurance business. A proposed bill would allow Delaware-chartered banks - inlcuding credit card affiliates of major money-center and regional banks - to underwrite and sell insurance nationwide.

Review of Existing Law

Florida is one of about 15 states that prohibit bank employees from obtaining licenses to sell insurance. But because of a process known as "sunset" review, those laws could expire this year.

Insurance and Banking: How Florida Consumers Feel



Based on the responses of 66,000 Florida consumers

Source: Florida Bankers Association

Under sunset review, Florida lawmakers are periodically required to review the state's business regulations, ensuring that they are still necessary and that they serve the public interest. If Florida's insurance laws are not rewritten or reenacted during this legislative session - which runs from the first week in April to the first week in June - they will "sunset" or die on Oct. 1.

Annuities Make Wish List

Lewis Carr, a senior vice president in charge of state government relations for the Florida Bankers Association, said it is unlikely that the code prohibiting banks from selling insurance will be totally repealed.

Instead, the state bankers are lobbying for a compromise bill that would increase the number

COMMENT/ By Paul Nadler

Ethics Questions Are Raised When a Star Trainee Defects

"I was cheated," the human resources director at the bank complained when he learned that Gridley (name changed to protect the guilty) had resigned to take a job at another bank – at a much higher salary.

Why the fuss, since people move on every day? Gridley was different.

He had come to the bank as an uneducated 17-year-old from an immigrant family. The bank had trained him and paid for his college education. Staff had spent countless hours teaching him how to do his job.

In many cases it would have been easier for the human resources professionals to do a job themselves than to bring Gridley up to snuff. But they did it.

Free Enterprise at Work

Now, Gridley was a college graduate, a full member of the team who could pull his own oar. Two months later, he quit.

"That's what free enterprise is all about," some observers would say. Gridley had found a better opportunity.

But doesn't Gridley owe something to the bank for all the time and money it spent to make him into a valuable employee? Shouldn't his sense of obligation outweigh a salary differential – at least for a while?

Other industries have learned to spell out the obligations of employees they pay to educate. I remember when American Airlines made pilot trainees sign an agreement to stay a set number of years after completing the program – or else repay the high cost of their education.

Spelling Out the Terms

Many MBAs whose employers pay for their degrees have to sign similar agreements to stay on a certain amount of time after graduation. Similarly, the U.S. service academies require a set number of years of military service after graduation.

Why can't a banking company require the same loyalty? Is this indentured service? Is it unconstitutional? Those are tough questions. Look at the issue from the viewpoint of the human resources manager.

"I'll never again take a chance on training an immigrant," he responds. "I'll let someone else teach him how to speak and act and function in our society. Then I'll hire him and save the tremendous cost of the training we gave Gridley."

'Other industries have learned to spell out the obligations of employees they pay to educate.'

The human resources manager is really saying: "Let the schools do it." But the American educational system in the 1990s clearly can't do it. Our schools are failing in many areas.

As one insurance company executive put it: "We have to use college graduates in our cities in the East to do what we can do with high school graduates in the smaller cities of the Midwest."

I recently visited a major New York bank where the officers had proudly promised I would see state-of-the-art technology in customer service.

I came in expecting to see something that would knock my socks off. Instead, I was sadly underwhelmed. The machines could only give the platform people rates on bank services, rates on the competitors' services, and other simple information. I thought any platform officer could have have dug this material out of a leaflet in a matter of seconds.

"What's so great about this?" I asked. By using these machines with their central files, I was told, the platform banker could obtain information the customer would want without needing to know how to read a manual or perform simple calculations.

Here was the "no brainer" approach to being a contact banker. With New York's educational problems, I began to understand why this bank was so proud of its technological accomplishments.

It may seem cruel to force people like Gridley to stay a few years after being trained – especially if other employers are willing to pay more for his service.

But if Gridley does not owe something to the bank that trained him, no bank will take the risk of hiring an uneducated Gridley in the first place any more. That would dash all our hopes that businesses can help solve this nation's learning problems.

Given this choice, the lesser evil might be to force those who are trained by banks and others to stay until they have paid back their training costs – along the lines of an educational loan. Otherwise, we will be forced to turn away those whom our educational system has already disappointed or failed. ☐

Mr. Nadler is professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

A shareholder of First Chicago Corp. sued the company last week, alleging that the parent company of First National Bank of Chicago had failed to disclose "adverse material information." First Chicago issued a press release on March 29 projecting a 50% decline in first-quarter earnings from a year earlier and a rise of $150 million to $160 million in its loan-loss provision. But the company had already indicated to some analysts, more than a week earlier, that its nonperforming assets would be higher than expected. Joseph L. McCarthy of the *American Banker* features staff asked:

Q *What kinds of information should a company be obligated to release to the public, and when?*

■ Thomas P. Vartanian
Attorney
Fried, Frank, Harris,
Shriver & Jacobson

A company is obligated to disclose all material information. But what, exactly, constitutes materiality has much to do with the timing of a disclosure.

For example, if you had an audit going on, and it was possible that the audit was going to turn up information about bad loans, you might decide to cancel a meeting with analysts – even though the cancellation itself might have an impact on analysts' assessments. Alternatively, you might decide to make a public disclosure about the loans before the planned meeting.

In any case, disclosures should be made so that all parties are equally and fairly advised on the material.

■ Louis M. Thompson
President
National Investor Relations Institute

There are no bright lines of materiality. The baseline used by courts has been that if a piece of information would cause a reasonable investor to buy, sell, or hold stock in a given company, that information is likely to be material.

In 1976, the Securities and Exchange Commission passed the Safe Harbor Provision, in an attempt to prompt companies to forecast their earnings situation and thereby keep Wall Street more accurately informed.

If an analyst calls to try to get a feel for what your earnings will be, and you think he's outside a certain range, you may guide him back into a more realistic range without actually giving him any specifics.

Some people might say: 'Aren't you giving the securities houses an advantage over individual investors?' My answer to that is no. By this process, you keep Wall Street advised, so there are relatively few surprises. That benefits everyone.

What a company cannot do, however, is to selectively disclose material information. Examples of material information might include a merger or acquisition, or an indication of a significant writeoff.

■ Ronald Berenbeim
Senior research associate
Conference Board

Anything an investor relations person says to an analyst should be public information.

Of course, analysts make their money by obtaining information that is not widely circulated. And a good analyst can talk in general terms with a bank and come up with some useful projections.

It is a matter of specificity. If the analyst does a fair amount of independent research and asks questions – such as: 'Real estate is an industrywide problem, and you have a lot of loans on your books. Are you expecting trouble?' – the investor relations person must give some kind of direction. They are taught not to lie and not to cause too much undue alarm.

■ George M. Salem
Banking industry analyst
Prudential-Bache Securities Inc.

Some people define materiality as something that constitutes a certain percentage of a company's earnings, but I think a more commonsense definition is anything that can change a person's mind about buying or selling a stock.

First Chicago claims that because they hadn't quantified the amount of their problem loans, that prevented them from coming out with a press release. If that's the case, they should have taken a two-step approach, first saying that they had a problem but couldn't quantify it, and later quantifying it – instead of letting several analysts come in for a briefing and keeping everyone else in the dark.

I don't want to play lawyer here, but it seems to me that First Chicago erred. Of course, if you carry this thing to an extreme, no company official would be able to say anything to an analyst or a member of the press.

But I think there's a middle ground here. Management should be allowed to put out enough directional clues to allow a good analyst to piece together his own outlook for a company. ☐

Some See Fed Cutting Rates To Boost Yen

Reuters

NEW YORK — The Federal Reserve has introduced an element of uncertainty into its policy intentions after four months of nearly unquestioned devotion to steady interest rates.

Most economists said they believe the Fed is still on hold, not swaying from an 8¼% federal funds rate target.

But a small group are suggesting the Fed, yielding to political pressure, may be willing to ease rates a bit to help the yen. The Japanese currency has fallen sharply against the dollar during 1990, and this has seriously disrupted the Tokyo markets.

Fed Injects Liquidity

The Fed's unusually heavy injection of liquidity into the banking system in the past week prompted this speculation. Much more liquidity was injected than economists had expected.

Most of the reserves came in the form of an aggressive open market purchase of Treasury bills for delivery the first day of the latest reserve period.

Economists said that, if the Fed was intent on adding reserves to ease rates, now is a good time to camouflage the move. The Fed ordinarily adds permanent reserves to the banking system at this time of year in anticipation of heavy bank withdrawals to pay individual income taxes in mid-April.

Admittedly, said Steve Slifer, an economist at Shearson Lehman Hutton Inc., the theory sounds a bit farfetched.

Historically, the Fed gives a lesser priority to currency targets than to domestic economic considerations. And for the most part, economists believe that the 8¼% fed funds rate adequately addresses the Fed's program of maintaining modest economic growth and not fueling inflation.

$4.9 Billion Question

But Mr. Slifer asked how else can one explain the $4.9 billion in Treasury securities the Fed bought in the open market and from other central banks in the past week.

Proponents of the theory suggested that the Fed is yielding to political pressure to support the yen by making the dollar less attractive.

The yen has fallen nearly 10% against the dollar since Jan. 1.

Firmer Rates Expected

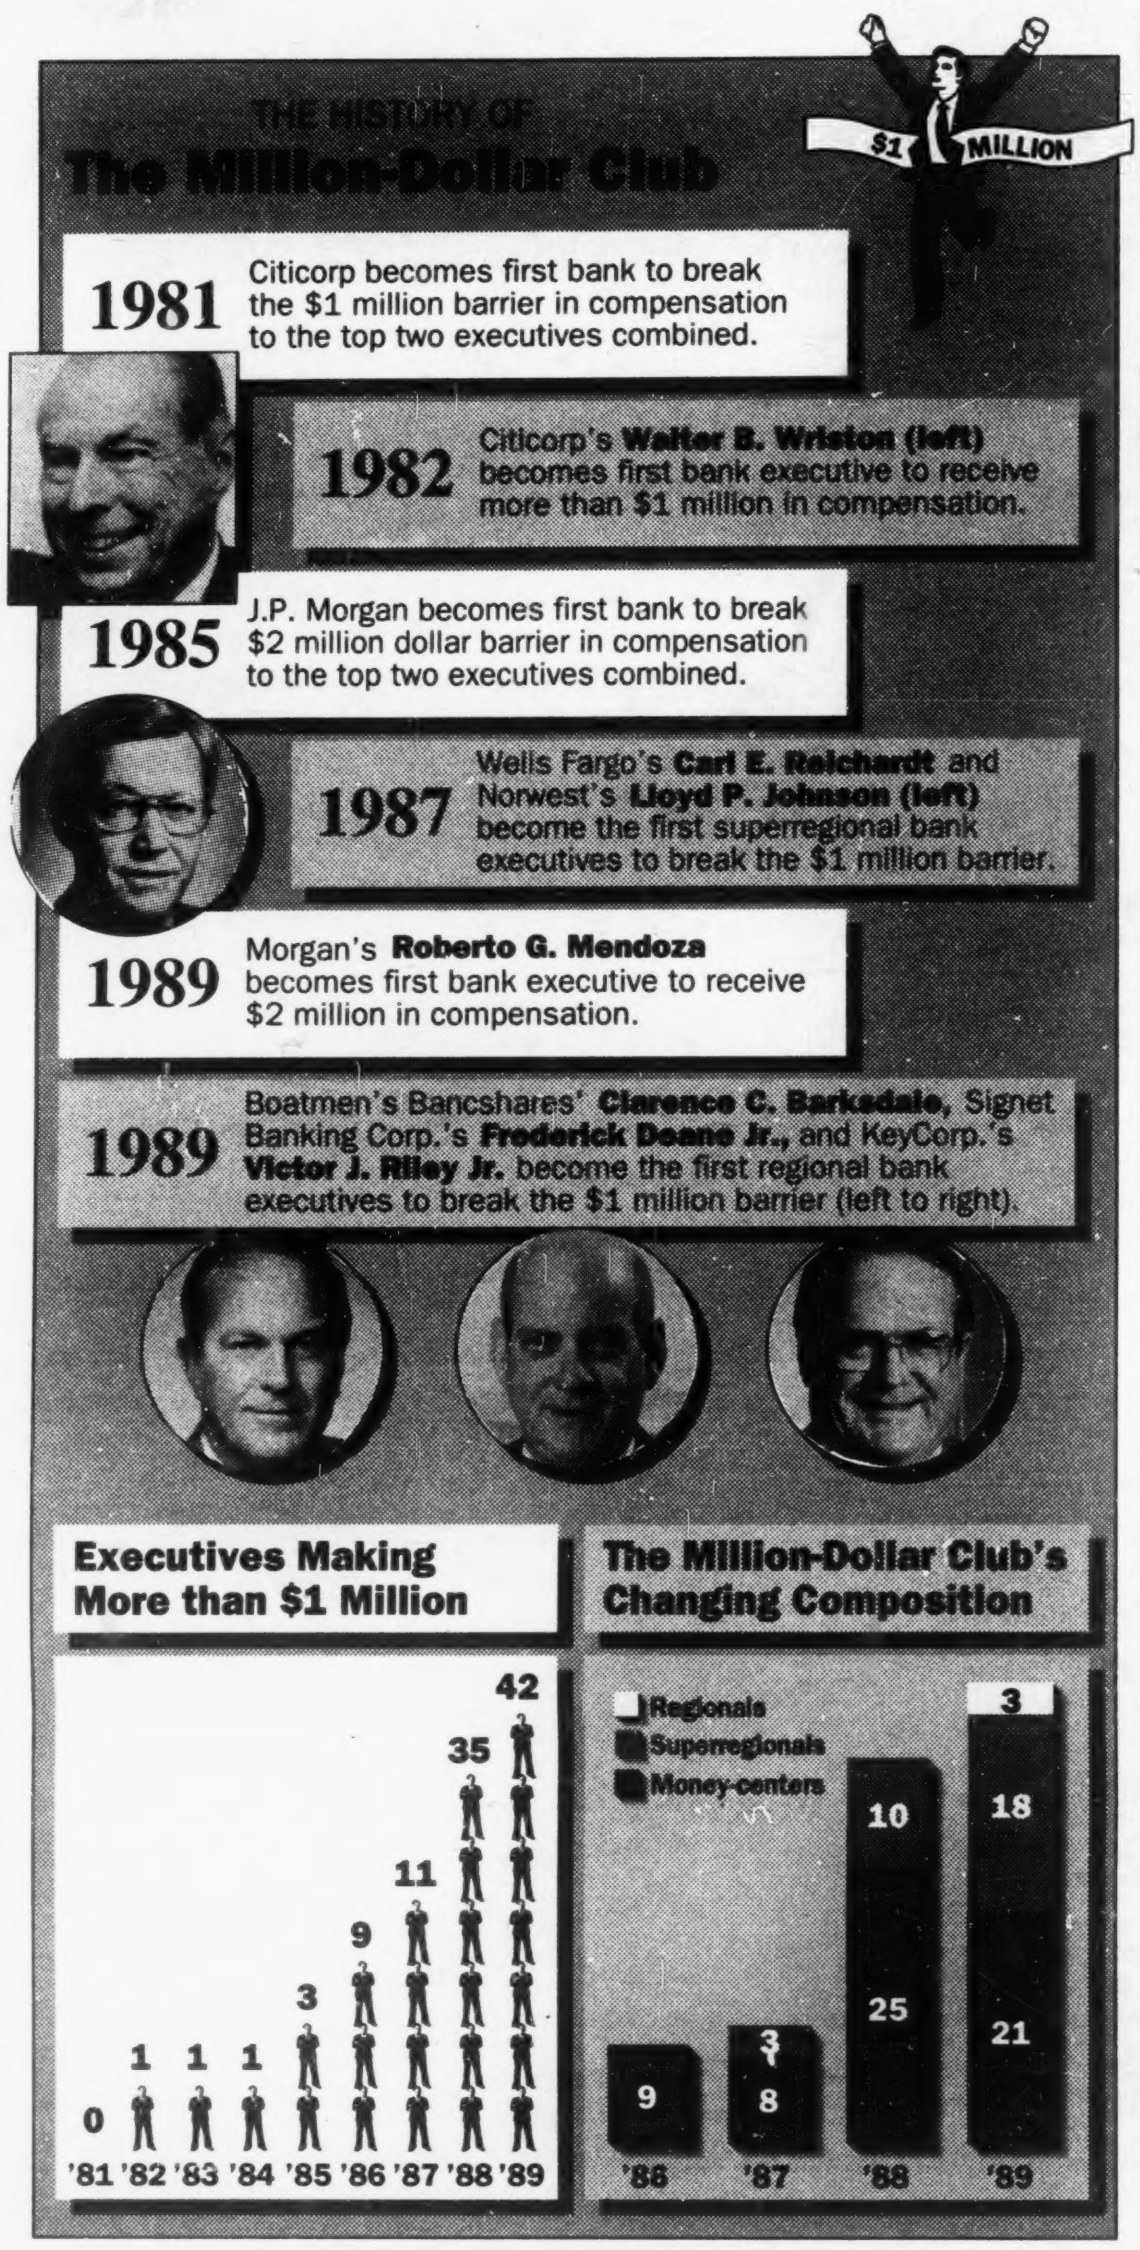
Opponents of the theory said the Fed would never jeopardize the domestic economy in favor of propping up a foreign currency. They suggested the Fed was willing to tolerate a softer funds rate for a day or two last week in anticipation of a firmer rate this week, when tax payments are made.

"The [Treasury] bill pass," said economist Robert DiClemente of Salomon Brothers, "was basically to accommodate larger seasonal demands for currency in circulation and deposit flows that come around tax time." ☐

THE HIGHEST-PAID BANKING EXECUTIVES

Regional Bankers Winning a Share of the Gold

By L. MICHAEL CACACE



THE HISTORY OF

The Million-Dollar Club

1981 Citicorp becomes first bank to break the $1 million barrier in compensation to the top two executives combined.

1982 Citicorp's **Walter B. Wriston (left)** becomes first bank executive to receive more than $1 million in compensation.

1985 J.P. Morgan becomes first bank to break $2 million dollar barrier in compensation to the top two executives combined.

1987 Wells Fargo's **Carl E. Reichardt** and Norwest's **Lloyd P. Johnson (left)** become the first superregional bank executives to break the $1 million barrier.

1989 Morgan's **Roberto G. Mendoza** becomes first bank executive to receive $2 million in compensation.

1989 Boatmen's Bancshares' **Clarence C. Barksdale,** Signet Banking Corp.'s **Frederick Deane Jr.,** and KeyCorp.'s **Victor J. Riley Jr.** become the first regional bank executives to break the $1 million barrier (left to right).

Executives Making More than $1 Million

The Million-Dollar Club's Changing Composition

NEW YORK — Regional and superregional banks have been gaining on money-centers in recent years, and the salaries they pay their top executives are starting to reflect this trend.

Last year, 42 bankers were paid $1 million or more – and, for the first time, half were from superregionals and regionals. By contrast, in 1988 only 10 of the 35 bankers the "million-dollar club" were not from money-centers.

An *American Banker* review of proxy statements found that a modest decline in executive compensation at money-center banks was more than offset by sharp pay hikes at superregional and regional companies. That resulted in a net increase of seven bankers paid $1 million or more.

A Long-Term Trend

"Executive pay at the superregional and regional banks is improving and reflects the long-term trend of better performance of these banks compared with money-center banks," said J. Lee McCullough, partner of the Hay Group, an international human resources consulting firm.

The highest-paid bank executive last year – and the first ever to be paid more than $2 million – was Roberto G. Mendoza, the 44-year-old vice chairman of J.P. Morgan & Co.

Mr. Mendoza, a new member of the million-dollar club, was the head of Morgan Guaranty Trust Co.'s mergers and acquisitions department in 1989. He earned more than former Morgan chairman Lewis Preston and the current chairman, Dennis Weatherstone.

Big Paychecks Despite Losses

The top executives of First Interstate Bancorp and Manufacturers Hanover Corp. violated the golden rule of business compensation in 1989: they accepted higher pay in a year when their companies reported losses.

First Interstate chairman Joseph Pinola, who plans to retire in June, saw his cash compensation jump 12.4% to $1.06 million, according to the company's proxy statement. First Interstate lost $124.5 million last year.

John F. McGillicuddy, Manufacturers Hanover's chairman, enjoyed a more modest 2.1% increase, earning $1.68 million in a year when his bank reported a $518 million loss. Mr. McGillicuddy received no bonus in 1987 when Hanover made a large addition to reserves against Third World loan losses.

A spokesman for First Interstate would not comment on the boost or on speculation that Mr. Pinola's raise was the executive equivalent of a gold watch for years of service.

"Compensation of executives is determined by the board," said the spokesman.

A spokesman at Manufacturers Hanover would not comment.

Last year, the earnings of many money-center banks were hurt by the the special provisions taken against loans to Third World countries. Five of these banks posted sizable loses, while the earnings of most of the others fell sharply. In general, executive pay at money-center banks reflected this poor performance.

The number of money-center bankers in the million-dollar club fell to 21 last year from 25 in 1988, with eight dropping out of the club and four entering. Of the eight dropouts, three retired. For the 17 money-center executives in the club both years, 12 had declines in their cash pay, and only five registered gains.

The biggest losers last year, if people with million-dollar salaries can be characterized as such, were Willard C. Butcher and Walter V. Shipley.

Mr. Butcher, chairman and chief executive of Chase Manhattan Corp., took a 19.2% hit, as his salary fell from $1.45 million in 1988 to $1.17 million in 1989. Chase lost $665 million last year.

Mr. Shipley, chairman of Chemical Banking Corp., suffered a 19% drop in 1989 compensation, to $1.19 million from $1.38 million in the previous year. The bank lost $482.2 million in 1989.

Two Morgan bankers also had pay cuts. Mr. Preston, who was the highest-paid banker in 1988, earning $1.8 million, had a 8.3% decline in his cash compensation to $1.65 million. He is now the fourth-highest-paid banker. Mr. Weatherstone's cash compensation fell 3.3% to $1.45 million last year, and he fell four notches in the rankings to 10th position.

Executive pay at money-center banks reflected last year's poor earnings.

Good Year for Regionals

The superregional and large regional banks – with some noteworthy exceptions – performed well last year, enabling their executives to enter the million-dollar club. Of the top 25 banks in net income, 22 were superregional and regional banks. The number of superregional bank executives paid $1 million or more jumped to 18 from seven, and for the first time three regional executives joined the club.

The highest-paid bank executive from a superregional bank was the 67-year-old chairman of BankAmerica Corp., A.W. Clausen. Mr. Clausen earned $1.74 million last year, up 15.8% from 1988, to rank as the nation's second-highest-paid banker. Last year, BankAmerica's earnings soared 50% to $820 million, making it the top earner in banking.

The largest gain in pay among the superregional executives was posted by Robert R. Ferguson, the 65-year-old chairman of First Fidelity Bancorp who retired last February. His pay rose 55.6% to $ 1.23 million last year. More than 46% of Mr. Ferguson's pay consisted of bonus, profit sharing, and incentive pay.

Other Survey Findings

- The growth in million-dollar earners has been dramatic. Just eight years ago, Walter B. Wriston, chairman of Citicorp, became the first bank executive to break the million-dollar barrier, earning $1.16 million in 1982. In 1985, membership tripled to include Mr. Preston of Morgan, Mr. Butcher of Chase, and Alfred Brittain 3d of Bankers Trust. In 1986, club membership again tripled to nine money-center executives.

In 1987, the year marked with many large losses stemming from the hefty additions to LDC reserves, club membership rose to 11, including for the first time three executives from supperregional banks. For the third time in four years, membership in the club more than tripled to 35 members in 1988. Last year, another bad earnings year for banks, membership rose 20% to 42.

- Among the 21 money-center executives in the club, six were from Morgan, five from Bankers Trust, and three from Manufacturers Hanover. Included in the Manufacturers Hanover count is Thomas S. Johnson, who was elected president of the bank on Dec. 19.
- Among the 18 superregional executives in the club, three are from Security Pacific, and two each are from BankAmerica, Wells Fargo, and Norwest Corp.

The salary survey is based on the proxy statements of the nation's 50 largest banking companies.

The proxy review tallied salary, bonuses, profit sharing, and other incentive payments. Excluded were stock options, restricted stock, stock appreciation rights, and pension plan payments or accruals.

Proxies only identify the five highest-paid officers. Since the top five officers at J.P. Morgan and Bankers Trust all earned more than $1 million, it is possible that some of their executives are omitted from the list. ☐

Remuneration includes total dollar amount of salary, bonus or incentive payments, profit sharing, and all other remuneration (such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive), whether current or deferred, attributable to services rendered in 1989 and 1988, respectively. Percent changes are for remuneration from 1987 to 1988 and from 1988 to 1989.

[1] Became vice chairman of the company and of Morgan Guaranty Trust Co. on Jan. 1, 1990. Previously, he was managing director of the bank from Feb. 1989 and executive vice president.

[2] Includes dividends on stock received under long-term incentive plan.

[3] Was chairman of the board during 1989.

[4] Includes remuneration received under long-term incentive plan.

[5] Became chairman on Jan. 1, 1990.

[6] Became vice chairman on Jan. 1, 1990. Previously, he was treasurer.

[7] Retired July 1, 1989.

[8] Appointed president of the corporation and Bank America NT&SA on Feb. 5, 1990.

[9] Does not include bonus for 1988 but includes bonus for 1987 that was paid in 1988.

[10] Retired in Feb. 1990.

[11] Also received cash and common stock under long-term incentive plan: $58,391 in 1989 and $326,991 in 1988.

[12] Became president of the company and of Morgan Guaranty Trust Co. on Jan. 1, 1990. Previously, he was managing director of the bank from Feb. 1989 and executive vice president.

[13] Retired on Dec. 31, 1989.

[14] Elected president on Dec. 19, 1989. Remuneration for 1989 consists of $484,917 received as president Chemical Banking Corp.; a $500,000 payment in connection with the commencement of his employment at Manufacturers Hanover; and an estimated $25,000 in salary for the last two weeks of 1989 based on his base annual salary of $650,000 per year.

[15] Title in 1988 was executive vice president.

[16] Title in 1988.

Keating Case A Surprise Test Of U.S. Powers

By ROBERT TRIGAUX

WASHINGTON — A few months ago, virtually no one gave Charles H. Keating Jr. a chance of winning a suit seeking the return of his seized thrift, Lincoln Saving and Loan Association. But now that Mr. Keating is having his day in court, some observers are beginning to hedge their bets.

Mr. Keating was to conclude his testimony today in hearings that legal experts say are proving to be a surprising test of federal regulators' power.

"Typically, cases like this never get this far," said one thrift lawyer, who noted that courts tend to defer to federal agencies in matters of bank and thrift supervision.

ANALYSIS: *Follow-up on the news*

Lincoln was taken over by the government almost a year ago, and thrift regulators have said it will cost the government $2 billion or more to cover its losses. In litigation that has cast the controversial Mr. Keating into the national spotlight, Lincoln and its parent, American Continental Corp., have sued the government to reverse the takeover.

To be sure, most lawyers still expect the government to prevail and retain control of Lincoln Savings. But, said one lawyer, "I am less certain today than two months ago."

Mr. Keating's spirited attack on the government has far exceeded the expectations of the legal community. In testimony last week, for example, his questions about how regulators wrote down Lincoln assets seemed to put the government on the defensive. Federal District Judge Stanley Sporkin asked the defense to supply information on how Lincoln's assets were valued.

Conservatorship Deemed Key

"If I were FDIC general counsel, I'd be worried," said one former government attorney who asked not to be identified. "There's so much going on with respect to Keating. Maybe the regulators will be in fine shape, but if the activities of Lincoln's conservatorship are called into question – wow!"

Indeed, some attorneys point to the recent success of Olympic Federal Savings and Loan, Berwyn, Ill., in at least temporarily halting the Office of Thrift Supervision from seizing it. That decision was later overturned, but thrift lawyers say it shows that federal agencies are not all-powerful in the court system.

Deposits Rose Less than 5% At Credit Unions Last Year

By BILL ATKINSON

WASHINGTON — In the legislative battle to rein in credit unions, bankers have lost some of their fuel. They can no longer complain of skyrocketing deposit growth at their tax-exempt rivals.

Data from the National Credit Union Administration show that deposits rose 4.7% in 1989 at the federally-insured institutions it regulates. That is the lowest percentage gain in eight years and is in stark contrast to increases exceeding 20% in 1985 and 1986.

Growth in Line with Banks'

The growth at credit unions was slightly ahead of the 4% deposit increase at commercial banks last year, but commercial banks' aggregate $2.5 trillion in deposits dwarfed the $167 billion in credit unions.

Meanwhile, bankers are blasting credit unions, charging them with unfair competition. In a national lobbying effort, the American Bankers Association has accused credit unions of stretching the definition of common bonds – the membership definition that historically limited their customer bases – and has called for an end to their tax-exempt status.

Industry followers contend that the credit union slowdown is a result of several economic and competitive factors – and perhaps some jawboning by the National Credit Union Administration to deflect criticism from bankers. While the regulatory agency has emphasized capital ahead of growth, credit union interest rates have fallen more in line with those of financial institutions, and competition is intense for a limited pool of consumer savings.

"I don't think we will see growth like [the mid-1980s] for years," said John T. Roycroft, vice president of Callahan and

Chase Profit Drops 67%; Real Estate Is Pothole

By JED HOROWITZ

NEW YORK — A higher-than-expected increase in bad real estate loans battered Chase Manhattan Corp.'s profits in the first quarter, while Manufacturers Hanover Corp. and J.P. Morgan & Co. reported a decline in core earnings more in line with investors' expectations.

Stocks of the three bank companies were down at the close on Monday, while major market indexes edged up. Chase slipped $1.50, to $27.875; Morgan eased 12.5 cents, to $35.375; and Manufacturers Hanover fell 25 cents, to $34.25.

Chase said its net income in the quarter fell 67% to $44 million, largely because of a 73% increase in its loan-loss provision and a $272 million increase in nonperforming real estate loans. Several analysts said they might reduce their yearly estimates for the nation's second-largest bank company because of the extensive real estate problems.

Manufacturers Hanover said its net income fell 7% to $96 million, but analysts applauded the

Bank of NY Deal Becomes Dispute Over Stock Value

By GORDON MATTHEWS

NEW YORK — The proposed friendly acquisition of Northeast Bancorp. by Bank of New York Co. turned nasty Monday as a $377 million dispute over the value of the deal became public.

The dispute came to the forefront as Bank of New York prepared to file an application with the Federal Reserve Board for the purchase of the Stamford, Conn., bank.

At issue is a wide disagreement over the book value of Northeast's shares, in light of the deterioration of Connecticut real estate values.

In a statement late Monday, reported by Reuters, Northeast management said it could not understand how Bank of New York determined a book value of $12.31 for each Northeast share as of Dec. 31. Northeast put its yearend book value at $33 a share.

Bank of New York had agreed to a purchase price of 2.5 times

Citicorp Refines Its Consumer Network

Citicorp Is Beginning to Define Limits of Its Domestic Expansion

By ELLEN MEMMELAAR

NEW YORK — Citicorp, the company that many smaller banks have come to fear the most for its ability to enter new markets seemingly at will, is becoming selective about where it will go.

In recent weeks, Citicorp has agreed to sell branches in upstate New York and Utah to banks more active in those areas. Analysts expect more branch sales as Citicorp tries both to bolster its capital and focus on regions and businesses that it deems integral to its strategic plan.

The moves do not signal a full-scale retreat from retail markets by the nation's largest banking company. Citicorp boasted in its recent annual report that it provides at least one service to one in four American households. Much of that reach comes from the company's vast credit card operation, which has issued

COMMENT/*By Sanford Rose*

How to Calculate Investment Returns

How should a banker determine where to invest his institution's funds? Although many bankers are familiar with the methodology for comparing investment opportunities, a significant number are not. And this lack of familiarity often results in suboptimal financial choices.

Quite obviously, it makes little sense to choose among competing assets by looking only at their gross yields. These yields must be adjusted for the cost of match-funding the investments plus likely credit losses, noninterest expenses, and options risk – e.g., the risk that a borrower will prepay his loan.

Additionally, to figure out his bottom-line profit, the banker must divide his returns by an amount of allocated capital sufficient to cover unexpected losses. Since the amount of unexpected losses depends crucially on the extent of portfolio diversification, the banker cannot view each investment opportunity in isolation.

He must assess how the marginal investment meshes with his existing portfolio. For example, will a new loan improve portfolio diversification because the fortunes of the new customer tend to vary inversely with those of existing customers? Or will it increase concentration risk because a given economic shock is likely to have much the same impact on the new customer as on the old ones?

Diversification analysis is complicated. So for the sake of simplicity, let us assume that each of three investment opportunities – a conventional whole mortgage loan, a consumer loan, and a junk bond – have the same diversification impact on the banking company's portfolio. Given this assumption, Michael Giarla, a partner at Smith Breeden Associates, an investment counseling firm based in North Carolina, offers the following analysis of the returns promised by each of these investment choices.

Costing the Rate Risk

The gross yields on the three assets are assumed to be as follows: the mortgage, 11%; the consumer loan, 12%; and the junk bond, 14.5%. The bank's short-term funding cost equals 8%. But since each asset has a different average life, the banker must fund at a different maturity in order to neutralize interest rate risk. The extra costs of match-funding the assets – that is, the premiums over the short-term rate which must be paid to get longer-dated funds – are assumed to be 1% for the mortgage (although, in actual practice, this figure is probably considerably understated), 0.50% for the consumer loan, and 0.75% for the junk bond.

Next the banker must adjust the yields for average credit losses – say, 0.50% for the mortgage, 1.50% for the consumer loan, and 4% for the junk bond. Options, or prepayment, risk necessitates the following further subtractions: 0.60% for the mortgage, 0.40% for the junk bond, and only 0.10% for the consumer loan.

Tallying these deductions, the banker notes that the consumer loan appears to afford the highest margin – 1.80% versus 1.35% for the junk bond, which is clobbered by the high credit-risk deduction, and only 0.90% for the mortgage, which has the lowest gross yield and also the most options risk.

Capital earns its share of the assets – plus the leverage spread.

But, of course, the banker can't stop here. He has to make a final deduction for noninterest expenses. These are assumed to vary from 0.25% for the mortgage, to 0.50% for the junk bond, to 1.50% for the consumer loan.

Hence, we arrive at a net "expected" spread of 0.30% for the consumer loan, 0.65% for the mortgage, and 0.85% for the junk bond. The emphasis is on the word "expected" because the banker could have been incorrect in many of his assumptions. For example, as noted, the mortgage may, and very probably does, have a much higher match-funding cost than is being estimated here.

Calculating the Bottom Line

Nevertheless, having made his best guesses, the banker is now prepared to divide the expected net spreads by the amount of allocated capital. According to regulatory requirements, the banking institution needs only 4% capital to backstop the mortgage, but 8% for both the consumer loan and the junk bond.

If, after analyzing the likely variance of losses on each asset, the banker is satisfied that he needs no more than the minimum capital required by the regulators in each asset category, he can proceed to determine his bottom-line profit or return on allocated capital.

This calculation, however, is a bit trickier than most people think. The banker's capital earns its share of the assets plus the leverage spread – i.e., the spread between the remaining assets and liabilities.

So for every $100 invested in mortgages, the rate earned on the $4 in required capital equals 8.65% – the full 11% gross yield minus the allowances for credit, interest rate, and options risk and for noninterest expenses. And the rate earned on the remaining $96 of invested assets equals 0.65% – the gross yield minus all the various adjustments and the 8% short-term funding cost.

Lowest Yield, Highest Profit

This produces a pretax return of 24.3% on the mortgage. And the same calculation shows an 11.9% return on the consumer loan and an 18.6% return on the junk bond.

So, despite the fact that the mortgage has the lowest gross yield, it results in the highest bottom-line profit. A decision based on yield alone would have produced an incorrect choice (the junk bond), as would a decision based solely on risk-adjusted margin (the consumer loan).

To be sure, if the difference between long and short rates is such that the cost of adjusting the mortgage for interest rate risk is not 1% but closer to 1.8%, the picture changes radically. The net mortgage spread equals minus 0.15% and the return on equity is a minuscule 4.3%.

The point is that the banker must make sure that his assumptions are unbiased and reasonably accurate. Only then can he hope to arrive at the optimal choice of assets, provided he incorporates all the elements required for the analysis – yield; cost of funds; adjustments for interest rate, credit, and options risk; noninterest expenses; and capital allocation. ☐

CRIME BLOTTER/*By Tom Leander*

Three Convicted In Montana Fraud

Real Bird, the tribal chairman of the Crow Indians of Montana, was convicted last week of two counts of bank fraud and one count of conspiracy in connection with a loan scam involving officials from the Crow reservation near Billings.

Also convicted in U.S. District Court were Willie Stewart Jr., who is chairman of the Crow Land Resources Committee, and Theodore Hogan, former tribal secretary.

The defendants were accused of misleading First Citizens Bank of Billings and the Billings Credit Union into approving loans by assuring loan officers that the tribe was in the process of buying $296,500 of Mr. Hogan's land, even though they knew the land had already been foreclosed on by Little Horn State Bank, Hardin, Mont.

U.S. Attorney Carl Rostad said the defendants had pocketed more than $50,000 as a result of the scheme. The convictions are expected to be appealed.

Sentencing was scheduled for July 17. The three each face up to 12 years in prison.

Oregon Robberies Down 46% in 1989

Oregon banks, which experienced the highest rate of bank robberies in the nation in 1988, got a breather last year. The number of bank robbers fell 46% to 187, down from 346 in 1988, according to the Federal Bureau of Investigation.

The FBI in Portland attributed the drop to a crackdown on crime.

* * *

Decision Is Made In Polygraph Case

A bank executive and the bank's in-house counsel at Minnesota Savings Bank, Minneapolis, will not have to pay punitive damages for ordering an employee to take a polygraph test. The court determined they did not know of a state ban.

The law bans the solicitation of a polygraph test by an employer and creates a private cause of action if a boss imposes such a test. But the court found that the punitive damages can be awarded only if the officers had shown a "willful indifference" to the Minnesota law and also found that the bank executive and attorney showed "good faith but mistaken belief."

The court, however, upheld punitive damages against the bank security officer, who had knowledge of the law but administered the tests anyway.

Two Men Accused As Taxi-Using Robbers

Two Chicago men who allegedly robbed banks using a waiting taxi as a getaway car were arrested in Chicago recently, after FBI agents traced the men to a motel by using cab company records.

Charles Tinsley, 33, and Andrew Traeger, 37, are suspects in the robberies of Heritage Bank of Oak Lawn on March 24; LaSalle National Bank, Chicago, on March 19; and North Community Bank, Chicago, on March 16.

In each robbery, witnesses told police, one robber would remain in the cab while another entered the bank and handed the tellers a threatening note. No weapons were used.

FBI spokesman Robert Long said that Mr. Tinsley and Mr. Traeger are suspected of mailing back half the $6,600 allegedly stolen from Heritage Bank. Investigators were trying to learn the motive for the payback.

* * *

License Number Aids In Suspect's Capture

Michael Kriteman was clad in a towel and on his way to the shower to wash off the red dye from an exploding packet of loot when, police said, they rang his doorbell and nabbed him for robbing Rockland Trust Co. in Brockland, Mass., an hour before.

Mr. Kriteman, 30, a suspect in seven other bank robberies in the area, allegedly entered the Rockland branch and handed over a note to the teller that read "Give me money. I have a gun." The teller handed over an undisclosed sum of money that hid a packet of exploding red dye.

A witness copied down the license plate number. ☐

Dispute Brews Over Book Value Of Northeast

Continued from *page* **1**

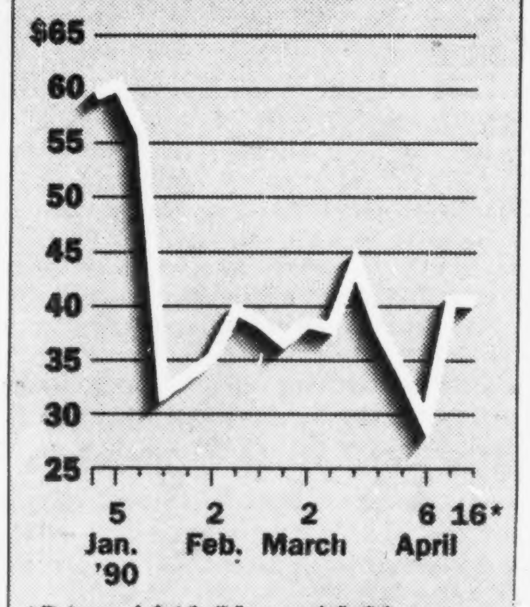
Northeast's book value. In effect, Northeast calculates the value at about $602 million, while Bank of New York puts it at about $225 million.

Shares of Northeast Bank never opened for trading on Monday.

The stock skyrocketed $11.25 to $40.50 in two days last week after Bank of New York chairman J. Carter Bacot said a filing was imminent. The stock traded as high as $61 in January, before Mr. Bacot made pessimistic remarks about the merger.

Northeast Bancorp's Rugged Ride

Price per common share



*Price of $40.50 as of 3:30 pm

Source: DB Technology Inc.

Separately, Northeast reported a loss of $6.5 million for the first quarter, versus a profit of $8.7 million a year ago.

The bank added $27.5 million to its reserve for loan losses and charged off $28.5 million of bad loans in the quarter. Reserves fell to $49.6 million at the end of the quarter from $50.1 million at yearend.

Setting the stage for a potential legal donnybrook, Northeast said it was prepared to enforce its merger pact with Bank of New York, according to the terms of its agreement as well as on the basis of the book value approved by its auditors.

This dispute marks the latest chapter in the saga of what is often regarded as one of the nation's landmark, if incomplete, bank acquisitions. The deal has been pending since 1983.

Landmark Deal

Bank of New York's plan to acquire Northeast prompted the U.S. Supreme Court to decide in 1985 that states did not violate the Constitution by forming exclusive regional compacts to prevent entry by banks from large states like New York.

The high court ruling ushered in the era of interstate banking, but put the Bank of New York-Northeast deal on hold. In the meantime, the stakeout arrangement has supported the stock of Northeast, which is based in Stamford, Conn., and is the parent of Union Trust Co.

With a recession in New England, the Connecticut legislature this year dispensed with the New England compact and opened the state to all entrants on a reciprocal basis. That finally placed the Bank of New York deal in the realm of possibility.

But that was after Northeast had reported weakened fourth-quarter earnings that caused its stock to plunge. Investors grew worried that Bank of New York would balk at completing the deal because of the collapse of New England's real estate market and sharply higher nonperforming loans at Northeast.

Observers believe this is the last point at which Bank of New York could file the application and expect to get a regulatory decision in time to meet the Aug. 15 expiration date on the merger agreement.

Yesterday's Market

Last week's bank stock rally did not survive the long Easter holiday. The stock market was broadly higher on Monday, but big bank stocks mostly edged lower as cautious investors attempted to digest a flood of bank earnings announcements.

Several analysts said the market for bank stocks seemed to be hurt by reactions to a trio of earnings announcements from New York money-centers, and by a wait-and-see attitude about the earnings and dividend of Citicorp, which is expected to report results today.

In late afternoon trading, Chase Manhattan Corp. slipped 37 cents to $29, J.P. Morgan & Co. eased 12 cents to $35.37, and Manufacturers Hanover Corp. fell 25 cents to $34.25. At the same time, Citicorp eroded 12 cents to $24.75.

"The Chase earnings report was very disappointing, and Morgan was not exciting," noted Richard X. Bove, an analyst for Dean Witter Reynolds Inc. "Manufacturers did better than expected, but the stock was down anyway." □

CAPITAL

LDC Reserve Picture Rosier, Study Shows

By KELLEY HOLLAND

There's a bright spot on the horizon for banks' loan-loss reserves, according to a report released by Keefe, Bruyette & Woods Inc.

Because much of the Mexican debt exposure of American banks has been restructured into more secure bonds collateralized by Treasury securities, many of the banks could begin to show a better reserve ratio against their loans to lesser-developed countries.

That's good news for banks that have been struggling to boost loan-loss reserves. The Keefe study indicates that major banks' reserves against medium- and long-term loans to Third World countries could increase to about 65%, up from 51%.

A Scorecard on Mexican Debt Plan

	Principal reduction bond	Interest reduction bond	New money
Bank of New York Co.	100%	0%	0%
BankAmerica Corp.	0	60	40
Bankers Trust New York Corp.	25	75	0
Chase Manhattan Corp.	30	70	0
Chemical Banking Corp.	30	70	0
Citicorp	0	0	100
Continental Bank Corp.	0	100	0
First Chicago Corp.	0	100	0
Manufacturers Hanover Corp.	50	50	0
J.P. Morgan & Co.	50	50	0

Source: Keefe, Bruyette, & Woods Inc.

"An important element of the LDC picture has been dealt with through the Mexican debt restructuring, " said James J. McDermott, director of research at Keefe Bruyette. "It should promote a decrease in LDC fears."

Banks were offered three options in the debt restructuring agreement with Mexico. They could exchange their loans for new bonds collateralized by Treasury bonds with a lower principal amount but the same coupon as the rate on the loans. They could exchange their loans for bonds with the same principal amount but a lower interest rate, or they could lend new money to Mexico equal to 25% of their loans.

Several Options Exercised

Banks could choose any of the options for part or all of their term loan portfolio. Their selections ran the gamut, with Citicorp only lending new money against its portfolio and Bank of New York planning to exchange all its loans for the principal-reduction bonds.

Calculating LDC loan exposure as if they had written down their principal-reduction bonds and excluded their Mexican loans from their LDC loan exposure as of the end of 1989, money-center banks' reserves rose to 65% of their LDC loan exposure from 51%, at the end of 1989.

First-quarter earnings announcements now coming out will give industry observers their first peek at how banks intend to account for their newly restructured Mexican loans. The Mexican debt swap idea was advanced in the fall of last year, and banks signed off on the plan during the first quarter.

Key Accounting Issues

Key questions are whether the banks will write down the loans they exchanged for principal or interest-reduction bonds, and whether they will classify any or all of their restructured loans as nonperforming assets.

Banks' accounting treatment of their new Mexican bonds varies widely, and makes it harder for investors to compare different banks' performance.

"There's enormous head-scratching going on," said one analyst.

Take J.P. Morgan, for example. That bank took a first-quarter charge of $232 million because the bank wrote down both its interest-reduction bonds and its principal-reduction bonds. In contrast, Manufacturers Hanover Corp. reported a 35% write-down only on the $639 million it restructured as principal-reduction bonds. The banks' principal-reduction bonds were issued at 65% of the face value of the loans exchanged.

Banks vary as well on whether they will classify their restructured Mexican loans as nonperforming assets. □

Frozen Accounts May Spur Suits Against Banks

By ROBERT M. GARSSON

WASHINGTON — Banking experts warned Wednesday that 173 financial institutions covered by a court order freezing accounts linked to the alleged laundering of drug money face potential legal problems from both their customers and the government.

"Banks are being placed between two warring parties," said Karen Shaw, executive vice president of the Institute for Strategy Development.

ANALYSIS: *Follow-up on the news*

Although amendments to financial privacy law have provided good-faith exemptions for institutions that cooperate with the government, "banks still face considerable liability," Ms. Shaw said.

For example, if a court order contains an incorrect account number and a financial institution freezes money of a customer not under investigation, the institution could face a lawsuit, Ms. Shaw said.

Enmeshing Investigations

The larger risk is of being tangled in an investigation of money laundering.

So far, law enforcement officials have not suggested that any of the 173 banks knew the accounts may have been used illegally. But officials may conclude that some of the institutions should have known they were dealing with drug dealers or drug money.

In that case, the institutions may be required to prove that they took every reasonable step to ensure that the accounts represented legitimate businesses or individuals.

'Know Your Customer'

"There are requirements to know your customer, and there is a concept known as 'willful blindness,' which means you knew something was amiss but didn't follow up," said John Byrne, a lawyer who specializes in money-laundering issues for the American Bankers Association.

At a minimum, any bank investigated in connection with the accounts frozen Tuesday is likely to spend millions of dollars assembling a defense.

"They are going to run up some serious dollars" in expenses, said Ms. Shaw. "The legal departments don't know about every account, so they are going to have to go back and document how the account was handled, whether CTRs were filed and so forth." CTRs, or

Most Big U.S. Banks Already Meet Capital Levels of the Basel Accord

By KELLEY HOLLAND

NEW YORK — The overwhelming majority of America's largest banks already meet the tough international capital standards that take effect in 1992, an *American Banker* survey found.

As of yearend 1989, at least 89 of the nation's top 100 bank holding companies reported that they had total capital in excess of the regulatory minimum of 8% of risk-adjusted assets that will be enforced beginning in 1992.

The same number of banking companies said that their Tier 1 capital, which consists mostly of equity, was above the 4% minimum agreed to by international regulators in the Basel accord of 1987.

Leading America's banks in both categories was Republic New York Corp., which had total capital of 21.15% and Tier 1 capital of 12.45%. All together, 42 banks had total capital in excess of 10% of risk-weighted assets, and nine had Tier 1 capital above that level. (See tables starting on page 18.)

At the bottom of the banks reporting was Bank of New England Corp., which reported a total capital ratio of 3.45%. The bank's capital ratio suffered when its real estate portfolio led

Curb on Unit Is New Blow To Bank of New England

By TOM LEANDER

In yet another setback to the recovery of Bank of New England Corp., federal regulators have imposed strict controls on the bank company's Connecticut unit because of "unsafe and unsound" real estate lending practices.

Similar cease-and-desist orders also are expected to be imposed on the bank company's Maine and Rhode Island subsidiaries in the next two or three weeks, Bank of New England said.

Analysts also said that the controls signaled further problems for the New England economy. Hartford-based Connecticut Bank and Trust Co. was widely considered Bank of New England's healthy unit.

Trend Is Foreseen

"It tells me that real estate problems in Connecticut are trailing Massachusetts by six to nine months," said James E. Moynihan, an analyst for Advest in Boston.

Bank of New England's stock was trading Tuesday afternoon

Chemical Seeks Bids on Units Managing Assets

By JED HOROWITZ

NEW YORK — Like several money-center banks that have thrown in the towel on managing investments for pension funds, Chemical Banking Corp. said Wednesday that it is exploring the sale of its institutional asset-management businesses in the United States and Britain.

Chemical said the units on the block have about $5 billion of assets under management. A Chemical spokeswoman would not say how much the bank hopes to get for the companies. She said the units were profitable last year, but she did disclose their revenues.

Several Shed Units

Several money-center banks have shed pension-fund management units in recent years. Generally, large banks have not had the reputation of producing the greatest investment returns for clients in a business that has a number of smaller, more flexible independent investment

Retailers' Exodus from Credit Cards Could Bring Banks to Promised Land

By ELLEN MEMMELAAR

NEW YORK — After years of waiting for retailers to drop out of the credit card business, bankers may finally be getting their wish.

With costs rising and market share declining for nonbank issuers, industry sources say it is only a matter of time before they turn many of those operations over to banks.

Department stores, oil companies, and other merchants hold the biggest portion of revolving consumer loans not on banks' books – about one-fourth of the $177 billion in revolving credit that had not been securitized at the end of 1989.

While giant retail card issuers like Sears, Roebuck and Co. are unlikely to pull out of the business, banks' share of that market could rise substantially above their 67% at the end of 1989.

Profiting from the Retreat

Among those poised to take advantage of any exodus are Citicorp, the biggest banking provider of private-label card services to retailers, and GE Capital Corp., the General Electric Co. subsidiary that issues credit cards through a finance company and a bank it owns in Ohio.

Card industry observers point out that the trend is already well established. Banks have gained about four percentage points of the revolving-credit market share at retailers' expense since 1986.

The possibility of letting

COMMENT/*By William M. Isaac*

S&L Fiasco Points Up Folly Of Tampering with Markets

The thrift crisis, culminating in the collapse of the Federal Savings and Loan Insurance Corp., has produced the most expensive bailout in U.S. history. The total cost, most of which will be borne by the taxpayers, is now estimated to be at least $325 billion.

There is an overriding lesson to be learned from this disgraceful episode in American finance: Government policies designed to impede the operation of markets, no matter how well intended, are doomed to fail.

Markets are like great oceans – powerful, unpredictable, and relentless. They eventually overcome any attempts to restrain them.

S&Ls Sprang Up to Meet Need

Thrifts were created in the 19th century in response to a market need. Banks were not satisfying the desire of consumers for a safe haven for their savings dollars and for a vehicle to finance their most basic and expensive need: housing. Thrifts were formed, initially as philanthropic organizations, to fill the void.

Across the span of a century, market conditions changed dramatically. Not only banks, but many other financial intermediaries, recognized the opportunities for profit in serving consumers and developed the products to do so.

In the meantime, the government intervened with a series of measures designed to limit competition. Interest rate controls were put in place to restrict price competition. A rate differential was established to encourage the flow of funds to thrifts. A deposit insurance system was created to maintain stability and to preserve a diverse (and uneconomic) banking structure.

Thrifts Restrained

Laws were passed mandating that thrifts continue to function as nondiversified lenders. Branching restrictions severely curtailed geographic expansion and diversification. And other fences were erected to keep various types of financial intermediaries on their own distinct playing fields.

These attempts to curb the markets appeared to work for a time. They restrained the tides of change. But in the end, they could not prevent nature from taking its course. Inevitably, the pressures built to a level where the ocean of the market exploded through the barriers, devastating everything in its path.

The government made some feeble attempts to respond to these inexorable forces, but its efforts proved too little, too late, at best – and wrongheaded, at worst.

When it became clear by the late 1970s that banks and thrifts were fragile rafts in a sea of change, and were about to be engulfed in the stormy tide of rising and volatile market interest rates, the government abruptly removed rate controls.

Irreversible Damage

But by then, irreparable damage had already been done. Thrifts had amassed huge portfolios of long-term fixed-rate assets on the assumption that liability costs would always be controlled.

Overhead costs had risen to uneconomic levels as banks and thrifts invested heavily in staffs and brick and mortar to enable them to engage in nonprice competition.

Money market funds, commercial paper, and other devices had been developed by nonregulated competitors to bypass increasingly inefficient regulated entities.

Removal of interest rate controls was indeed too little, too late. But that was not the worst of it.

Overzealous Deregulation

Congress and the Reagan administration were repeatedly cautioned by experts that deregulation of interest rates unaccompanied by other substantial changes in the regulatory environment would be a prescription for disaster.

Specifically, they were warned that examination and supervision of depository institutions would need to be strengthened and the deposit insurance system would have to be reformed to ensure that the funds flowed to the stronger, more conservatively managed institutions instead of the highfliers willing to pay the highest rates.

The government not only ignored these warnings, but pursued diametrically opposed policies. The deposit insurance limit was raised from $40,000 to $100,000. The Treasury opposed and congressional hear-

ABA's Byrne Joins Advisory Task Force On Money Laundering

The banking industry will gain a voice in shaping federal money-laundering policies through this week's appointment of lobbyist **John J. Byrne** to a new task force that will advise drug czar **William Bennett** and, more broadly, his **Office of National Drug Control Policy.**

Mr. Byrne, senior federal legislative counsel for the **American Bankers Association,** says the **Drug-Related Financial Crimes Policy Group** aims to balance the needs of bankers as businessmen with the needs of government officials as law enforcers.

The task force may provide a means for bankers to derail burdensome money-laundering regulations – that sound good in theory but impose heavy compliance costs – *before* they get a public airing.

John J. Bryne

Mr. Bryne describes the panel as a "first-tier group to give feedback on notions, ideas, or concepts that may evolve over time into regulations." He adds: "I hope to bring a moderating influence to this group and to use it as a forum."

Officials from the Treasury, Justice, and State departments as well as the intelligence agencies are also being named to the task force. Academia, state and local governments will be represented as well. The group will meet every other month in Washington.

Mr. Byrne says he wants to use his presence on the panel to bolster the Financial Crimes Enforcement Network, a centralized data base; advise members of Congress about currency-reporting rules; and educate the banking industry on regulatory rules and the uses of the financial-crimes data base.

Magazine Poll Rates Clout on Capitol Hill

An April 16 *Business Week* diatribe on Congress includes lists of the most and least effective lobbies on Capital Hill.

The banking lobby made both lists.

"We were pleased to be at the top of the most-effective list," said **Edward Yingling,** ABA's executive director for government relations. "Obviously being on the worst list, too, was a bit ironic."

The magazine polled 304 of the Hill's top staffers to see which industries packed the most powerful punch. The "Industries with Clout" list was led by banking, which received 18% of the total votes. On the "... And Industries Without" list, banking was tied for sixth behind the likes of oil companies and utilities.

"You have to take these polls with a grain of salt," Mr. Yingling admitted. "They are not exactly scientific."

Bank Trade Groups Prepare for Summit

Leaders of the six bank-related trade associations will convene here May 7 for a "summit" meeting.

The top three or four elected officers as well as the top staff person at each association will huddle to hammer out common positions on gnawing issues such as deposit insurance reform, ways to restructure the banking industry, and the decline of the thrift industry.

The trade groups sending representatives are the **American Bankers Association,** the **Independent Bankers Association of America,** the **Consumer Bankers Association,** the **Association of Reserve City Bankers,** and the **Association of Bank Holding Companies.**

These so-called summit meetings have been held about twice a year for the past five years. The last confab was about a year ago, to discuss the thrift-bailout legislation, which was then in its infancy. These summits occasionally lead to lobbying breakthroughs, such as in 1986 when the trade groups built a broad coalition for repeal of the Glass-Steagall Act.

Donald W. Riegle, D-Mich., chairman of the **Senate Banking Committee,** has asked the trade groups for their thoughts on legislation to restructure financial-services regulation.

Banking Issues Fill Agenda of Realtors

The **National Association of Realtors** has come a long way since negotiating with the **American Bankers Association** two years ago about extending real estate powers to banks. Those talks broke off.

Now, the influential trade association is firmly set against allowing banks entry to the real estate business, says **Stephen D. Driesler,** chief lobbyist for the Realtors.

The bankers and Realtors may not be talking anymore, but when 7,000 NAR members hit town Friday for the trade group's midyear conference, banking issues will crowd the agenda.

Among the bank-related issues to be discussed are the Merchants National case, loans-to-one-borrower limits, and proposals to permit first-time homebuyers to draw funds from tax-deferred individual retirement accounts for down payments.

Stephen D. Driesler

"It seems like next year is shaping up as a critical year," Mr. Driesler said. Lawmakers, he said, "don't want to do anything on [expanded bank] powers without deposit insurance reform." Come January, Treasury is due to report back to Congress on a massive study of the deposit insurance system.

Table described: American Banker asked the top 100 U.S. bank holding companies (based on assets on Dec. 31, 1989) to report their yearend capital based on the new risked-based capital guidelines that go into effect at yearend 1992. American Banker also asked the banks to calculate the new risked based capital ratios— the Tier 1 and Total (Tier 1 + Tier 2) ratios, based on the final 1992 guidelines, whenever possible. Also shown is primary capital and the primary capital ratio as calculated by the banks for regulatory purposes. **The new guidelines:** On January 19, 1989, the Federal Reserve Board issued final guidelines to implement risk-based capital requirements for state member banks and bank holding companies. The guidelines are based on the framework adopted in July 1988 by the Basle Committee on Banking Regulations and Supervisory Practices, which includes the supervisory authorities of 12 major industrial countries. These guidelines redefine capital as "Tier 1" (core) and "Tier 2" (supplemental) capital; establish minimum interim requirements that must be reached by yearend 1990; and more stringent final requirements that must be reached by yearend 1992. **Tier 1 capital:** for bank holding companies, Tier 1 capital consists of: common stockholders' equity; qualifying noncumulative perpetual preferred stock; and minority interest in the equity accounts of consolidated subsidiaries minus goodwill; minus 50% of investments in certain subsidiaries (banking and finance subsidiaries that are not consolidated for accounting or supervisory purposes and, on a case by case basis, investments in other designated subsidiaries or associated companies at the Fed's discretion) and minus 50% of the reciprocal holdings of the capital instruments of other banking companies. **Goodwill:** With respect to goodwill, goodwill recorded prior to March 12, 1988 is grandfathered until 1992. After 1992, all godwill will be subtracted out. **Tier 2 capital:** consists of qualifying loan and lease loss reserves, perpetual preferred stock, mandatory convertible notes, perpetual debt, and subordinated term debt minus 50% investment in certain subsidiaries and minus 50% of the reciprocal holdings of the capital instruments of other banking companies. **Limits:** perpetual preferred stock included in Tier 1 capital is limited to 25% of the sum of all core capital elements. Also, for the purposes of calculating the total capital requirements, the amount of Tier 2 capital used in the computation cannot exceed the amount of Tier 1 capital. In addition, during the transition period, the guidelines reduce the amount of the allowance that may be included in total capital. **Interim guidelines:** By yearend 1990, the amount of the allowance qualifying as capital will be limited to 1.5% of an institutions weighted risk assets. By yearend 1992, the amount of the allowance qualifying for inclusion in Tier 2 capital cannot exceed 1.25% of weighted risk assets. In addition, combined subordinated debt and term preferred stock included in Tier 2 capital may not exceed 50% of Tier 1 capital. Under the 1990 guidelines, supplemental capital comprised of Tier 2 elements can be included in Tier 1 capital up to 10% of the sum of Tier 1 capital pluss goodwill. **The target ratios:** The Federal Reserve Board has established the following targets: **by yearend 1990,** the ratios of Tier 1 and total capital to weighted risk assets should be **3.625%** and **7.25%,** respectively. **By yearend 1992,** the ratios of Tier 1 and total capital to weighted risk assets should be **4.00%** and **8.00%,** respectively. **Primary capital** is the sum of total shareholders' equity, mandatory convertible debt, allowance for possible loan and lease losses, and minority interest in equity accounts of consolidated subsidiaries. **The primary capital ratio** is the regulatory ratio compiled by the banks. It is calculated by dividing primary capital by the sum of total assets and the allowance for possible loan and lease losses. **(a)**— On Jan. 29 First Union Corp. acquired Florida National Banks of Florida. **(b)**— On Jan. 18, MNC acquired Equitable Bancorp. **(c)**— On Jan. 2, Society Corp. acquired Trustcorp. **(d)**— On March 5, CoreStates acquired First Pennsylvania Corp. **(★)**— Data provided by SNL Securities are as of Sept. 30, 1989. **(1)**— Based on 1990 transitional rules. **(2)**— Ratios computed using the final 1992 rules. **(3)**— Estimated. **(4)**— Data provided by the Hoboken, N.J. office of **SNL Securities**, Charlottesville, Va. **N.A.**— Not available.

Most Big U.S. Banks Already Comply with International Rules for 1992

Continued from *page* **1**

to massive writeoffs.

Most of the data for these findings – which mark the first time American banks have been ranked according to 1992 Tier 1 and total capital standards – came from a special *American Banker* survey of the top 100 banking companies in assets on Dec. 31, 1989. For banks not responding to this survey, data from SNL Securities Inc. were used.

(Of the top 100 banking companies as of yearend 1989, three lost their independence through mergers, and five declined to provide data. Those five were: Valley National Corp., Bank of Boston Corp., Fifth Third Bancorp European American Bancorp, and First Alabama Bancshares Inc.)

The growing capital strength of the industry came as no surprise to James J. McDermott, director of research at Keefe, Bruyette & Woods Inc.

Foreign banks have more hidden reserves.

"The regulatory attempt is to set a standard that's achievable by industry," he said.

Banks worked hard over the last year to boost their capital ratios, issuing new equity late last year and selling off assets.

"They've been working both the numerator and the denominator of the ratio to get to higher levels," Mr. McDermott said. Added Arthur P. Soter, a managing director at Morgan Stanley & Co.: "For most banks, the new capital requirements are a nonevent, particularly for the regionals. Their problem is too much capital, not too little. We have overcapacity in the banking industry."

Still, some American banks that already meet international standards may find it harder to comply with separate U.S. capital regulations, soon to be put in place, according to William Taylor, director of bank supervision at the Federal Reserve Board.

'Leverage Ratio' Up in the Air

Bank regulators are still arguing about the final level of equity capital that will be required under the so-called leverage ratio. But by the end of this year, banks will have to hold at least 3% equity capital to total assets.

Because the leverage ratio measures capital to total assets, not to risk-adjusted assets, it may result in higher capital requirements for some banks. That is because under risk-based capital rules, a bank that held only U.S. government securities, weighted zero risk by the rules, would not have to hold any capital. But under leverage ratio standards, it would have to maintain equity capital of 3%.

"For the bank with a very low risk portfolio, the 3% could bite harder than the 4% [Tier 1]," Mr. Taylor said.

Proposed to the leading industrial countries in 1987, the international capital requirements were designed to set worldwide standards to ensure bank safety and soundness.

By 1992, banks must calculate their capital adequacy by weighting assets according to their riskiness and deducting any loan-loss reserves in excess of 1.25% of total risk-adjusted assets.

Banks must maintain Tier 1 capital, mostly common equity and noncumulative perpetual preferred stock, equal to 4% of their risk-adjusted assets. They are also required to maintain total capital equal to 8% of risk-adjusted assets.

Besides Tier 1 capital, total capital includes subordinated debt, auction and term preferred stock, perpetual debt, mandatory convertible debt, and loan-loss reserves up to 1.25% of risk-adjusted assets. These are called Tier 2 capital.

The survey of the top 100 banking companies showed that regional and superregional banks reported higher capital ratios, on average, than did money-center banks, which have been plagued over the years with the need to boost reserves against loans to lesser-developed countries.

After Republic New York Corp., Manufacturers Hanover Corp. was the next strongest money-center, with a 10.24% total capital ratio, followed by J.P. Morgan at 10.10%. Manufacturers Hanover ranked 37th in total capital, and Morgan came in 40th.

Last year, money-centers in particular strove to build up their capital bases after sharply increasing LDC loan-loss reserves, tapping the equity markets in a big way in the autumn.

But this year, with concerns over financing for real estate and highly leveraged transactions unsettling the financial markets, banks have had a much more difficult time raising debt or equity. Of the major banks, only First Interstate Bancorp raised a notable amount of equity in the first quarter.

On the surface, the largest U.S. banks appear better capitalized today than many of their overseas counterparts. For example, Japanese banks reported an equity-to-assets ratio, roughly equivalent to Tier 1 capital, of 2.59% at the end of September 1989.

But appearances can be deceiving, according to Stuart H. Windt, a senior managing director at Marine Midland Banks.

Japanese banks have hidden reserves in the form of securities portfolios that have risen sharply in value in recent years. Even if those portfolios had dropped 45% by the time the Japanese banks reported their interim earnings in September 1989, their equity-to-asset ratios would have averaged 6.05%, according to Thomas E. Gove, a vice president at Thomson BankWatch.

You can still find it at Balboa Life and Casualty.

By applying strict performance standards, we demand more of ourselves than our customers do.

Every one of over 160,000 claims we receive annually is put in process within one day. As a result, 95% of our life and disability claims are turned around within five days. And over 80% of our collateral protection claims are settled within ten days of receipt. It's response time like this that makes you more effective and keeps your customers satisfied.

At Balboa Life and Casualty, we approach business with the values of the past. We find the future looks better that way.

For more information, call David de Gorter, Marketing Director at 714-553-7692.

Table described: American Banker asked the top 100 U.S. bank holding companies (based on assets on Dec. 31, 1989) to report their yearend capital based on the new risked-based capital guidelines that go into effect at yearend 1992. American Banker also asked the banks to calculate the new risked based capital ratios— the Tier 1 and Total (Tier 1 + Tier 2) ratios, based on the final 1992 guidelines, whenever possible. Also shown is primary capital and the primary capital ratio as calculated by the banks for regulatory purposes. **The new guidelines:** On January 19, 1989, the Federal Reserve Board issued final guidelines to implement risk-based capital requirements for state member banks and bank holding companies. The guidelines are based on the framework adopted in July 1988 by the Basle Committee on Banking Regulations and Supervisory Practices, which includes the supervisory authorities of 12 major industrial countries. These guidelines redefine capital as "Tier 1" (core) and "Tier 2" (supplemental) capital; establish minimum interim requirements that must be reached by yearend 1990; and more stringent final requirements that must be reached by yearend 1992. **Tier 1 capital:** for bank holding companies, Tier 1 capital consists of: common stockholders' equity; qualifying noncumulative perpetual preferred stock; and minority interest in the equity accounts of consolidated subsidiaries minus goodwill; minus 50% of investments in certain subsidiaries (banking and finance subsidiaries that are not consolidated for accounting or supervisory purposes and, on a case by case basis, investments in other designated subsidiaries or associated companies at the Fed's discretion) and minus 50% of the reciprocal holdings of the capital instruments of other banking companies. **Goodwill:** With respect to goodwill, goodwill recorded prior to March 12, 1988 is grandfathered until 1992. After 1992, all godwill will be subtracted out. **Tier 2 capital:** consists of qualifying loan and lease loss reserves, perpetual preferred stock, mandatory convertible notes, perpetual debt, and subordinated term debt minus 50% investment in certain subsidiaries and minus 50% of the reciprocal holdings of the capital instruments of other banking companies. **Limits:** perpetual preferred stock included in Tier 1 capital is limited to 25% of the sum of all core capital elements. Also, for the purposes of calculating the total capital requirements, the amount of Tier 2 capital used in the computation cannot exceed the amount of Tier 1 capital. In addition, during the transition period, the guidelines reduce the amount of the allowance that may be included in total capital. **Interim guidelines:** By yearend 1990, the amount of the allowance qualifying as capital will be limited to 1.5% of an institutions weighted risk assets. By yearend 1992, the amount of the allowance qualifying for inclusion in Tier 2 capital cannot exceed 1.25% of weighted risk assets. In addition, combined subordinated debt and term preferred stock included in Tier 2 capital may not exceed 50% of Tier 1 capital. Under the 1990 guidelines, supplemental capital comprised of Tier 2 elements can be included in Tier 1 capital up to 10% of the sum of Tier 1 capital pluss goodwill. **The target ratios:** The Federal Reserve Board has established the following targets: **by yearend 1990,** the ratios of Tier 1 and total capital to weighted risk assets should be **3.625%** and **7.25%,** respectively. **By yearend 1992,** the ratios of Tier 1 and total capital to weighted risk assets should be **4.00%** and **8.00%,** respectively. **Primary capital** is the sum of total shareholders' equity, mandatory convertible debt, allowance for possible loan and lease losses, and minority interest in equity accounts of consolidated subsidiaries. **The primary capital ratio** is the regulatory ratio compiled by the banks. It is calculated by dividing primary capital by the sum of total assets and the allowance for possible loan and lease losses. **(a)**— On Jan. 29 First Union Corp. acquired Florida National Banks of Florida. **(b)**— On Jan. 18, MNC acquired Equitable Bancorp. **(c)**— On Jan. 2, Society Corp. acquired Trustcorp. **(d)**— On March 5, CoreStates acquired First Pennsylvania Corp. (1)— Based on 1990 transitional rules. (2)— Ratios computed using the final 1992 rules. (3)— Estimated. (4)— Data provided by the Hoboken, N.J. office of **SNL Securities**, Charlottesville, Va. (5)— Data are as of Sept. 30, 1989. (6)— Pro forma. Includes Florida National Banks Inc. which was acquired on Jan. 29. **N.A.**— Not available.

SEC Regulation On Debt Trading Hailed by Banks

By WILLIAM GOODWIN

Officials at the American Bankers Association were breathing a little easier Friday after learning that a new SEC restriction on private placement activity apparently is not as onerous as they first believed.

ABA officials left an Securities and Exchange Commission meeting Thursday thinking that the SEC had just imposed a blanket prohibition against commercial banks trading private-placement securities for their fiduciary accounts.

Under the SEC's just-adopted rule 144A, banks would be able to trade private-placement securities only for their own account, the ABA concluded at Thursday's meeting. That impression was based on oral comments made at the meeting.

ANALYSIS: *Follow-up on the news*

But an SEC staffer told ABA officials Friday that the restriction is not as bad as it sounded.

Banks would be barred from trading on behalf of their personal trust accounts, but not for qualified pension fund and charity accounts. ABA officials said they were told.

ABA Encouraged

While still awaiting official word about the extent of the restriction, ABA officials were heartened by the staffer's comments.

"It definitely would ease our concerns somewhat," if the staffers report is correct, said James McLaughlin, director of agency relations at the ABA.

The SEC originally said it hoped to release the rule in written form on Friday, but later said the rule would not be publicly released until today.

Meanwhile, the top SEC staffers working on the rule could not be reached Friday for a definitive clarification.

Despite Friday's confusion, bankers and their lobbyists applauded adoption of 144A.

Wider Trading Opportunities

In general, the new rule will free up trading in the private-placement market by allowing the purchase and immediate resale of unregistered securities to qualified institutional investors – those who own at least $100 million of securities.

Commercial bankers expect the issuance of new private placements to move ahead even faster than the already blistering pace of recent years. Last year, banks and investment bankers helped corporations raise more

Review of Citicorp Debt Signals Moody's Focus on Money-Centers

By KELLEY HOLLAND

NEW YORK — The decision of Moody's Investors Service to place Citicorp's debt securities under review signals a change in focus for the increasingly aggressive rating agency.

Since the beginning of the year, Moody's has downgraded 43 banks and thrifts, but all the banks involved were regionals. Now money-centers may find themselves under the same tough scrutiny.

"We started out by looking at the banks with rapidly deteriorating asset quality, where nonperformers were rising very rapidly," said Christopher T. Mahoney, associate director at Moody's.

"Now we're taking a look at institutions that have large exposures where the deterioration hasn't really started yet." He said that this would mean a shift in emphasis for money-center banks.

In its statement Thursday, Moody's highlighted Citicorp's exposure to lesser-developed

Bank Stocks Off Sharply As Worries Proliferate

By GORDON MATTHEWS

NEW YORK — Major bank stocks were hammered hard on Friday as new worries about rising interest rates were added to nagging fears about high-leverage loans, depressed earnings, and reductions in debt ratings.

"It looks like we are making a run down the whole worry list today," said James J. McDermott Jr., executive vice president and research director of Keefe, Bruyette & Woods Inc.

Interest-rate concerns also helped drag down the broader stock market, which had one of its most volatile days of the year. Hit early and often, bank stocks ended the week near their levels of two weeks earlier – prior to their best performance of the year.

Analysts said Friday was the bloodiest day for the bank group since April 5 and 6, when a panic selloff followed a meeting between bank analysts and officials from the Office of the

Seidman Urges RTC to Scrap Asset Appraisal

By BARBARA A. REHM

WASHINGTON — In a move that real estate experts said would greatly speed the sale of seized thrift assets, the Resolution Trust Corp. is expected to start using competitive bids instead of appraisals to determine the sale price of property, according to L. William Seidman, the agency's chairman.

Asset values are now determined by an appraisal process, which has proved cumbersome and sometimes fruitless. High prices set by appraisers have contributed to the RTC's troubles in selling assets from seized thrifts.

"We are looking at how to establish market value without appraisals," Mr. Seidman said in an interview last week. "If you advertise broadly and you have 50 bidders and three of them are within 5% of each other, then that is the market price."

The RTC's four-member board will consider the proposal at a meeting Tuesday. Mr. Seidman's support is expected to assure approval.

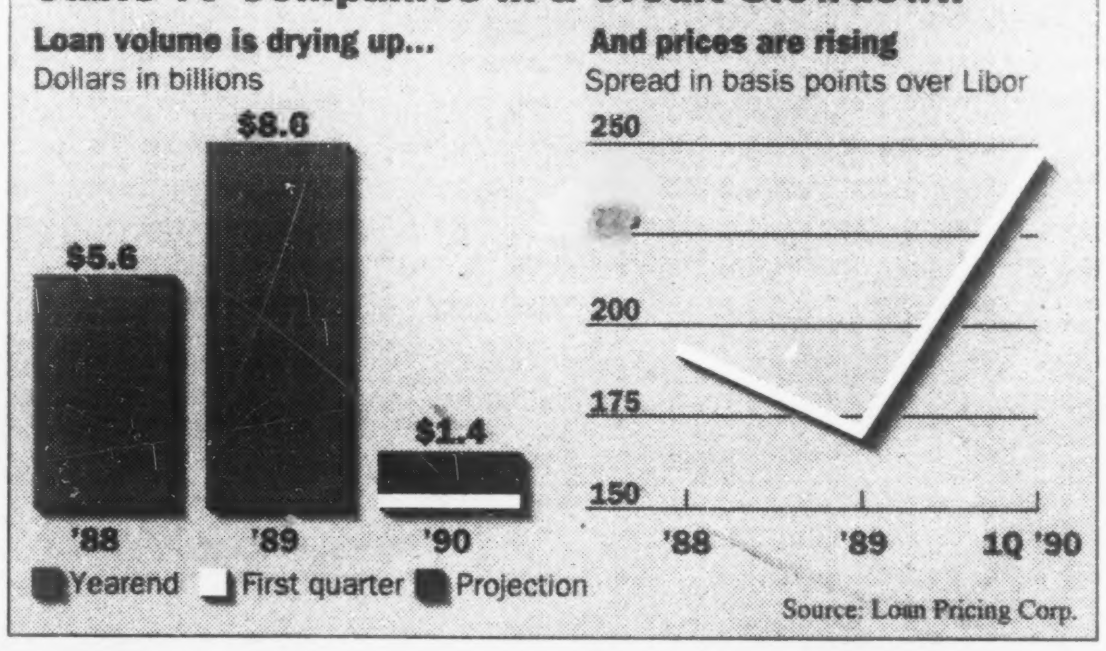
Cable TV Companies in a Credit Slowdown



Source: Loan Pricing Corp.

Regulators' Leverage Guidelines Blur Credit Picture for Cable TV

By CURTIS SIMMONS

NEW YORK — Aided by the seemingly bottomless pockets of their bankers, cable television companies expanded rapidly in the 1980's, fighting for valued franchises and eventually devouring one another in a great wave of consolidation.

But now, according to bankers and industry experts, credit for cable TV companies is drying up fast. The reason: new regulatory guidelines for bank loans to leveraged companies, announced in February.

These standards, combined with turmoil in the junk bond market following the demise of Drexel Burnham Lambert Inc., have cast a pall on the market for highly leveraged transactions. And perhaps no other industry has been as severely affected as cable TV.

"Banks are feeling the effects of HLTs and the feds hunkering down on them," said William Schink, vice president for media and communications lending at General Electric Capital Corp. "They are becoming more conservative."

"It is tougher to get deals done during this uncertainty," said

PEOPLE *in the news*

James Large Has Anchor Back on Hopeful Course

By PHIL ROOSEVELT

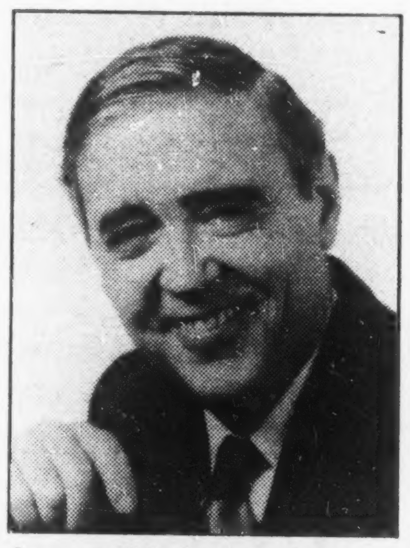
When James M. Large Jr. arrived at the troubled Anchor Savings Bank last year, rivals and analysts were quick with the quips: Mr. Large faces a big job; Anchor is sinking; glub, glub, glub.

The jokes may soon subside. Last week, after 12 months as chairman and chief executive of the Hewlett, N.Y.-based thrift, the veteran of First Interstate Bancorp reported that his turnaround effort was well on the way to success. In the latest sign of hope, the Office of Thrift Supervision approved Anchor's plan for meeting capital standards within two years.

The action by the OTS markedly reduces the chances that regulators will seize the $9 billion asset-thrift, one of the largest on the East Coast. Thus, the action has given new life to Mr. Large's vision of a completely revived Anchor.

"We've demonstrated by what we've accomplished so far that we have the right to continue," he said in an interview. "Now we have to take it the rest of the way."

Indeed, Anchor still has major problems. It has posted losses in each of the past five quarters, and it has negative tangible capital of about $200 million. To meet the capital requirements of the 1989 bailout law, Anchor needs about $330,000.



James M. Large Jr.

The thrift has been hobbled by large amounts of nonearning goodwill, low yields on assets, and high overhead costs. Analysts place much of the blame on a seemingly random acquisition spree launched in the early 1980s under Mr. Large's predecessor, Donald L. Thomas.

Mr. Large, 57, joined Anchor last April after earning turnaround stripes as an executive vice president at First Interstate. He helped revive 15 of the company's small banks. Previously, he led a turnaround at First National Bank of Allentown, Pa.

"Banking is my hobby," says Large, who acknowledges that he's a workaholic.

At Anchor, Mr. Large has already taken dramatic action, slashing the thrift's head count 35% to 2,058. And it looks like he has only started.

Branch Sales Part of Plan

Under his capital plan, Anchor will raise money partly by selling as many as 58 of its 120 branches, including $2 billion of deposits. The targeted branches are in the Southeast, rather than Anchor's core market in metropolitan New York. Anchor will also sell some mortgages and other assets and seek to convert cumulative preferred stock into instruments that count as capital.

The planned branch closures required a huge goodwill writedown for the quarter ending March 31. As a result, Anchor posted a loss of $169 million for the period. Excluding one-time charges and gains, the thrift lost about $3 million, down from $7 million in the previous quarter and $12 million in the quarter before that.

The thrift will return to the black in "a reasonable period of time," Mr. Large said.

"The basic franchise is really alive and well," he said. "Our market share is growing, our deposits are growing, and we've opened more checking accounts in the last month than we did in the last 12 months." □

Highly Leveraged Loans Reduced At Wells Fargo, President Says

Reuters

LOS ANGELES — Wells Fargo & Co., which earlier reported a 19% increase in earnings per share for the first quarter, is passing up some business in highly leveraged transactions because the deals do not meet its standards, president Paul Hazen said.

"Our [highly leveraged] outstandings are trending downward in the first quarter and the reason is that we saw few deals that met our standards," he told the annual meeting last week.

He noted that at the end of 1989, the company's outstanding highly leveraged loans stood at $4.2 billion under a new definition laid down by U.S. regulators.

Mr. Hazen said that Wells' experience with HLTs had been relatively favorable because of the in-house standards such transactions must meet before Wells joins a deal.

"From 1983 to 1988, we did not have any losses under the old definition and in 1989 we had only one for $30 million," he said.

Because of its HLT portfolio, Wells' stock has been vulnerable to jitters in U.S. financial markets and the problems that have arisen in the high-yielding junk bond market.

Wells' large commercial real estate portfolio also has made it vulnerable to stock market concern that the problems in real estate markets in the Northeast will spread to California, which so far has been immune. □

Liquidity Crisis Had Hit Lincoln, Regulator Says

By LISA A. HAMMOND
Special to the American Banker

WASHINGTON — A federal regulator testified on Friday that Lincoln Savings and Loan Association was in a liquidity crisis when the government seized it last spring.

The testimony came on the final day of the government's defense of the seizure of the Irvine, Calif., institution, whose liquidation could cost taxpayers $2 billion or more.

Charles H. Keating Jr., chairman of Lincoln's parent, American Continental Corp., Phoenix, claims federal regulators improperly devalued Lincoln's assets to justify seizing the thrift.

The preliminary hearing on Mr. Keating's suit to regain control of the California thrift lasted 27 days.

Examination Called Standard

Keith Seibold, the western regional director for the Federal Deposit Insurance Corp. who supervised the Lincoln takeover, said in the preliminary hearing Friday that the asset values were changed after standard FDIC examinations of the thrift.

Mr. Seibold testified that Lincoln's state at the time of its seizure was "one of the most chaotic situations I've seen in my 20 years at the FDIC."

"Lincoln had a severe liquidity crisis when we walked in," he said.

Final arguments are scheduled for June 8. Federal District Judge Stanley Sporkin can dismiss the case, issue a summary judgment, or order a trial.

John E. Lundin, Mr. Keating's lawyer, predicted that the case would go to trial.

But lawyers for the government disagreed. "I think this is the trial, although the judge hasn't told us what he is going to do," said government attorney Paul E. Gutermann.

Ms. Hammond writes for the Medill News Service.

First Chicago Net Off 45%; Chief Says No Data Leaked

By NANINE ALEXANDER

CHICAGO — First Chicago Corp. chairman Barry F. Sullivan denied on Friday that the bank company gave analysts detailed information about its problem loans while briefing them in advance of releasing first-quarter earnings.

The bank company reportedon Friday that first-quarter profits plunged 45% to $68.6 million because of problems with real estate loans. The decline was expected, since First Chicago announced three weeks ago that first-quarter profits would probably be cut in half because of an increase in the loan-loss provision to cover badreal estate loans.

Speculation centered on troubled VMS Realty Partners. In a published report, James J. McDermott Jr. of Keefe, Bruyette & Woods Inc. was quoted as having been told by First Chicago that it had about $200 million of loans outstanding to VMS. The bank and Mr. McDermott denied the story.

At a news conference on Friday Mr. Sullivan again denied the allegations, which reportedly sparked an inquiry by the Securities and Exchange Commission. Of the investigation, Mr. Sullivan said, "We haven't heard anything from the SEC."

First Chicago's provision for loan losses in the first quarter grew more than threefold to $160 million from $50 million in the year earlier quarter. Nonperforming loans grew 32.6% to 1.05 billion from $792 million last year.

Real Estate Woes May Persist

Although Mr. Sullivan said he expected that the loss provision would return to normal levels in the next quarter, he did not rule out more difficulties in real estate. He said there are a few loans that are being closely scrutinized.

Analysts said the numbers were in line with expectations.

Christoph A. Kotowski, an analyst at Oppenheimer & Co., said the amount of nonperforming loans was at the low end of his expectations. He also thought First Chicago's 112% ratio of reserves to nonperforming loans was a positive sign.

Mr. Kotowski said he thought net interest margin of 2.89% was weak. In the year earlier quarter it was 3.37%. Net interest income declined to $327 million from $332.2 million a year ago. □

Correction

A ranking of bank holding companies based on risk-based capital ratios was published April 19 (page 24). City National Corp., Beverly Hills, Calif., said ratios that it had supplied were understated.

At yearend 1989, the bank's actual Tier 1 and total capital ratios were 8.52% and 9.61%, respectively, ranking City National 27th in Tier 1 and 53d in total capital among the top 100 banking companies.

COMMENT/*By Paul Nadler*

Image of Bankers Out of Step With Changes in the Industry

One of banking's major concerns today is image. How can we differentiate our ethical operations from the scandalous operations of some thrifts and Wall Street firms when the public thinks that every financial institution is a "bank"?

How can we get the public to know the difference between a thrift that has recently been allowed to take the name "bank" and a full-service bank that has been in the business for years?

How can we get people to accept the fact that, even though a bank joins a superregional or statewide organization, it is still the local bank doing its job on the same old corner?

The Latest Challenge

These image challenges are well known. But there is another that may be equally important: Demonstrating to college graduates just entering the work force what a bank truly is and does, and dispelling the outdated, stereotyped image.

There is a sharp distinction between a banker's image and what a banker actually does.

Most college students still think of a banker as someone who knows how to dress properly, choose the right food and wine, mingle with the right people, and occasionally sign these people up for deposit or borrowing services. The expression "bankers' hours" remains a part of our vocabulary, no matter how long bankers work in 1990.

I wrote a column over a decade ago to emphasize that the exciting new frontier of banking had become the operations area. At that time, the students only wanted so-called fast-track training programs for lending officers.

'Anyone Can Put on a Vest'

I received a call from Walter Wriston's office asking me to spend a morning discussing this issue with the policy committee of Citibank, where he was then CEO. I'll never forget Mr. Wriston's comment to me: "Anyone can put on a vest and lend to Corning Glass. It's the guy who breaks up the knife fights in the computer room that keeps this bank going."

There is still an opportunity to get the cream of today's crop of students to understand what is involved in banking and how exciting it can be.

But while bankers have had an image problem with students for decades, where the difference between image and reality comes to the fore in 1990 is in the wooing of bright people to bank examination service.

When students come to me looking for entry-level jobs in banking, I remind them that banks are laying off thousands of people rather than hiring. Banks that do need people have a pool of trained personnel who were unfortunate enough to have been with the wrong bank but who are now available for new challenges.

'The expression "bankers' hours" remains a part of our vocabulary, no matter how long bankers work in 1990.'

Rare indeed will be the college graduate who is given an opportunity to be hired and trained by a bank in 1990 – an era of the worst bank results in half a century.

Demand for Examiners

But good young people are needed desperately in bank examination. If we have learned anything from the thrift industry fiasco, it is that we need far more and far better trained supervisors and examiners.

Yet again, look at the image of bank examiners. The examiner is still thought of a the young CPA who "counts the cash" and makes sure all the paper is in the vault and all the documentation is correct.

How different this is from the real role of bank examiners today in determining whether banks are safe, whether they are meeting their capital requirements, and whether they are reserving adequately against loan losses. In fact, the examiner may have too much say, rather than too little, in the running of most banks today.

Best, Brightest Not Wooed

Yet what efforts have the examination staffs of the federal and state regulatory agencies made to get this information across to students and thereby to woo the "best and the brightest" into bank examination?

Professors of banking get few calls from examiners wanting to interview their students. But the need for good students is so great that when I sent a bright young woman to a regional office of the Comptroller of the Currency, the regional comptroller not only wrote to thank me but asked if I had more students like her.

Banks and bank examiners thus face a challenge to change their image. Their effort will have a major impact on the industry long after today's thrift bailout and bank loss problems are solved. For if our best students do not know what bank work can accomplish, the industry will not be able to keep up with the changes in this ever more complex economic environment. □

Mr. Nadler is professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

More than 40 bankers in the United States were paid better than $1 million each in salary and other compensation in 1989, an *American Banker* review of proxy statements found. While the pay of some money-center bank executives was cut somewhat, sharp pay increases were given executives at superregional and regional banks. Some chief executives received raises despite their banks' poor results. Jeffrey Marshall of *American Banker* asked the following people for their views.

Q ***Are top bankers being paid too much, and should pay be tied more closely to performance?***

■ Emanuel N. Monogenis
Partner
Heidrick and Struggles Inc.

I think the question should be: What are they paid in comparison to whom? In comparison to a rock star or an athlete? With a rock star, you know how much has been generated because the person filled Madison Square Garden.

Those bank presidents who produce more should be paid more. If they produce $600 million in profit, what's wrong with paying them $2 [million] or $3 million? If it's clear to directors that an individual is producing a certain level of profit, I don't have a problem calling whatever pay that person gets justified. The cynicism revolves around people who aren't performing . . . .

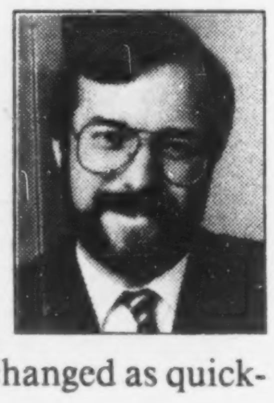
If there is accountability following performance, then people won't mind [what top executives are paid].

■ Dan Williams
Banking industry analyst
Sutro & Co.

I would think the time is not too far off when corporations in general would be well-advised to do something that really does tie the compensation of senior executives of a company to performance. And I mean a program which doesn't just stair-step up [the compensation].

One of the problems is that, in the last few years, executive compensation may or may not have been exorbitantly high, but when it is high, it never comes down. If the company has a couple of lousy years, the directors never find a way to bring it down. It never gets adjusted. In our business, if production goes down, compensation goes down.

■ Steven E. Hall
Managing director
Pearl Meyer & Partners Inc.



Generally, what we're seeing with banking is an industry in a state of transition. It's no longer what it used to be years and years ago. And while the business has changed, we're finding that the compensation delivery systems in place for those top people has not changed as quickly . . . .

The important thing to focus on is the mix of salary that you pay someone that is short-term versus long-term and incentive. That's the place where banks are starting to make their strides. It's creating a proper balance between a guaranteed amount in terms of salary and what is more at risk in terms of performance. Some of our clients have really done a lot in the past few years, to [put] 40% to 50% of someone's total pay at risk. It's being very responsive.

One thing that creates a problem for banks is the whole LDC issue . . . . It looks like a lot of bankers did take an LDC hit [to their pay]; I think that is not always the most equitable thing to do. They got caught up in someone else's mistakes.

A lot of these bankers aren't exactly sleepily taking in deposits and doling out loans. Now, they're in businesses where there's a lot of risk and opportunities to make a lot of money.

■ Margaret-Ann Cole
Manager, benefits and compensation
Deloitte & Touche

A million dollars isn't what it used to be. If you figure that a regular middle-management person is making $60,000 or $70,000, in a number of years, with good raises of 10% or so, that person may be making a quarter of a million.

I think we're moving much closer to a [pay-for-] performance path, particularly with the job market being so tight. It's very performance-driven, much more so than in past years. In the early '80s, pay was out of control. Companies would pay a lot to get these hotshots on board and then find that maybe they weren't worth so much.

I really feel that the tight job market is filtering into these industries . . . . A lot are offering lower base salaries and bigger bonuses. I really think that's the wave of the future. □

Economist To Begin 2d Stint Atop Argentine Central Bank

Reuters

BUENOS AIRES — Orthodox economist Javier Gonzalez Fraga will return to head Argentina's Central Bank this month, a senior bank official said.

It has not yet been decided whether Mr. Gonzalez will be named president or whether he will have a new title after the Central Bank is restructured, said the bank official, who asked not to be named.

Mr. Gonzalez Fraga was President Carlos Menem's first Central Bank president. He resigned in November after his differences with former Economy Minister Nestor Rapanelli became public and affected Argentina's sensitive financial markets.

The Peronist administration plans to split the Central Bank into at least three bodies, the official told Reuters. One branch will be responsible only for monetary policy; a second will supervise the banking system, and the third will handle foreign trade.

Mr. Gonzalez Fraga was a consultant to foreign and local banks before becoming Central Bank president. In his 20-week tenure, its foreign reserves rose to $2 billion from almost nil when he took over from a Radical Party predecessor amid hyperinflation.

A supporter of a free-floating exchange rate, Mr. Gonzalez Fraga clashed last year with Mr. Rapanelli, who intended to keep the currency's parity fixed at 652.5 australs per U.S. dollar until 1991.

Mr. Rapanelli quit in December after the austral crashed past 1,500 per dollar in the black market and hyperinflation resumed. The austral, floated in January, now stands at 4,905 to the dollar.

... by country

SPAIN

Gonzalo de Las Heras, managing director in charge of **Morgan Guaranty Trust** Co.'s Latin American division, is leaving to join Spain's **Banco Santander**.

Mr. De Las Heras will join Banco Santander's senior management as adviser on international strategy to the bank's chairman, Emilio Botin.

The 50-year-old, Spanish-born banker joined Morgan in 1978 in Madrid, where he headed the U.S. bank's representative office. He subsequently was instrumental in building up Morgan's debt trading and corporate finance activities in Latin America.

— **James Kraus**

CZECHOSLOVAKIA

The International Monetary Fund has readmitted Czechoslovakia, state-run television quoted Finance Minister Vaclav Klaus as saying.

Mr. Klaus told reporters he had just returned from a meeting in Spain where Czechoslavakia's readmission to the fund was confirmed. The nation formally applied for IMF membership in January, and Mr. Klaus has said he expected admission to be granted at the IMF's annual meeting in September.

Czechoslavakia would join the so-called Belgian group in the IMF, with countries such as Belgium, Hungary, Turkey, and Luxembourg of equal status.

— **Reuters**

PHILIPPINES

The government is drafting a program to trim its consolidated public sector deficit and keep closer to a level agreed on with the International Monetary Fund, Central Bank Governor Jose Cuisia said.

Failure to comply with IMF economic targets would delay release of the third tranche from a $1.17 billion, three-year loan facility designed to support economic growth.

The IMF wants Manila to stick to the target deficit of 33.4 billion pesos or 3% of estimated 1990 gross national product, Mr. Cuisia told reporters.

Based on current trends, the consolidated public sector deficit is ballooning to 55.2 billion pesos or 5% of GNP, officials said.

— **Reuters**

MEXICO

The World Bank said it approved a $450 million loan to Mexico to help finance a project to expand electrical transmission and distribution systems and to renovate thermal plants.

The loan is part of a $7.1 billion, 10-year project to improve Mexico's electrical systems. The Inter-American Development Bank and bilateral agencies are expected to cofinance the project, the World Bank said.

The loan is for 17 years at a variable interest rate, currently 7.75%, linked to the World Bank's cost of borrowing.

— **Reuters**

AUSTRALIA

Australia and New Zealand Banking Group and **National Australia Bank** announced cuts in their 18.75% prime reference lending rates, effective today.

ANZ Group managing director Reg Nicolson said his institution's cut, to 18.5%, reflected the falling cost of deposits. "If the cost of these deposits continues to fall, this will translate into further cuts in the ANZ reference rate," he said.

National Australia cut its benchmark rate to 18.25%.

— **Reuters**

JAPAN

The Finance Ministry said it is considering making it easier for foreign banks to open branches in Japan, and foreign bankers said the move is expected mainly to benefit **Citicorp**'s Citibank unit.

— **Reuters**

Bankers Warming to Brazil Talks

Odds Seen Improving for Some Payment this Year

By JAMES R. KRAUS

NEW YORK — Brazil's willingness to open debt-reduction talks is increasing the chances that its creditor banks may recover some of the money they are owed this year, bankers predicted.

"The discussions we have had privately so far lead us to believe they want a constructive solution," said a banker in New York. "The odds that banks will get some interest are excellent. The odds of our being paid 100% are zero."

Brazil owes foreign commercial banks about $65 billion out of a total foreign debt of $115 billion, more than the $48.5 billion Mexico owed foreign banks before its debt restructuring. The Brazilian debt includes $16.3 billion owed to U.S. banks, with Citicorp the single largest creditor.

Arrears Top $5 Billion

Brazil stopped making interest payments in June and its interest arrears exceed $5 billion. The missed payments were partly responsible for the reduced profits reported by several major U.S. banks for the first quarter.

Brazil paid Citicorp $170 million in interest last year, compared with $661 million a year earlier.

It paid Chase Manhattan Corp. $100 million, down from $365 million a year earlier; BankAmerica Corp., $105 million, down from $351 million; Manufacturers Hanover Corp., $73 million, down from $256 million; J.P. Morgan, $65 million, down from $240 million; and Chemical Banking Corp., $46 million, down from $205 million.

Loans to Brazil

As of Dec. 31, 1989

	($ mil.)
Citicorp	$3,300

Assurances Repeated

Brazilian officials have repeatedly affirmed their commitment to reaching an agreement with banks since a new government under President Fernando Collor de Mello took office in March.

Citing Economics Minister Zelia Cardoso de Mello and central bank president Ibrahim Eris, *The Wall Street Journal* last week reported that Brazilian officials hope to begin preliminary talks with banks on a debt reduction agreement at the International Monetary Fund-World Bank meeting in Washington early next month.

Payments Restricted

Brazil recently introduced a tough austerity program to put the brakes on runaway inflation but said it does not intend to make more than $5 billion in interest payments on its foreign debt.

Observers warned that negotiations between Brazil and its banks may well be as protracted as debt-reduction talks with Mexico, which took nearly a year to complete.

They predicted that banks may get only token interest payments and will probably not see the rest until after an agreement is concluded.

Pessimism Voiced

"I wouldn't be particularly hopeful about a glow of debt servicing coming," said Paul M. Sacks, president of Multinational Strategies Inc. a, New York-based international advisory firm.

A debt reduction agreement would be the fifth since Treasury Secretary Nicholas F. Brady called on banks last year to forgive a portion of their loans to heavily indebted nations.

Five deals struck so far have been with with Mexico, the Philippines, Costa Rica, Venezuela,and Morocco. □

Bundesbank Touting 2-1 Swap of Marks

By JANET GUTTSMAN
Reuters

FRANKFURT — As the debate heats up over terms of German monetary union, the Bundesbank has gone on the offensive to support its controversial proposal to swap eastern marks for western marks at a general rate of two for one.

Normally reticent central bank officials have appeared on national and regional television programs. Bundesbank board members have pleaded their case in a series of newspaper articles and interviews.

"The Bundesbank is arguing that it has been misunderstood," said Martin Wiedmann, a vice president of Citicorp's Citibank.

The West German central bank says a 2-to-1 swap rate is essential to allow East German firms to repay their massive debt and to prevent a sharp rise in monetary growth.

Exclusion for Personal Savings

The only exception to the rate would be the first 2,000 marks – about $1,200 – of personal savings, which should be swapped at par, it says.

East German leaders, including new Prime Minister Lothar de Maiziere, have turned down the idea. In a televised speech Thursday to East Germany's first freely elected parliament, Mr. de Maiziere said East Germans' dignity and property were at stake.

"We [the two Germanys] must reach an accord that will ensure East German citizens do not get the feeling they will become second-class citizens," the Christian Democratic leader said.

Bundesbank President Karl Otto Poehl said last Thursday that the Bundesbank plan had been misinterpreted. The proposals would not lead to a halving of East Germany's already low wages because wages would be raised before monetary union is set, Mr. Poehl said. □

Continued from *page* **1**

Stephen Mcdonald, managing director of cable lending at Toronto Dominion Bank. The Canadian bank is the industry's leading lender, by a wide margin.

The numbers tell the story. Through the first quarter of 1990, just three loans to cable TV companies for $345 million were publicly reported, according to Loan Pricing Corp., which tracks the market. On an annualized basis that's 12 loans totaling about $1.4 billion.

In 1989, by contrast, 34 loans for a total of about $8.8 billion were disclosed, up from 23 loans for $5.6 billion in 1988.

And the pricing on the loans has jumped, too. From an average spread of 171 basis points over the London interbank offered rate in 1989, the handful of cable loans disclosed this year carried spreads of 246 basis points above Libor.

Quantifying Risk

The new HLT guidelines were mainly an attempt by regulators to set up uniform standards to give bankers and their examiners a handle on risk. They don't mandate any changes in lending policies. They do not require banks, for example, to restrict their lending to HLTs or reserve more heavily against the possibility of problems with them.

But because leveraged loans are considered riskier, investors and Wall Street analysts view high HLT exposure with a jaundiced eye, creating indirect pressure on management to reduce or minimize exposure.

That's bad news for many cable TV industry lenders. Under the February guidelines, American banks have to classify many of their cable TV loans as highly leveraged transactions.

No one is arguing that cable loans are not leveraged. Before February, though, some banks did not classify their cable and media loans as HLTs. Their reasoning was that the cable companies, unlike some leveraged buyouts that depend on asset sales for success, tend to throw off enormous amounts of cash – more than enough to cover interest costs.

Leveraged Loans Up Sharply

Some banks made the assumption that their cable loans would be included as HLTs, but adhering to the new guidelines has forced many banks to report substantial increases in HLT exposure. Many leading cable TV lenders reported sharp increases in their HLT loans, including Bank of Boston, Mellon Bank, Continental Bank, and NCNB.

Under the new guidelines, a loan is considered highly leveraged if the company's liabilities exceed 75% of its assets. A loan is also an HLT if a buyout, acquisition, or recapitalization causes the company's debt to double and results in liabilities exceeding 50% of assets.

The guidelines, unlike those used by some banks, do not address the borrowing company's ability to generate cash. Bank of Boston, for example, used criteria in which a loan was considered an HLT if the borrower's senior debt plus 25% of its subordinated debt exceeded its cash flow by a ratio of 7-to-1.

Some banks evidently took the changing environment to heart. Citibank reduced its exposure to cable lending to $710 million at yearend from $1.1 billion in June 1989, according to data compiled by Paul Kagan Associates. Citicorp officials were not available for comment.

Foreign Lenders Benefit

Bankers said that the new rules give an advantage to foreign banks and nonbank lenders, which are unaffected by the regulations.

Such competitors already have a strong grip on the market: 10 of the top 20 lenders to the cable TV industry at yearend 1989 were either foreign banks or nonbank lenders, according to data compiled by Paul Kagan Associates.

"I think we are seeing deals more quickly, and are seeing more attractive deals,' said Mr. Shink of General Electric Capital. "Since GE is a nonbank, we can be more creative."

Foreign banks have taken advantage of the situation, too. Canadian Imperial Bank of Commerce recently purchased $1 billion in cable TV loans from the Bank of New England in February.

Telecommunications Inc., the largest U.S. cable TV company, turned late last year to a syndicate of European banks late last year for a $500 million credit.

"We aren't unhappy with our domestic banks, said Gerald S

Protect yourself against suits by borrowers.

With Lender Liability Law Report, edited by Helen Davis Chaitman.

Every year, the number of lawsuits by borrowers against lenders continues to grow. And many of those suits have led to multi-million dollar judgements *in favor of the borrower*! Now, there's an up-to-date report that can provide you with the information you need to avoid, and defend against, lawsuits brought by borrowers– **Lender Liability Law Report.**

Lender Liability Law Report is a one-of-a-kind newsletter that reports and analyzes recent cases, and offers advice and techniques for avoiding similar legal problems. **Lender Liability Law Report** also covers:

- Cases where lenders have filed counter-claim suits
- Environmental clean-up liability cases
- Consumer loans that go into default

Now more than ever, you need to know about developments in lender liability when they happen, not when it happens to you! But, **Lender Liability Law Report** can be on your desk every month, bringing you comprehensive reporting on lender liability developments ...and keeping you out of court!

With its easy-to-read format and expert editorial guidance, **Lender Liability Law Report** will become your first line of defense against unwelcome and unwarranted lawsuits. Without the information **Lender Liability Law Report** offers... without expert analysis and up-to-the-minute reports of current cases...without the latest techniques to avoid damaging lawsuits, you could be vulnerable to borrower-initiated lawsuits.

Don't leave yourself unprotected. Return the attached coupon today for your FREE trial copy of **Lender Liability Law Report.**

Banks' Growing Share of Private Placement Market

Source: Securities Data Co. Inc.

DEALS

SEC Rule on Debt Trading Hailed by Banks

Continued from *page* **1**

than $172 billion in private placements, exclusive of private certificates of deposit and deposit notes.

Even in its initial stages, "I think we're talking easily billions of dollars," said Maleyne Syracuse, vice president in charge of private placements at Bankers Trust Co., one of the most active commercial banks in the private-placement market.

"We're geared up to deal with the issues," she said.

Most 144A issues will be in the $100 million range, Ms. Syracuse predicted, adding that she expects more than 10 issues by the end of this year alone.

Foreign Issuers to Be Active

At least initially, the most active issuers in the new market spawned by the SEC rule are expected to be foreign companies and their U.S. subsidiaries.

Foreign issuers are discouraged from participating in the U.S. public debt markets because of the time and costs associated with registering their securities.

At the same time, foreign firms have not wanted to pay the premium necessary to attract investors in the private-placement market.

Investors demand the premium because of the illiquidity in the private-placement market.

With the advent of rule 144A, the premium issuers pay on their cost of funds in the new market could disappear by yearend, Ms. Syracuse said.

Optimism at Citibank

While some banks and brokerages may lose some existing business, the business generated at Citibank by the new 144A market will be all gravy, an official there said.

With much of the initial activity expected to come from the Eurobond market, there is no downside to the new 144A market for Citibank, since the bank is not active in that market, said Timothy Conway, vice president in charge of private placements at Citibank.

Issuers in the new 144A market will be looking for seven- to 10-year term financing, Ms. Syracuse predicted, and "banks are not competitive for that kind of money."

Many observers said they think commercial banks will be on an equal footing with investment banks in the 144A market.

"I think it's a level playing field," said Sara Hanks, a former SEC staffer who drafted much of the rule. She is now a lawyer in New York with Rogers & Wells.

However, the head of private placements at one bank said he thinks most commercial banks will be at a competitive disadvantage. He contended that the new 144A market will really be a "quasi-public market." ☐

Cable Industry Losing Access To Bank Credit

Continued from *page* **16**

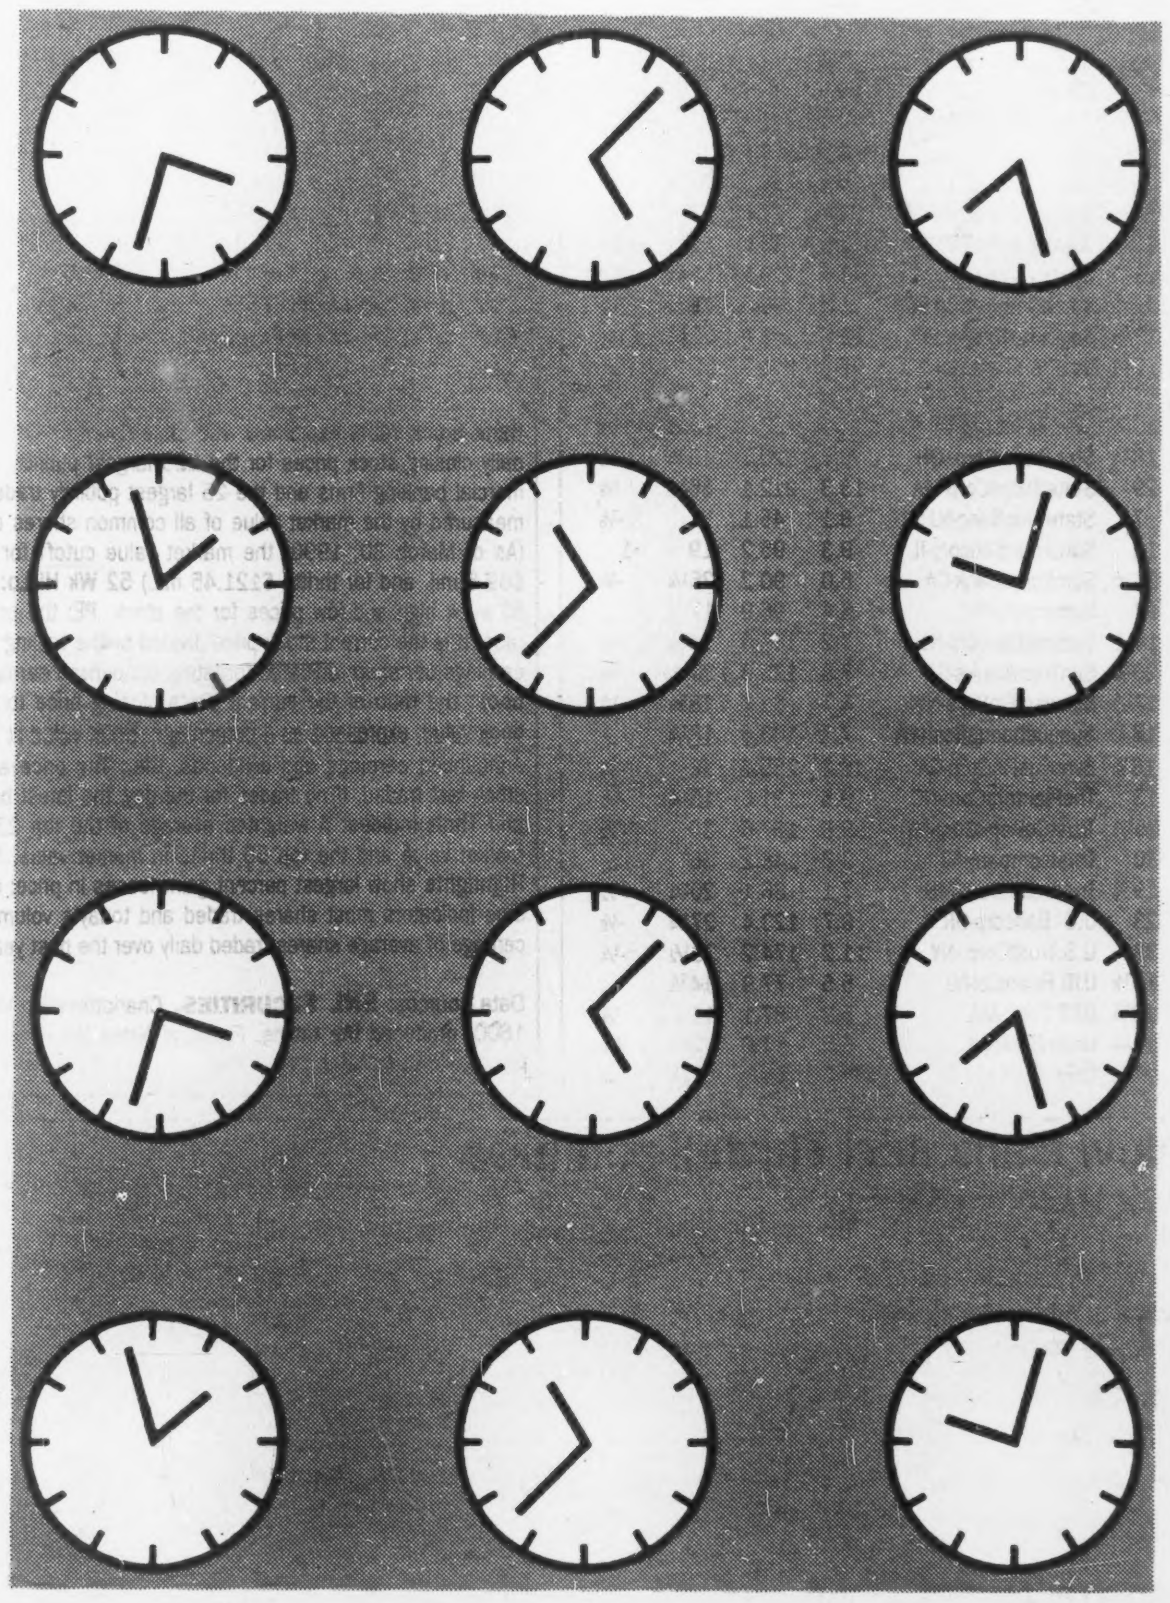
kol, a finance associate at Telecommunications, "but we are getting a better rate In Europe."

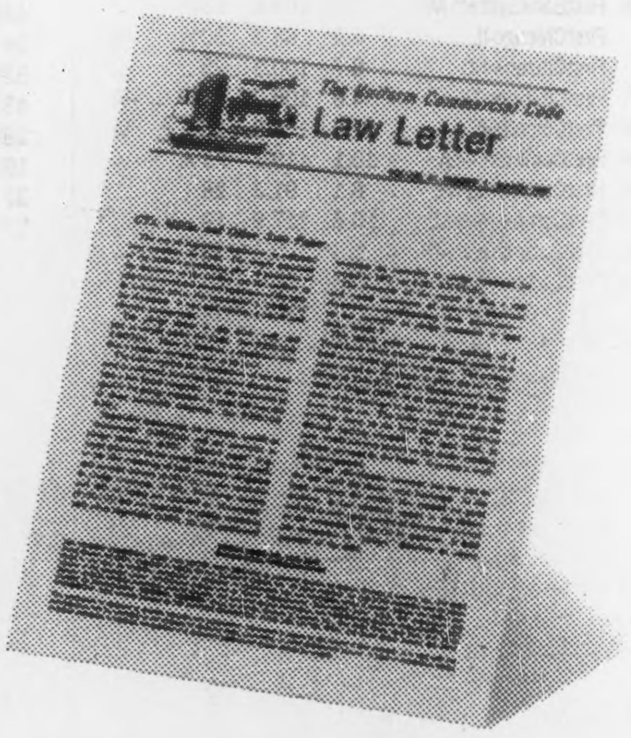
Junk Bond Fallout

The collapse of the junk bond market has thrown cold water on cable lending too. Fueled by a wave of of acquisitions, cable industry lending grew rapidly through the 1980s with outstanding loans more than tripling to $22.7 billion at yearend 1989 from $6.2 billion in 1983, according to Paul Kagan Associates.

"Until the uncertainty ends and alternative sources to mezzanine financing develop, I don't think there is going to be much activity," said Elizabeth Hope, senior vice president for communications lending as National Westminster Bank USA.

"Systems aren't moving as fast as they once were," said Juliette Turner, the cable industry analyst at Moody's Investor Service. "This is partly the result of the lack of financial players in the market." ☐





You can spend hundreds of hours keeping up with UCC legal developments.

Or you can subscribe now.

Hundreds of cases involving the Uniform Commercial Code are decided in the courts *every month*! Keeping up with on-going litigation requires hundreds of hours work…unless you have Quinn's monthly **Uniform Commercial Code Law Letter** at hand.

Each month, **Uniform Commercial Code Law Letter** reviews the state and federal cases with the greatest impact and the most far-reaching changes, covering *all* the important elements of each case. Giving you the information you–or your clients–need to stay on top of changing UCC law, the **Letter**'s comprehensive coverage includes:

- Analysis of the major points in each case, with clear definitions of positions and arguments of both sides
- Discussion of the factors that went into the decision and how it fits within the UCC framework
- Precise, practical commentary on a decision's impact on business governed by the Code and how you can adapt.

Written by Thomas M. Quinn, a nationally recognized authority on the UCC who is often cited in court opinions, **Uniform Commercial Code Law Letter** also contains a "Consumer Credit Report," which keeps you up-to-date on such critical issues as:

- Truth in Lending
- Fair Credit Billing Act
- Electronic Funds Transfer Act
- FTC Credit Practice Rules
- Fair Debt Collection Practices Act

With a subscription to **Uniform Commercial Code Law Letter**, you'll get monthly advice from a UCC expert who'll give you jargon-free analysis, useful planning guidance, and help you and your clients stay in compliance with the UCC. And you'll save a lot of valuable time. Subscribe now.

Bank Earnings Still Vulnerable, Analysts Believe

By JED HOROWITZ

The first-quarter earnings reported by most of the money-center banks were in line with most analysts' expectations. And that was not good news, considering that the forecasts had been on the glum side.

Worse, the reasons for the declines in earnings are, for the most part, still present. They include:

- Deteriorating credit quality in real estate and highly leveraged transactions are the big topics of the day, and they are not fading. Many banks hinted in reporting their earnings that reserves and chargeoffs would get worse before they get better.

ANALYSIS: *Follow-up on the news*

- Pressures on net interest margin continue unabated at most money-center and regional holding companies, while demand for new loans remains anemic.
- Banks hoping to balance the loss of their traditional loan income with fee-based advisory and syndication activities offer little encouragement. Near-term relief in these areas is almost nonexistent because of the lull in the leveraged-buyout and real-estate construction markets.
- Income from trading – up at some banks and down at others in the quarter – remains an unpredictable factor on a quarter-by-quarter basis.

The big disappointments of the first quarter among money centers were Chase Manhattan Corp. and Citicorp, which declined 67% and 56% respectively from their 1989 first-quarter levels.

Better Results Expected

Both banks said large provisions for possible credit losses were a prime reason for the decline, and said certain provisions and expenses were shaping them for better results.

The banks offered little hope for a quick rebound, noting especially that real-estate values may continue to decline.

More than one analyst is worrying that Chase's dividend, in particular, could be in danger. Chase earned 20 cents a share, but needs the equivalent of 78 cents per quarter to cover its dividend, says Richard Fredericks, a securities analyst with Montgomery Securities, San Francisco.

"Chase, as well as other banks, will have to cover its dividends by earnings, not promises, going forward," he wrote in a recent report

LATE NEWS

Citicorp Rating Cut

Standard & Poor's Corp. late Thursday afternoon downgraded the debt of Citicorp and several of its units, citing relatively low capital levels. The rating on Citicorp's senior debt was lowered to AA-minus from AA. Citicorp's subordinated debt was lowered to A-plus from AA-minus.

The downgradings affect about $30 billion in debt, the agency said. Commercial paper ratings were reaffirmed at A1-plus.

Electronic Tax Filing Soars As Banks See Its Advantages

By ELLEN MEMMELAAR

NEW YORK — With banks actively promoting the Internal Revenue Service's electronic tax-filing service for the first time, the agency reported a boom in such transactions this year.

The IRS said it received 4.2 million returns electronically, via telephone lines from banks and tax preparers. The volume, equaling almost 4% of all individual tax returns, quadrupled that of 1989 and doubled the IRS' 1990 projection.

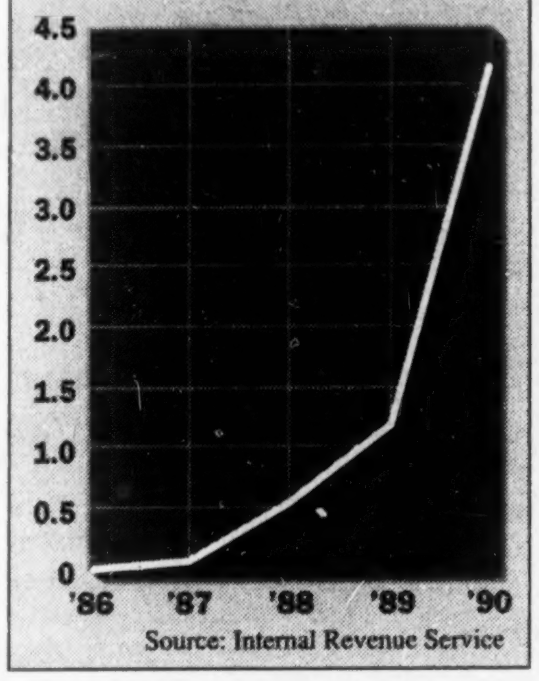
Speedier Refunds

The main selling point of electronic filing is that refunds are deposited directly into a designated bank account within two weeks instead of the usual six. Banks and other participants earned fees of $30 to $50 for transmitting each electronic return, and the faster turnaround meant an earlier-than-usual surge of refund deposits.

"It was an outstanding season," said Steven Guido, president of Electronic Filing Centers Inc., a company that banks and credit unions use to process electronic returns. "All of the banks exceeded their expectations."

Speedier Returns

Individual tax returns filed electronically, in millions



Source: Internal Revenue Service

Among Mr. Guido's customers, which include BankAmerica Corp. and Great Western Financial Corp., 60% of the tax refunds went into savings accounts. This money is likely to remain on deposit longer than would checking account deposits, he said.

Customers whose returns are filed electronically also get refunds greater than the average of

Large Banks Seek System To Minimize Check Risks

By KAREN GULLO

NEW YORK — Facing a September deadline to speed the availability of funds on deposited checks, several major banks may form a nationwide clearing house to help them guard against losses from checks that are not backed by sufficient funds.

Working with a consultant, First Interstate Bank of California, Wells Fargo Bank, and other large regional and money-center institutions are discussing the formation of an association that would process each other's checks using a technique known as electronic check presentment. The banks would begin the funds collection process by transmitting data from the magnetic-ink line on checks, rather than waiting for the checks themselves to be delivered via air and ground transportation.

The banks want to speed the delivery of transaction data to

Real Estate Woes Cut Net at C&S, Bank of Boston

By TOM LEANDER
and KENNETH CLINE

Big increases in problem real estate loans forced Bank of Boston Corp. and Citizens and Southern Corp. to post sharp drops in earnings and Ameritrust Corp. to report a $51.6 million loss.

Meanwhile, Shawmut National Corp., Hartford, Conn., which was forced by regulators to restate its fourth-quarter earnings because of problem real estate loans, said its first-quarter profits fell 37%, to $40.6 million.

Share Prices Show Gains

Investors appeared to shrug off the results, which in some cases were not as bad as expected. Bank of Boston's stock closed at $12.125, down 12.5 cents. Atlanta-based Citizens and Southern rose 50 cents, to $23.875; Ameritrust climbed 12.5 cents, to $18.25; and Shawmut, 37.5 cents, to $14.25.

Bank of Boston said its first-quarter profits fell 49% to $44 million, from the $89 million earned in the period a year earlier. Without nonrecurring gains, Bank of Boston would not have posted a profit,

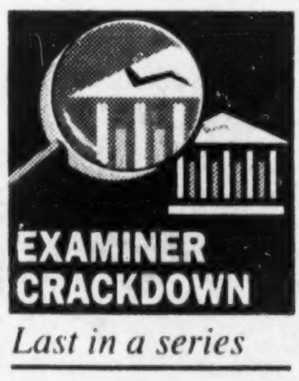
Analysts Keep Ears to the Ground To Learn Next Target for Exams

By BILL ATKINSON

Ever since a troop of examiners swept into New England, zeroing in on real estate portfolios, bankers and stock analysts alike have been burning up phone lines to find out when and where the regulators will turn up next.



Last in a series

The huge losses posted by Bank of New England Corp. and Shawmut National Corp. following regulatory reviews have injected a huge dose of uncertainty into the examination process, leaving bankers in other regions wondering if the same medicine is in store for them.

And analysts, worried about the impact on stock prices, have set out to chronicle the examiners' every move.

"Anywhere they are, the stocks suffer," said Lacy Shockley, a vice president at Smith Barney, Harris Upham & Co.

So far, the Office of the Comptroller of the Currency has focused on the East Coast, including Florida, where units of Barnett Banks Inc. and Southeast Banking Corp. have been

COMMENT/*By Stanley M. Huggins and Mark D. Guthrie*

Benefit Plans Help Conserve Scarce Resource: Managers

We have almost 40,000 providers of financial services in the United States, including about 14,000 commercial banks, 2,500 thrifts, more than 15,000 credit unions, and 3,000 to 4,000 in insurance, securities, and related industries.

Quite simply, with the increased complexity of the financial services industry, we do not have enough competent and qualified senior managers to operate this number of companies. Consequently, competition for high-quality management will continue to increase.

Determining appropriate compensation and benefits strategies is a major challenge for financial institutions. What follows are several major areas of concern, and practical points to help institutions deal with them:

Cost and Complexity. Be realistic about the cost and complexity of compensation plans. Many so-called experts tend to recommend the most complex and expensive plan for every institution regardless of its size or needs. Review carefully the cost of designing and administering the plan and the ability of employees to understand its complexity.

Do not forget to check how difficult it may be to terminate the plan if it proves unsuccessful or inefficient.

Tax Considerations. A thorough review of the tax implications must be made. The Tax Reform Act of 1986 substantially affected executive compensation and benefit planning. The new law discourages conversion of compensation into capital gains, compensation based on borrowing, and incentive stock options. It encourages cash bonuses.

Unfriendly Takeovers. Many executives are nervous in the current takeover environment. They may prefer short-term compensation rather than future compensation. As one observer recently stated, "the dollar bill is the ultimate flexible benefit," allowing executive to purchase whatever benefit they choose.

Market for Stock. Only a few hundred of the almost 17,000 banks and thrifts have an active market for their stock. In these cases, it may be necessary to create an artificial market for stock, or phantom stock in the form of stock appreciation rights, for executives.

Institutions may implement such a strategy by offering to buy back shares or paying an amount equal to the appreciation of phantom shares. The amount paid to the executive is based on a specific formula agreed to by the institution and the executive at the time of implementation. Obviously, such plans may use any formula that is appropriate, such as book value, a multiple of earnings, return on equity, return on assets, or other criteria.

Accounting Issues. Always be certain to review accounting considerations. In many instances, even though there is no immediate cash or tax effect, generally accepted accounting principles may require the company to take a hit on earnings immediately upon entering into the agreement or plan. Also, check the applicable regulatory accounting principles to determine whether they are different from GAAP.

Holding Company or Bank? Make sure you understand the differences between placing the executive compensation structure within the bank and placing it within theholding company.

Holding companies are generally not subject to restrictive regulation of employment contracts, benefit plans, and other elements of a compensation package, while banks and thrifts are directly regulated by the Federal Deposit Insurance Corp., the Office of the Comptroller of the Currency, or the Office of Thrift Supervision. More flexibility is available in plans at the holding company level.

There may be considerations, however, that limit the funding of plans since many holding companies have no independent source of cash flow other than dividends from the subsidiary institution.

Nonqualified Benefit Plans. In many cases, qualified pension, profit sharing, and annuity plans cannot be used effectively to provide deferred compensation for executives and key employees because the benefits must be uniform, nondiscriminatory, and applicable to employees as a whole.

Since the Tax Reform Act of 1986, employers are discovering that new demands and constraints placed on qualified plans may outweigh the benefits.

Nonqualified plans may provide the flexibility needed to offset the impact of the 1986 Act without jeopardizing the balance between providing competitive incentives and holding down the costs of funding and administration.

> **'In many cases, qualified pension, profit sharing, and annuity plans cannot be used effectively because the benefits must be uniform, nondiscriminatory, and applicable to employees as a whole.'**

Several types of nonqualified plans that may assist an employer in the development of workable comprehensive compensation package are:

- Excess benefit plans.
- Insurance arrangements.
- Top hat plans.
- Golden parachute payments.
- Deferred bonuses.
- Nonqualified stock options.
- Rabbi trusts.
- Phantom or shadow stock plans.
- Secular trusts.
- Other nonqualified annuity arrangements.

Cash Availability. Perhaps the most obvious but often overlooked issue is the impact of the plan on cash flow. Plan ahead regarding when the institution will be required to fund its obligations. ☐

The authors are principals of Huggins & Associates, a consulting group based in Memphis, Tenn.

FUNNY MONEY/*By Tom Leander*

New England Town Puts Bear in Stocks

New England bank stock analysts may be falling prey to that old adage about killing the messenger who brings the bad news.

That, at least, was Gerard S. Cassidy's impression when a fellow employee at Tucker, Anthony & R.L. Day told him of his reputation at One Bancorp, a bank in Portland, Maine, that has been hard hit by real estate woes. Mr. Cassidy is well known in New England business circles for his gloomy prognosis about the area's bank stocks.

The employee – a salesman – had just returned from a meeting with a loan officer of Maine Savings Bank, a One Bancorp subsidiary, and retold this conversation.

"Are you a junior member of the staff at Tucker?" the loan officer reportedly had asked the salesman.

The salesman replied that he was.

"Then it must be your job to go out into the parking lot and turn on the ignition of Gerard Cassidy's car," said the loan officer.

"What do you mean?" asked the salesman.

"To see if it's been rigged with a bomb."

Mr. Cassidy, who takes such quips in stride, notes that the local press has taken to calling him the *Ursus Horribilis* – latin for Horrible Bear – of New England bank stock analysts.

* * *

Broken Point

Prosecutors sometimes reach for oratorical grandeur in a bank crime trial – and end up hitting the funny bone.

Such was the case on Monday when, in his final speech to the jury, assistant U.S. Attorney Daniel Clancy likened Rep. Harold Ford, D-Tenn., to a bank robber.

Mr. Ford is accused of taking $1.5 million in fraudulent loans, in 18 payments between 1976 and 1983, from banks controlled by brothers Jake and C.H. Butcher Jr.

"Congressman Ford makes $80,000 a year. Contrary to what politicians tell us, you can live on that," Mr. Clancy said in closing arguments. "But they got many, many hundreds of thousands of dollars, more than any bank robber ever got going in carrying a gun and holding up a bank. You might say they had a .38-caliber pencil."

Mr. Ford says he is not guilty of fraud and predicted a quick acquittal.

* * *

Plush Promotion

Is there no end to the California retail banking wars? First it was round-the-clock telephone access, then Saturday banking, then five-minute teller service guarantees.

Now Bank of America has raised the ante again. Any customer applying for a Visa or MasterCard at its main San Francisco office this month gets "a cuddly stuffed bunny" as a token of Bank of America's gratitude, a flier mailed by the branch announces. A bank spokeswoman said the promotional bunnies will be offered through next week.

Crosstown rival Wells Fargo Bank says it won't match the offer. "We're not into stuffed animals," a spokeswoman said.

— **Sam Zuckerman**

* * *

Fig Leaf Brigade

First Bank System Inc. launched a program last year to showcase its $9 million art collection and display its paintings in corridors and in a special gallery.

But when some paintings spurred protests from bank workers because of their subject matter, the bank organized a "feedback" forum to allow employees to vote on the merits of the work. Pieces that received a thumbs-down from more than six workers were consigned to a single hallway, which was dubbed Controversy Corridor.

But many employees were uncomfortable with the corridor and wanted to get rid of it, according to bank spokeswoman Christine Mahai. The bank canceled the feedback sessions and closed the corridor.

But it's still stirring controversy. Lynne Sowder, the bank's former art curator, and Nathan Braulick, former director of the communications/visual arts division, wrote a joint letter that appeared in the February issue of *Metropolitan Home* charging that the bank's management closed the corridor gallery because it was too provocative.

— **Stanley Holt**

Morgan Guaranty Rallies In Municipal Guarantees

By KIMBERLY REIFEL
Global Guaranty

Morgan Guaranty Trust Co., ranked ninth last year among providers of letters of credit in the municipal securities industry, surged to the No. 2 position with $413.3 million in principal backed during the first quarter of 1990. The letters are bought by municipalities to enhance the credit rating and marketability of the securities they issue.

Morgan was second to only Fuji Bank, which continued to outpace all competitors by chalking up $545.2 million in new issues enhanced in the first three months of 1990. Morgan Guaranty's performance lifts it past its total volume last year of $341.7 million.

Letters of Credit Enhancement

LC Bank	Principal ($ in mil.)	No. of Issue
Fuji Bank Ltd.	$545.2	6
Morgan Guaranty	413.3	7
Sanwa Bank	304.5	2

Source: Global Guaranty

Morgan Guaranty's rise was partially attributed to increasing concerns by municipal investors about exposure to Japanese banks' letters of credit enhancement, say market sources.

Moreover, Morgan Guaranty's total was increased by replacing the Industrial Bank of Japan as the letter provider on a $250 million Piedmont Municipal Power Authority transaction.

"This is the first time a bank from the U.S. has won over a highly rated Japanese bank," said a Japanese banker.

Fuji Bank, No. 1 last year, backed six deals during the first quarter of this year. Its largest deal was a $170 million issue for the Massachusetts Bay Transportation Authority.

Sanwa Bank, with $305 million in volume, lost its second-place position to Morgan Guaranty. However, Sanwa backed the largest deal of the first quarter – a $278.5 million offering by Chicago.

Two Swiss banks climbed into the top 10 during the first quarter. Union Bank of Switzerland finished fourth on the strength of its only large deal in the quarter, a $229 million offering by Massachusetts. Swiss Bank Corp. finished ninth with volume of $97.6 million on two deals.

THE NETHERLANDS

Amsterdam-Rotterdam NV and **Algemene Bank Nederland** NV said Thursday they had pledged to trades unions not to dismiss any workers with permanent job contracts because of the banks' planned merger.

The banks said they made the pledge to reassure those employees who had feared substantial layoffs.

ABN and Amro first announced merger plans in March. ABN's chairman, Robert Hazelhoff, said recently he would be disappointed if the talks could not enter their final stage before August.

— Reuters

JAPAN

Fuji Bank Ltd., responding to a decision by **Moody's Investors Service** to put the bank's credit rating under review, said Thursday that the basis for the review was not clear.

On April 24, Moody's said it might downgrade Fuji's senior AAA debt rating because of concerns about the bank's real estate-related exposure, interest rate risks, and high-leverage transactions in the United States.

Fuji said it believes it asset quality is one of the highest among the Japanese city banks and that its real estate financing is supervised with "extreme caution."

Fuji said it would discuss Moody's concerns with the rating agency after closely examining the contents of the review. The Japanese bank also said that its exposure in real estate was in line with that of other banks its size.

— Reuters

NEW ZEALAND

The **Bank of New Zealand** said Thursday it would lay off 216 people in an effort to improve its competitive position in the 1990s.

BNZ said the branch network would lose 130 people. It said a compensation package had been negotiated. BNZ now employees 6,250 in New Zealand.

In a statement, BNZ's chief executive, Lindsay Pyne, said the layoffs were needed.

"The reality is, the bank had allowed an imbalance to develop in its graded staff, where we had too many staff at certain levels in the bank and too few at others. This balance could only be restored through restructuring," he said. ☐

American Banks Seen Losing Edge

Credit Slide Threatens Market Share, U.K. Rater Says

By JAMES R. KRAUS

NEW YORK — U.S. banks' low credit ratings could destabilize the international financial system and cost the banks market share in this country and abroad, Robin Monro-Davies, managing director of IBCA Ltd., has warned.

London-basded IBCA is the largest credit-rating agency outside the United States.

Speaking Thursday at a Salomon Brothers seminar on international banking, Mr. Monro-Davies noted that in the past decade U.S. banks' credit ratings have sharply deteriorated – to the lowest level among major Western industrialized nations.

'Profoundly worrying'

'The differential is profoundly worrying. If [U.S.] banks, as financial intermediaries, become regarded as inferior credits, they will no longer be regarded as safe places to keep money – and the rationale for having them begins to disappear," the executive said.

Lower credit ratings, he said, are forcing U.S. banks to pay more for the funds they borrow, putting themselves at a competitive disadvantage with foreign banks.

According to an IBCA compilation, credit ratings for the top 11 U.S. banks now average between A and A-plus, while Switzerland's top banks average triple-A, Holland's double-A-plus, and Canadian and Australian banks double-A.

A Slide from Triple-A

Mr. Monro-Davies noted that barely a decade ago most top U.S. banks had a triple-A rating. He attributed the subsequent slide to a surfeit of banks in the United States, lack of loan diversity, and pressures on management to deliver ever-higher quarterly earnings.

U.S. banks' earnings are also coming under renewed pressure as regulators tighten reserve requirements against nonperforming real estate loans, he added.

"U.S. banks suffer far greater pressure on earnings than other banks," Mr. Monro-Davies said. No one can plan a business on a quarterly basis, he remarked.

"My profound hope is that we are near the bottom [in the credit-ratings slide], but I don't say that with tremendous confidence." Real estate loans "still give us grounds for further concern," he said. ☐

Barclays Negotiating to Buy French Bank

By JAMES R. KRAUS

NEW YORK — Barclays Bank PLC has made a bid for a French bank and is seeking an acquisition in West Germany as part of an expansion throughout Europe, according to a senior Barclays executive.

Jacques Rambosson, chairman of the bank's $5 billion French subsidiary Barclays Bank SA, declined to disclose the name of the bank Barclays is bidding for in France.

He said Barclays needs to make an acquisition in France to obtain a "critical mass" in the personal finance market that would allow it to double revenues controlling costs costs.

Concentration in Spain

Barclay's has 34 branches in France and 230 in allin 11 Continental European countries. The majority are in Spain. The European branches account for about 8% of Barclays' total worldwide assets of $190 billion.

Any expansion by Barclays' Spanish and Italian operations will come from internal growth, Mr. Rambosson said in an interview.

A Foothold in Europe

He added that the bank's second major objective in Europe is to acquire an investment banking operation in West Germany. Barclays has branches in Frankfurt, Dusseldorf, and Hamburg as well as leasing and finance offices in Munich, Stuttgart, and Frankfurt.

"You need to acquire a bank in order to penetrate the German market," said Mr. Rambosson. He cited close relations between West German corporations and banks as the main barrier to foreign banks that are seeking to enter the German market.

"Foreign intruders don't stand much of a chance in Germany," Mr. Rambosson said. He added that there was an unspoken agreement between banks and German companies not to deal with "intruders," especially when it comes to mergers and acqusitions.

According to Mr. Rambosson, Barclays intends to add further expand its European network as opportunities arise. He said the bank expected a fair amount of restructuring in European banking that would enable it to buy operating units. ☐

Tokai Adds Three U.S. Offices

Tokai Bank Ltd. opened representative offices in San Francisco, Minneapolis, and Columbus, Ohio, on Thursday, the bank announced.

The bank said that the move marked the largest expansion for Tokai Bank in the United States since it established operations here in 1954.

Yukio Sakai, deputy general manager of Tokai's regional planning and business development group in New York, said the offices have been opened in the three cities because of strong local economies and the presence of leading corporations.

Tokai already has branches in New York, Los Angeles, Chicago, Atlanta, and the Cayman Islands, as well as representative offices in Dallas, Lexington and Toronto.

The $245 billion-asset bank has headquarters in Nagoya, Japan, and is the world's eighth-largest bank.

Will Downgrade Force Citicorp To Pull Back?

By JED HOROWITZ

Although Citicorp's debt rating was lowered only a notch on Thursday, some observers are asking whether the nation's largest bank will have to curb its global game plan.

"They had been the last bank to think they could be all things to all people," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co. "I think that even they are beginning to realize that they can't be."

Citicorp, indeed, ended its global merchant-banking ambitions last year when it closed its London brokerage operations. Also, it has made no commitment to middle-market lending and is selling some small retail branches in nonstrategic areas.

ANALYSIS: *Follow-up on the news*

"There is probably going to be a hard look at the strategies to see whether or not they are too encompassing," said James McDermott, head of research at Keefe, Bruyette & Woods. "I would think that with all the good things that go on in the retail bank, management would want to take a hard look at the wholesale side."

Action by S&P

Nancy Newcomb, senior corporate officer at Citicorp for finance and funding, said that Citicorp has no plans to scale back its global ambitions.

Touching off the question was the decision by Standard & Poor's Corp. on Thursday to lower the rating on Citi's long-term debt. Standard & Poor's said Citicorp's "aggressive capital philosophy leaves it diminished flexibility to face increased risks in the general business environment."

One week earlier, Moody's Investors Services put all Citicorp's securities under review for possible downgrade.

There is little argument that Citicorp's equity and reserve ratios are lower than its peers'. But analysts said the bank company should have no trouble meeting its goal of bringing its common equity-to-reserve ratio from 3.6% to 4% by year end.

Regulatory Pressure Unlikely

And few believe that regulators will force Citicorp to make debilitating additions to its loan-loss reserves or restrain its global ambitions.

On Friday, Citicorp officials backed off from providing a timetable for restoring their eq-

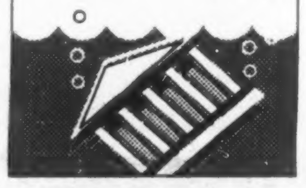
Thrift Fiasco Threatens to Soak Broad Segments of U.S. Economy

By JEFFREY MARSHALL

The thrift bailout, now concluding its ninth month, has evoked a lot of imagery about immensity: elephantine bureaucracy, a Grand Canyon-size fiscal hole, mountains of tainted assets. But perhaps no analogy is more frightening than L. William Seidman's.

THRIFTS: *The Crisis Worsens*



First in a series

"The bad news is that we've seen just the tip of the iceberg," the chairman of the Federal Deposit Insurance Corp. said not long ago. "The worst is yet to come."

In the face of what the General Accounting Office estimates is a $325 billion problem, Mr. Seidman's forecast is chilling. But his analogy strikes many observers as dead on. Unless the rescue gets under way in earnest soon, the government's flailing about, they say, seems more than anything like rearranging the deck chairs on the Titanic.

Launched with much fanfare in August, the Financial Institutions Reform, Recovery, and Enforcement Act has become a giant liner adrift in dangerous

Downgrade Of Citicorp Contributes To Gloom

By KELLEY HOLLAND
and JOHN EVANS

The downgrading of Citicorp's debt by Standard & Poor's Corp. deepened the gloom among some bankers and investors, who worried that the news could tarnish even further the sullied image of commercial banks in the credit markets.

"There is a herd mentality in the marketplace tending to tar all banks with the same brush," said Lawrence Rosencrantz, treasurer, U.S. Bancorp, Portland, Ore. "Citicorp is the leading bank in the country and what happens to them is a leading indicator for other banks. This is not a helpful occurrence."

A Silver Lining

But there was a silver lining to the news. The downgrade on $30 billion in long- and short-term debt was slight, with senior debt lowered from AA to AA-minus. for example. Michael DeStefano, a vice president at Stan-

Troubled Bank of New England Out $46 Million

By TOM LEANDER

NEW YORK — Sapped by problem real estate loans, Bank of New England Corp. Friday announced it had lost $46.6 million in the first quarter.

The loss reflected a $151 million provision for possible loan losses, a newly created $48 million reserve for other real estate owned, and a $20 million loss from operations. Much of the red ink was offset by a one-time gain of $173 million related to the sale of assets.

Losses Were Expected

The losses were in line with expectations, but analysts emphasized that the bank company is in precarious financial condition.

"It shows continuing deterioration, which is disturbing, not only for Bank of New England but for New England in general," said Gerard Cassidy, an analyst at Tucker, Anthony in Portland, Maine.

"They've instituted a hard-charging plan to survive," Mr. Cassidy said, "but even manage-

Number of Credit Unions Shrinks As Growth Slows and Profits Dip

By BILL ATKINSON

WASHINGTON — In the latest sign of consolidation of credit unions, the industry declined by 148 institutions last year while the assets of the 100 largest grew 7% to $47.1 billion, according to data compiled by the consulting firm Callahan & Associates.

The data also showed that the industry's overall growth has slowed dramatically, with profits down and capital up.

A rash of mergers and liquidations caused a 17% drop in the number of credit unions to 14,884 at yearend 1989, from 18,006 four years earlier, the Callahan data show.

Meanwhile, the 100 largest, listed in a table on page 23, increased their assets by 60% over that period. Those big credit unions are the principal targets of a lobbying campaign by the American Bankers Association, which contends that, as full-fledged banking competitors,

COMMENT/*By Paul S. Nadler*

Why Is Bank the Bad Guy When Borrower Goes Bust?

"Thank God most people are honest, or we would all be out of business," a companion at a recent meeting of the New York Credit and Financial Management Association commented.

And all I could think is that if a student gets a 90 on my exam, he or she gets an A, but if a bank gets 97% of its loans paid off, it goes out of business. The 3% of defaults would far more than wipe out the profits even of an institution able to earn 1% on assets.

The amazing thing is that banks have been able to prosper for so long and that the present spate of loan losses and heavy chargeoffs is something most of us have never before witnessed.

Laws Favor Borrowers

Getting your money back in today's environment is not easy. The laws generally assume that the borrower is the poor little waif who must be protected, while the lender is a villain trying to take advantage of the debtor.

Look at the bankruptcy laws.

Having just had a speakers bureau that owed me money go bankrupt, I was amazed to read the form the court sent me, telling me not to dare try to collect from or harass this individual. To do so would violate the law.

The head of a major airline's credit union told me that a pilot can declare bankruptcy while earning well over $100,000 a year, yet the credit union is not allowed to place that information in the pilot's personnel file.

Going First-Class

Life goes on, and somehow most of those who have declared personal bankruptcy continue with their lives as if nothing had happened. Most of these people have lived with the attitude: "If first-class is sold out, I'll wait for tomorrow." And now, when this comes home to roost, it is the banks and the tradesmen who pay for those elaborate lifestyles.

I guess this is a lesson that every generation of bankers must learn for itself.

The "young Turks" come in with the feeling that banking is a new world, that computers and cash flow forecasts mean more than looking in the customer's eyes.

But now, as one of my retired friends at that credit management conference put it, "All of a sudden, they are coming back to me and asking for help now that they have troubles, when no one wanted my advice for years in the glory days."

And I remember when my father was asked by a major New York bank's chief executive officer: "Why do we do so poorly with the little merchants in New York City while the other banks make money doing business with them?"

My father's answer: "It seems to be because your officers feel that because a man's business is small, he is a crook, while the large borrowers are honorable and dependable.

"Yet it is often just the opposite: The big borrower doesn't care because he knows that if he doesn't pay, the bank is in more trouble than he is. But the little guy doesn't sleep at night until he has been able to repay his bank debt because he knows he needs the banker so badly."

And I saw this attitude reconfirmed at meetings of the board of the real estate investment trust with which I was connected for a decade – until it became the largest bankruptcy in the Southeast.

Whenever the topic of repaying the banks came up, the attitude of so many officers was, "Let them wait. We have their money. What are they so anxious about?"

The irony of all this is that we are a nation that complains about how few people save and how many borrow. Yet we do everything in our power to protect the borrower and punish the saver-lender. We act as if borrowers are all poor people who need the funds and as if lenders are "fat cats" who milk the borrower to build their up wealth even further.

In reality, it is often just the opposite: The saver is the worker who puts away $10 or $20 a week, and the borrower is financing a good home or an investment opportunity.

Deregulation Has Helped

At least, it is not as bad now as before deregulation, 7½ years ago, when interest rates were kept low to aid the borrower while the saver was denied a market return on his bank deposits to make this aid possible. But our laws and attitudes still make criminal the desire of a lender to get his money back.

I was recently asked by a public advocate on a television panel: "Why do the banks take advantage of people who just want to borrow money?" I tried my best to answer, "Lady, you have it backward."

But as long as the public thinks that banks are rich institutions with vaults filled with silver and gold, this will be a hard concept to get across, no matter how high the loan losses get in 1990 – the worst year banking has seen for half a century. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

For the better part of the last six months, bank stocks have been hammered by worries about rising interest rates, high-leverage loans, and reductions in debt ratings, while the overall stock market has at least held its own. Some analysts attach great importance to short-term blips in stock prices, while others say factors like earnings performance and sources of fee income are better indicators of a stock's quality. Financial writer Merri Rosenberg asked several people for their views.

Q ***Is too much attention paid to short-term price movements in bank stocks? What other factors should be considered?***

■ Gerald H. Lipkin
Chairman/chief executive officer
Valley National Bancorp

Every morning I check in on how we're doing, and I try to monitor our peers and competitors every day. I think our shareholders are concerned with the movement in stock prices day by day, but I don't think analysts pay as much attention to day-to-day stock prices as to quarterly earnings.

There's too much attention paid to short-term performance in general, and that makes it hard for a CEO to pursue strategic planning. People increasingly are focusing on short-term performance, and that's not good in the long term for the health of the country. In general, shareholders and analysts pay more attention to the short-term performance of the company.

But for a company to perform well in the long term, it may have to make decisions that will have an adverse effect on earnings in the near future.

■ Lacy Shockley
Vice president
Smith Barney, Harris Upham & Co.

It really depends. Every investor has a different time horizon, and some of them are virtually weekly or monthly. Bank stocks tend to trade in big cycles, relative to the economic cycle. They tend to do well when the relative earnings look good to the market. With long-term investment money, you can pick real high-quality banks and hold them for a long time. But you have to be very selective.

You can have large fluctuations in a short time. Right now, the banking group is so out of favor that none of the stocks are trading at high volume. That creates less efficient markets. In the last 10 to 15 years, banks have gone from being a relatively homogeneous group to a diverse group.

You have to look closely at the structure, and at the geographic area. For example, bank stocks do better if there are strong sources of fee income, and right now the Midwest might be doing better than the Northeast.

■ Fred Meinke
Vice president,
Senior bank analyst
Raymond James & Associates Inc.

I think it's important to stay in touch even with intraday changes in the stock. I look at the Quotron six to eight times a day, more if something's going on.

The key point is that this gives you some idea of what the investor thinking consensus is and can keep you alert to fundamental concerns as well. It can be an early warning of people's concerns about fundamental change. Changes in a bank's stock price can give a sense of the expectations regarding a particular bank's performance.

However, watching the price of a stock and translating that into investment value are related, but not necessarily the same thing. It's also important to watch longer-term trends. Long-term patterns are very important in determining whether or not a stock should be purchased. There's been tremendous pressure for investment performance coming out of a decade of very high growth, and we may be going into a period of slower growth – so fluctuations on the short-term front may not be as important.

■ Stephen Berman
Vice president/bank analyst
County NatWest Securities Corp.

I watch the short-term fluctuations very carefully. They indicate investors' reactions to perceptions, expectations, and rumors. Sometimes I agree with those movements, and it confirms what I think already; other times I have no idea why this happens. For example, I may see that a bank's earnings are terrific, but the stock is down. When I don't understand what's happening, I'll give the bank a call.

But stock price movements don't have much to do with the value of a stock. I find that investors don't distinguish among banks. The bank cycle is different from the business cycle, and behaves in a unique way. It can be hard to identify what stage we're in.

More and more investors are fairly hunch oriented; if the stock goes up a point or two, and begins to recover, they think it's now the time to buy. But this isn't a terribly efficient market.

Despite Hearings, Restructuring Bill Probably Years Away

By LISA A. HAMMOND

WASHINGTON — To many observers, the Senate Banking Committee's current round of hearings on restructuring the financial-services industry is a lot like the proverbial bad watchdog — all political bark and no legislative bite.

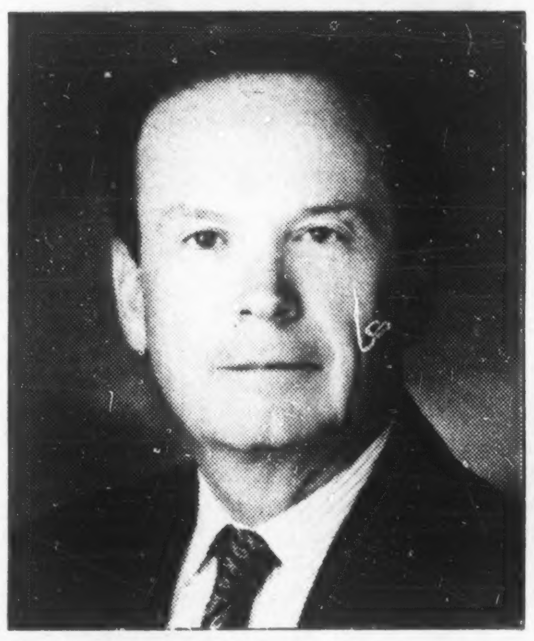
"We've certainly been around this track a large number of times, and there are probably no new facts to be brought to anyone's attention," said Allan Meltzer, an economics professor at Carnegie-Mellon University in Pittsburgh who heads the Shadow Regulatory Group, a panel of academics that monitors the economic soundness of regulatory actions.

Karen Shaw, executive vice president of the Institute for Strategy Development, said: "Nobody has any expectation that Congress will act on this in the near future — the next year or two."

Not Whether, but When

But the industry no longer wonders whether major legislation will come; the question is when. Ms. Shaw says, "The groundwork is being laid for the kind of financial industry change that happens only once every 20 to 25 years."

Industry groups differ on how much they want the change and how soon they expect it.



Kenneth Whipple
Ford Financial Services Group

Philip Vallandingham
Independent Bankers

Perhaps the boldest call for change came from Kenneth Whipple, president of the financial services group of Ford Motor Co. Last week Mr. Whipple, representing the Financial Services Council, a trade group, testified that its vision is to "create a legal structure that would permit any well-capitalized, well-managed company to enter any sector of the industry."

To the other extreme was Philip Vallandingham, president of the Independent Bankers Association of America, which represents community bankers. He told the committee that his group opposes deregulation proposals that would eliminate the separation between commercial and investment banking imposed by the Glass-Steagall Act of 1933, which bars commercial banks from securities underwriting.

Hearings Through July

Committee hearings are to continue through July.

Sources said the Senate panel won't propose expansive legislation before Treasury has finished its study on the deposit-insurance system. The study is due next February, though Treasury sources are now targeting completion by November.

At a hearing Thursday, Sen. Richard C. Shelby, D-Ala., said: "I think it's long past time that we come out with clear legislation to modernize the financial industry."

Lack of Direction?

But many experts doubt that legislative action will come out of this year's hearings, despite the continuing problems in the bank and thrift industry.

"We certainly don't seem to be heading anywhere, and I don't know why not," said a Republican staff aide on the committee. Its chairman, Sen. Donald Riegle, "just hasn't decided what he wants to do," the aide said.

Because the Michigan Democrat has no bill on the table, the hearings are merely for oversight, the aide said. "The chairman is not advocating anything, so that's the next step – and then they'd have to do legislative hearings all over again."

Indeed, the committee held similar hearings in 1988, under the chairmanship of then-Sen. William Proxmire, D-Wis. Since those hearings, few of the interested industries have changed their tunes on the fundamental questions relating to deposit-insurance reform, regulatory changes, and expanded bank powers, although their viewpoints vary widely.

A senior staff aide said Mr. Riegle has no timetable to introduce a bill but the committee will take the testimony "under advisement" to lay a foundation for possible 1991 legislation.

Support for Change

"Nobody is saying much that is new — the positions taken are consistent with what banking and securities firms have said for a while," said Kenneth McLean, the committee's staff director under Mr. Proxmire. "The one real change is that the SIA [Securities Industry Association] has come out for some kind of Glass-Steagall change, but it's a little ambiguous as to how much change they will allow."

SIA official Robert N. Downey told the committee this month that banks should be allowed into the securities business through subsidiaries isolated from their insured-deposit divisions.

In hearings last week, the Investment Company Institute, which represents the mutual-fund-industry, said that it, too, would support some securities powers for banks. But the institute, which traditionally opposed letting banks underwrite securities, said its support depends on permission for mutual-fund companies to engage in activities traditionally reserved for banks.

Ms. Hammond writes for the Medill News Service.

THE WEEK *ahead*

MONDAY, APRIL 30

The Federal Deposit Insurance Corp. holds an open meeting to consider proposed changes to deposit insurance coverage and amended rules affecting the Community Reinvestment Act. Also, the board will seek public comment on issues to be explored in its study of risk-based deposit insurance assessments. 202-898-3813.

SEC Commissioner Edward Fleischman addresses the annual conference of the Association of Publicly Traded Companies, formerly the National Association of OTC Companies, on the topic of current SEC initiatives affecting issuers.

Personal income and spending figures for March are released by the Commerce Department.

The Supreme Court hands down decisions and announces which cases it will hear in the future.

TUESDAY, MAY 1

State banking associations from Maine and Minnesota are in Washington for their spring lobbying visits. Later this week, associations from Rhode Island and Wyoming arrive.

Construction spending figures for March are announced by the Commerce Department.

WEDNESDAY, MAY 2

The Federal Reserve Board meets to consider proposed implementation of certain payment system risk-reduction policies and to consider amended rules affecting the Community Reinvestment Act. 202-452-3000.

The Federal Reserve Board releases the so-called beige book, which contains the Fed staffs' assessment of the economy.

Leading economic indicators for March are released by the Commerce Department.

Factory orders, shipments, and inventory figures for March are announced by the Commerce Department.

THURSDAY, MAY 3

Corporate income tax revenue declines are explored in a hearing of the Senate Finance Committee, chaired by Sen. Lloyd Bentsen, D-Tex.

FRIDAY, MAY 4

The Joint Economic Committee holds a hearing to receive the employment and unemployment statistics for April, released by the Labor Department.

INSIDE *congress*

Shaky Financial Services Industry Still Managed Big Contributions

While the financial services industry has stumbled upon hard times, that has not stopped it from funding the nation's political process.

In the six years through 1988, political action committees representing banks, thrifts, insurance, real estate, and other financial interests forked over $19.2 million to Senate candidates, according to Common Cause, which calls itself a citizens' lobby.

That amount is one-fifth of the $96.3 million raised by all political action committees during that period, according to Common Cause.

ABA Has Most Clout

Among the banking organizations, nobody has more muscle than the American Bankers Association, which expects to spend as much as $2 million in the current election cycle.

In the Senate, the ABA expects to contribute in virtually every election, and in most it will "max out" – give the $10,000 maximum permitted for an election cycle.

"In general, we do tend to be a maximum player in every Senate race," said Edward L. Yingling, the ABA's chief lobbyist. "On the House side, we are trying to reach out to committees other than banking."

The Independent Bankers Association of America, by contrast, tries to raise $135,000 a year, which would give it $270,000 for the two-year election cycle.

"We try to use our money to be visible," said Stephen Verdier, who lobbies the House of Representatives for the Independent Bankers.

Where larger trade groups might buy a dozen tickets for a fund-raising event and send two or three representatives, he said, "we buy one ticket and one of our staff goes. So I think that gives us good visibility for what we spend."

According to Common Cause, finance PACs – representing banks, thrifts, and other financial institutions – gave $8.5 million during the six-year cycle. Insurance PACs gave $5.8 milion, and real estate and construction PACs contributed $4.9 million.

The insurance industry, not surprisingly, put Sen. Lloyd Bentsen, D-Tex., at the top of its list, with contributions of $213,900. Mr. Bentsen chairs the Senate Finance Committee.

Sen. Phil Gramm, R-Tex., a member of the Senate Banking Committee, led the pack among recipients of dollars from real estate and construction PACs, with a total take of $193,875.

— Robert M. Garsson

Number of Credit Unions Shrinks as Profits Drop Sharply

Continued from *page* **1**

they should have their tax-exempt status revoked.

The biggest credit union – Merrifield, Va.-based Navy Federal Credit Union – had $3.9 billion in assets at yearend, about the same as the 139th-largest commercial bank. Five credit unions had more than $1 billion in assets, two more than at yearend 1988, and the portion of industry assets controlled by the top 100 rose by a percentage point in 1989, to 23%.

Trend Held Durable

The consolidation has been apparent for several years, and industry observers expect it to continue. John T. Roycroft, a vice president at Washington-based Callahan, said he expected to see only about 12,000 surviving credit unions by 1995.

"The trend has been pretty solid for years now, and it is not particularly bad," Mr. Roycroft said. Mr. Roycroft said another reason the number of credit unions will continue to fall is that fewer are being chartered in a less hospitable regulatory climate. The ABA and other banking lobbyists have warned that credit unions could become "the next thrift crisis" – a charge that credit union regulators and trade groups vehemently deny.

> **'The whole regulatory atmosphere has become combative under the fear of another financial crisis.'**
>
> **John T. Roycroft**
> *Callahan & Associates*

Rough Atmosphere Noted

"The whole regulatory atmosphere has become combative under the fear of another financial crisis," Mr. Roycroft said.

In that light, credit unions have shifted their emphasis from growth to capital. The impetus for the slowdown has come, in part, from the federal regulator, the National Credit Union Administration.

Credit union observers say the slower growth will insulate their industry from the bankers' anti-credit union campaign.

Assets for all credit unions last year grew just 2.42% – well below the top 100's 7% – while capital increased 13.21%. The asset gain of the top 100 was the smallest since the 6% of 1981

Some Big Gains

Assets rocketed at several credit unions. San Diego, Calif.-based Mission Federal Credit Union's assets jumped 26% to $411.2 million; Reynolds Carolina Credit Union of Winston-Salem, N.C., 24% to $303.8 million; and Security Service Federal Credit Union of San Antonio, Tex., 23% to $557.1 million.

There were big decliners, too. Assets at American First Federal Credit Union, La Habra, Calif., dove 48% to $228.3 million.

American was followed by Eastern Financial Federal Credit Union of Miami, where assets dipped 14.58% to $729.9 million. Eastern Financial Federal was organized originally to serve employees of Eastern Airlines, which has gone bankrupt.

Capital Strengthened

Capital rose more than twice as fast as assets at the top 100. TRW Systems Federal, Manhattan Beach, Calif., led the way with a jump of 45% to $19.6 million, raising its capital-to-assets ratio 224 basis points, to 8.03%

TRW Systems was followed by Lockheed Federal Credit Union, Burbank, Calif., with a 44% rise to $41.8 million, and a 176 basis-points increase in the ratio to 7.47%.

Alaska USA Federal Credit Union, Anchorage, however, saw its capital fall 29.29% to $14.2 million. The institution's ratio at yearend was 1.61%, compared with a ratio of 2.43% the year before.

Only one of the top 100 reported negative capital: San Antonio Federal Credit Union, Tex., with a negative $19.6 million last year, compared with negative $21.1 million at yearend 1988.

Melrose Credit Union, Woodside, N.Y., had the best capital ratio, 19.18%, with capital of $48.3 million and assets of $251.7 million at yearend. It was followed by 12th-ranked Orange County Teachers Federal, Santa Ana, Calif. with a ratio of 13.61%.

San Antonio Federal had a the worst capital ratio – negative 3.57%.

Net Income Declines

Net income was down 35% for the industry and almost 40% for the top 100, most likely due to an emphasis on building reserves.

Among the top 100, 14 lost money last year and two reported zero income, compared with two that lost money in 1988 and 11 reporting zero income.

Zero net income indicates that all net income has been transferred to statutory reserves, a component of capital.

The biggest money losers included Alaska Federal, which lost $18.8 million; Finance Center Federal Credit Union, Indianapolis, $10.7 million; and Eastern Financial, $7.7 million.

Membership at the top 100 was up 5.6%, while membership for all credit unions was up 3.93% to $58.48 million, from 56.27 million in 1988.

San Antonio Federal had the largest gain in membership, 73.8% to 234,953. The Central Intelligence Agency, Northwest Federal Credit Union of Herndon, Va., had the largest decline with its membership falling 89.7% to 10,001. □

Lenient View Of Owning Bank Gains Support

By YVETTE D. KANTROW

ANALYSIS: *Follow-up on the news*

NEW YORK — Samuel J. Baptista, president of the Financial Services Council, remembers the time three years ago when people hooted at him as a Don Quixote for suggesting that just about anybody should be able to own a bank. Now, he maintains, such an idea is no longer so far-fetched and is, in fact, gaining momentum in Washington.

Indeed, Mr. Baptista's proposal serves as the cornerstone of the Depository Institution Affiliation Act, a bill introduced by Rep. Doug Barnard, D-Ga., last spring. But whether it will be the ultimate answer to such a complex question as the restructuring of the financial services industry is by no means certain. Many other bills are in the development stages and have yet to be heard from.

Rep. Barnard's bill would allow banks, insurance companies, securities brokers, and all other commercial companies to enter one another's businesses.

At the least, it has the attention of all the constituent groups affected. And, as Mr. Baptista boasts, it has focused the issue on restructuring the financial services industry as a whole, rather than on the more limited issue of additional powers of banks, which had been the debate for years.

Battle for Position

"There's a growing desire to want to do something major instead of just something around the edges," said Edward L. Yingling, executive director of the American Bankers Association. But while they favor a major industry restructuring, most banking groups are unwilling to cross a line that would allow industrial and commercial companies to own banks.

Indeed, the jockeying for position has just begun. Trade associations, regulators, and the Bush administration are all busy preparing trial balloons, taking positions, and forming alliances, in the hope of protecting their interests when the country's financial services industry undergoes an overhaul.

. "This is a year of groundwork laying," said Joe Belew, president of the Consumer Bankers Association. "Everyone is spending their time building their cases so they have a strategy next January. It's going to be quite a show."

While it is unlikely that Con-

Too Much Pressure on Thrifts?
Under the bailout law for the savings and loan industry...
Capital rules are more stringent, and deposit insurance premiums have increased...
But investment options are limited, and Federal Home Loan bank dividends have been slashed.

Thrift Law, Restricting S&L Loans To Low Margins, Impedes Rescue

By PHIL ROOSEVELT

THRIFTS: *The Crisis Worsens*

Second in a series

NEW YORK — The massive effort to rescue the thrift industry is being hobbled by the very law that set it in motion.

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 was designed to guide the largest-ever federal rescue and prevent another crisis. But a growing number of experts say that provisions in the law also created one of the cleanup's biggest obstacles: a fundamental reduction in the profit potential of thrifts.

Now, scores of marginal S&Ls that otherwise might have improved are headed toward failure, industry executives and analysts say. And investors are showing little interest in the government's burgeoning warehouse of seized thrifts.

"At a time when the government is trying to attract capital to the industry, they've done about everything they can to decrease investor interest in thrifts," asserts Thomas J. Owen, chief executive of Perpetual Savings Bank, a $6.3 billion-asset thrift based in Vienna, Va.

Mr. Owen and others say the law has reduced the appeal of thrifts by:

- Requiring thrifts to increase

Allied Irish Bids for U.S. Bank, Gets Chilly Reply

By JOHN EVANS

LONDON — An unsolicited offer Monday by the U.S. unit of Allied Irish Banks PLC to acquire Baltimore Bancorp. may turn into the first hostile attempt by a foreign bank to acquire a U.S. banking company.

The $17-a-share offer by First Maryland Bancorp was pitched at a hefty 66% premium above Baltimore Bancorp.'s closing price Friday. Dublin-based Allied Irish maintained that the $217 million cash bid, though unsolicited, was "friendly."

A Bitter Reaction

Baltimore Bancorp. reacted bitterly to the unsolicited offer, saying the way it was revealed created "a hostile atmosphere." Allied Irish said its offer remains on the table despite the Maryland company's response.

Baltimore Bancorp.'s stock rallied on news of the bid. Its shares traded at $14.875 Monday afternoon, up $3.125 from Friday's close.

FDIC Extends Its Coverage Of '457' Plans

By BARBARA A. REHM

WASHINGTON — The Federal Deposit Insurance Corp. board voted unanimously Monday to extend for 21 months its insurance coverage on $4 billion in thrift deposits held by deferred-compensation plans.

The extension gives Congress until January 1992 to enact permanent insurance coverage for participants in those employee-benefit plans, known as "457" plans. Each member is currently insured up to $100,000, but the FDIC had proposed curtailing that coverage to limit its exposure to $100,000 per group plan.

It's Up to Congress

In its action Monday, the FDIC board left it up to Congress to keep the current policy in effect beyond next year.

The board also agreed to provide the $100,000 insurance to anyone who joins a 457 plan before October 1991. The FDIC staff wanted only to "grandfather" people already contributing as of July 29, 1990, but was overruled by Chairman L. Wil-

Chase Sets Clearing-House Record With Over 100 Million Transactions

By JEFFREY KUTLER

NEW YORK — Continuing its supremacy in the automated clearing house business, Chase Manhattan Bank in 1989 became the first to initiate more than 100 million transactions through that paperless payment system.

The *American Banker*'s annual automated clearing house survey shows that Chase in 1989 originated 101.1 million debit and credit entries, or 12% of the 844 million ACH payments in the private sector. (The ranking of the top 100 appears on page 6.) Chase's volume equaled that of Nos. 2, 3, and 4 on the list combined, plus half that of No. 5.

Several other banks made impressive gains last year, though without cutting into Chase's lead. Chase's 28% growth in 1989 exceeded the 26% for private-sector ACH activity as a whole, which includes direct payroll deposits and consumer

COMMENT/*By Sanford Rose*

A Balanced Bank

The dominant industry view of Wells Fargo Bank is that of a high-flying lender and a penny-pinching cost controller. Fixated on the lush yields in the bank's book of leveraged buyout loans and on stories about CEO Carl Reichardt's parsimony, the average analyst tends to overlook the bank's strength as a funder.

That this neglect is unfortunate is clear from an analysis just done by the First Manhattan Consulting Group. The analysis reveals that most of Wells' earnings gain during the 1983-1988 period – relative, that is, to the average large bank – was traceable to a dramatic improvement in its funding position.

In 1983, Wells' pretax interest expenses per dollar of assets were 80 basis point higher than that of the average banking company among the top 250 in the country. That is, its interest expenses would have been this much higher had the bank operated with the same ratio of equity to assets as the typical top-250 bank.

By 1988, however, Wells' leverage-adjusted interest expenses were 40 basis points lower than the average. Other things being equal, this astonishing turnaround in pretax interest costs would have accounted for about a 12-percentage-point aftertax improvement in the bank's relative return on equity.

Significantly, although there was some improvement in interest expenses before Wells' 1986 acquisition of Crocker Bank, most of the gain occurred after. Crocker provided Wells with oodles of cheap money, helping the bank to raise the proportion of assets funded with core deposits from about 60% in the mid-'80s to around 70% in the late '80s. In fact, Crocker gave Wells so many rate-insensitive core monies that management, fearful of excess exposure to declining rates, found it necessary to buy a wad of long-term bonds, which, unhappily, have not performed especially well.

Wells' mix of funds is now much more attractive than that of the run-of-the-mill top-250 bank. To be sure, its hoard of demand deposits and NOWs is only marginally higher. But in 1988 it funded about 27% of its assets with money market deposit accounts, a figure some 7 percentage points above that of the typical top-250 bank. And, as is well known, MMDA rates in California have for the last few years been appreciably lower than the national average.

Because Wells has so many cheap MMDAs, it has little need of the more expensive jumbo CDs. In 1988, the proportion of its assets funded with jumbos amounted to 3.8 percentage points less than the large-bank norm.

Wells Fargo is without doubt a penny pincher.

The data also tend to belie Wells' reputation as a super-aggressive loan-yield generator and, by contrast, an indifferent producer of fee revenue. Some 30 basis points of commitment and other fees that were reported as interest income from 1983 through 1987 should more properly be classified as noninterest revenue, says First Manhattan Consulting. When this is done, the bank's relative yield advantage, of course, diminishes, while its relative fee position improves.

In 1988, Wells' gross interest income as a percent of assets was 20 basis points higher than the average of the 250 banks. But this was down from a 50-basis-point advantage held in 1985. In contrast, its ratio of fee income to assets was 35 basis points above average in 1988, whereas a few years earlier it had been 5 basis points below average.

In one respect at least, the conventional wisdom regarding Wells seems well-founded. The bank is without doubt a penny pincher. Once again, it went from being a below-average performer in 1983 to a position of manifest superiority in expense control. The bank's 1988 expenses as a percent of assets were 40 basis points lower than those recorded by the typical top-250 bank with a comparable business mix.

Cooking on All Cylinders

The picture that emerges from this brief analysis is that of a well-balanced bank. Bank earnings performance can be viewed as an engine powered by four cylinders: the asset yield, the liability yield, fee income, and expense productivity. According to First Manhattan Consulting, a bank with average power in each of these four cylinders can look forward to a return on equity of around 16%, which, given today's interest rates, is probably sufficient to elevate its stock price to a premium over book value.

Some banks, however, generate better-than-average power from one or more cylinders. And a very few institutions, like Wells, seem to be cooking on all cylinders. Such strongly balanced banks boast ROEs in the 20%-plus range.

First Manhattan Consulting identifies at least seven large banks that currently qualify as strongly balanced. Besides Wells, they are: Fifth Third of Ohio, CoreStates, Banc One, Indiana National, SunTrust, and Sovran. □

CRIME BLOTTER/*By Tom Leander*

Thift Fraud Ranked On Top Crimes List

U.S. Attorney General Dick Thornburgh listed thrift fraud among seven major types of white-collar crime in this country, estimating last week that up to 30% of S&L failures can be attributed to criminals.

Dick Thornburgh

"Twenty-five to 30%, conservatively, of these 'thrift failures' can be laid to actual wrongdoing by miscreant bank officials," the head of the Justice Department said in a address to the Dallas Friday Group, an organization of senior executives and government relations officers in Dallas-area businesses. Mr. Thornburgh praised the Dallas Bank Fraud Task Force for its role in obtaining 66 indictments and 49 convictions.

After his speech, the nation's top prosecutor said he sees little hope of making any substantial recovery of money looted from the thrifts.

"Those who prosecuted these crimes are pessimistic to effect any substantial recovery.

"Some of them have dissipated, some are beyond our reach, and a lot of them are collaterals which were vastly overvalued. I have said at the outset that we have to be realistic about recovery," he said.

Tellers to Watch Out For Bilking of Elderly

Illinois Attorney General Neil Hartigan is enlisting the aid of bank tellers to help prevent fraud against the elderly.

Beginning June 1, officials from Mr. Hartigan's office will instruct tellers and police officers in ways to derail confidence schemes aimed at separating the elderly from their money. The Senior Cash Alert Monitoring System, or Scam, was announced last week by Mr. Hartigan.

If tellers think they are witnessing a fraud, they will be instructed to activate a surveillance camera and inform bank executives and the police, according to Ernest Slottag, a spokesman for the Illinois attorney general's office.

Many fraudulent schemes to victimize the elderly are perpetrated through banks, Mr. Slottag said. In one common example, he said, a confidence man – posing as a banker – approaches a senior citizen. He asks the senior citizen to withdraw all the cash from his or her account and hand it over.

The confidence man says the withdrawal is necessary to monitor the bank's record-keeping efficiency. He promises to return the money the next day.

Tellers will be taught to watch for any unusual signs when senior citizens withdraw large sums from their accounts.

The effort is supported by the Illinois Bankers Association, the Community Bankers Association of Illinois, Illinois League of Savings Institutions, and the Illinois Credit Union League.

Conterfeiting Case Nets 3 Indictments

A federal grand jury has indicted two men from Canada and one from Oregon on 29 counts involving $4.7 million in counterfeit U.S. Treasury checks.

Harvey To-Kong Wong, 41, and Siu-San Lam, 30, both of Vancouver, British Columbia, and Michael Busher, 38, of West Linn, Ore., were arrested in Everett, Wash, in early March, when they attempted to cash a counterfeit Treasury check for more than $1.47 million.

They are charged with money laundering and conspiracy to deliver and pass bogus Treasury checks, U.S. Attorney Mike McKay said. The three allegedly passed eight counterfeit U.S. Treasury checks totaling $14.5 million at a Vancouver, Wash., branch of Seattle-First National Bank, according to Mr. McKay.

In its quarterly report, Seattle First said it had set aside a $5 million reserve in connection with deposits of counterfeit government checks. The checks were counterfeited in Hong Kong and sent to British Columbia, then brought to the United States to be cashed, according to the indictment.

The operation was uncovered in January when Mr. Wong and Mr. Lam contacted a man in Vancouver, B.C., and asked him to cash counterfeit checks. The man notified Canadian authorities, who called the FBI.

All three suspects were in custody in the Puget Sound area, said John Carver, assistant U.S. attorney. The scheme resulted in a loss of about $4.7 million, Mr. Carver said.

Legal Onslaught Proceeds Against Texas Bank Fraud

In a continuing crackdown on bank and thrift fraud in south Texas, the U.S. attorney's office in San Antonio released a dozen indictments last week charging employees and customers of nine banks and thrifts with fraud and embezzlement.

All 12 indictments were for unrelated cases, prosecutors said. The indictments alleged crimes against Frost National Bank, NCNB Texas National Bank, the San Antonio Federal Credit Union, San Antonio Savings Association, Gil Savings Association, La Hacienda Savings Association, Medcentre Bank, and Union Bank, all in San Antonio. One indictment involved Mason National Bank in Mason, Tex.

According to U.S. Attorney Ronald Ederer, the alleged crimes involved sums ranging from $100 to $400,000. Investigations by the U.S. attorney's office in San Antonio have resulted in about 100 indictments of bank and thrift crimes. □

and corporate bill payments.

"They are a real success story," said an executive at a competing bank in the Northeast. "They've made the ACH business their own, and the rest of us are left fighting for a limited piece of the pie."

"We like to think we are pretty successful in our markets, but every year our realistic goal has only been second place," conceded Carol Daniels, ACH product manager at Norwest Bank Minneapolis, which matched Chase's 28% growth last year and ranked fourth in payments sent into the ACH system.

Small Regional Is No. 1

Most notable among the other gainers was Marine Bank of Springfield, Ill. Its $1 billion in assets may be dwarfed by the nation's largest banks, but its commitment to the ACH business is not: Last year it vaulted past Norwest and Bank of America to rank second only to Chase in total originations.

Marine Bank's 31.3 million items exceeded Bank of America's by 1.1 million and Norwest's by 2.4 million, and its 38% growth rate was the best in the top 10, except for NCNB Texas National Bank's 47%, which lifted the NCNB Corp. unit to No. 10 from No. 16 the year before.

Two other Texas banks – First City Bancorp.'s Houston affiliate and Texas Commerce Bank, the Houston outpost of Chemical Banking Corp. – doubled their clearing house volumes last year, in part due to consolidation of the operations of affiliates. Each now ranks among the 25 largest ACH originators, but below the top 50 according to deposit size.

They are among many banks that perform in the ACH business out of proportion to their size: No. 4 Norwest ranks 67th by deposits; No. 5 Northern Trust Co., Chicago, is 76th; No. 7 First National Bank of Atlanta is 57th. The Atlanta bank's ACH volume exceeds that of its First Wachovia Corp. sibling, Wachovia Bank & Trust Co., which is the 23d-largest bank.

The $150 million-asset Central National Bank of Waco, Tex., became the smallest institution to make the top 100 in the five years that the *American Banker* has been compiling it. The Texas bank ranked 44th in 1989, with almost four million ACH items, as new management introduced practices they learned at larger banks where they previously worked.

A Start in Insurance

Even as banks of all sizes accelerated their promotions of payment services that were mired in slow growth until a few years ago, the flagship of Chase Manhattan Corp. kept the stranglehold on the top spot it has held since the formation of the national payment network in the mid-1970s.

As has been true since the beginning, the vast majority of Chase's items are debits such as insurance-premium payments. On an agreed-upon schedule, the bank automatically moves money from a policyholder's checking account to an insurer's account, eliminating the need for a paper check or draft.

The life insurance industry has been the source of most of the debit volume that brought other banks well up on the ACH-originations list – including Marine Bank, Norwest, and Central National of Waco – but Chase remains in a class by itself.

Chase's dominance was already pronounced by 1984, the year of the first *American Banker* survey of the paperless payment system, when Chase's 41.2 million transactions exceeded runner-up Bank of America's by a factor of four.

By 1988, the New York bank's margin had shrunk to 3.26 times the volume of its closest competitor, which again was BankAmerica Corp.'s Bank of America. In 1989, as Bank of America slipped from second to third with a 17% growth rate, Marine Bank edged into the No. 2 spot. But Chase widened its margin over the runner-up to a factor of 3.24.

No Gloating at Chase

Chase was reeling from a 16% growth rate in 1988, which was 11 percentage points less than the gain in all banks' originations that year, according to aggregate data from the National Automated Clearing House Association. The association also said that of 1.3 billion ACH payments last year, 844 million were in the private sector, and 487 were federal government payments like Social Security disbursements.

James J. Hopes, a Chase vice president, said the bank entered 1989 resolved to do better, and no single company or market inroad brought its growth back above the private-sector norm of 26%.

"We're trying harder; we'd like to get more than our share," said Mr. Hopes, who is also president of Chase ACH Inc., the only automated clearing house in the country operated for a single banking organization.

"The insurance-debit field is still growing," he added. "We have not tapped into the whole property-casualty area, and we expect to see significant new growth there."

POS Volume Lagging

Chase is also poised to take advantage of transactions initiated at retail points of sale, where several large merchants, including Exxon Co. USA and Mobil Oil Corp., allow customers to pay with debit cards and have the funds transferred within a day or two via the automated clearing house. ACH marketers tout this system as less costly than the more immediate, online electronic networks operated by regional automated teller machine cooperatives, but consumer usage has been meager except in Arizona and California.

The major Arizona banks, in a system called the Cactus Switch, have built their consumer transaction network around the automated clearing house rather than an on-line system like Interlink, which dominates the California POS market.

"We are doing one million POS debits a month, and when you consider there are only three

See **NORWEST** *next page*

Norwest and Illinois' Marine Made Gains in 1989 ACH Transactions

Continued from *page* **6**

million people in the state, that's pretty phenomenal," said Paul W. Finch, president of the Arizona Clearing House Association. The largest ACH originator there, Valley National Bank, ranked 36th on the 1989 *American Banker* list with 5.2 million transactions.

"We know of some service stations that are doing 50% of their transactions in ACH debits," Mr. Finch said. "Some supermarkets do 10% of their volume on debit cards on peak days, and that compares with only 20% [on] checks."

Elsewhere, "POS has not made a significant dent in ACH volume – yet," said Mr. Hopes of Chase. "We are hoping some POS tests we are in will show up in this year's volume. We see supermarkets coming along faster than oil companies because it is an easier sell. They can advertise debit as an electronic check, and people use checks at supermarkets all the time."

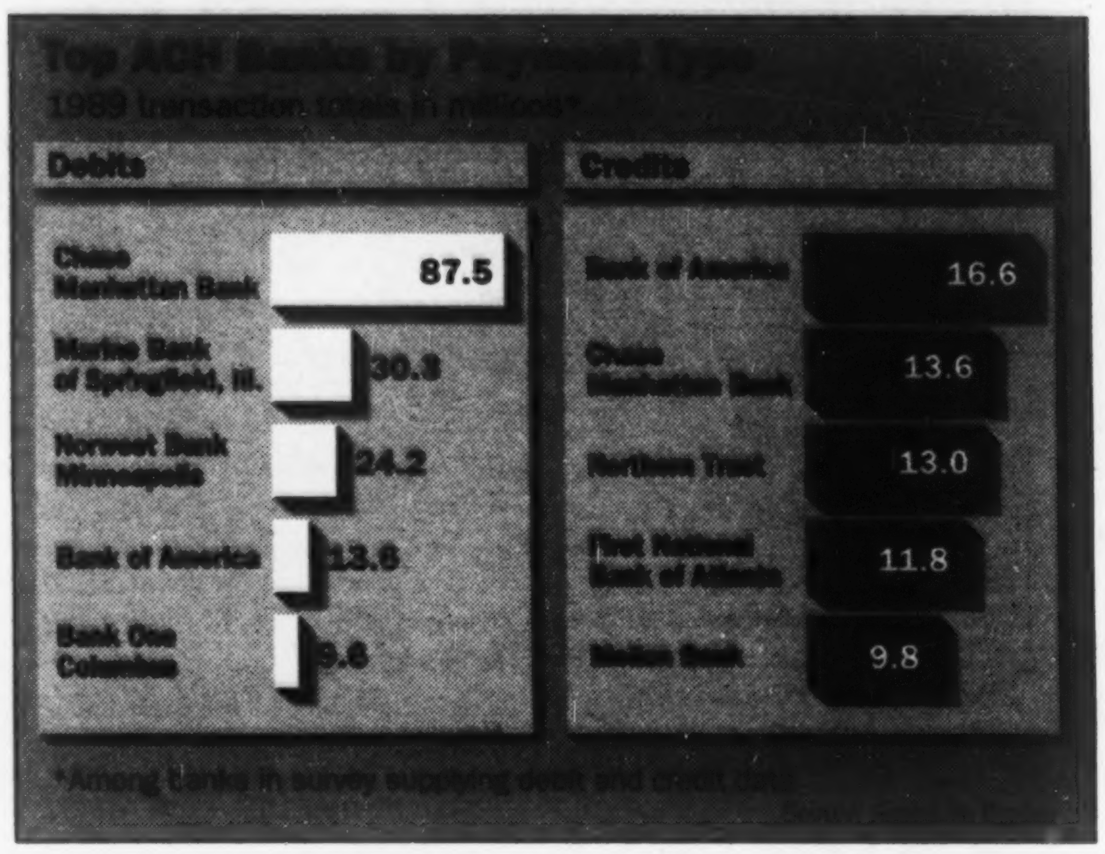
Shuffling Customers

While banks wait for several new payment types to materialize – including point-of-sale transactions and corporate trade payments associated with electronic data interchange systems – the ACH stakes remain highest where the volumes are greatest, in insurance-company debits and direct-payroll credits.

Marine Bank of Springfield, which hovered around the No. 4 and No. 5 rank for four years, jumped to No. 2 in 1989 on the strength of an increase in the number of insurance companies it serves, to 51 from 38 a year earlier. The insurance-debit specialist's biggest coup was the signing of Northwestern Mutual Life Insurance Co., Milwaukee, which Marine lured away from M&I Marshall & Ilsley Bank, also of Milwaukee. The M&I Corp. unit dropped six places to No. 17 as a result.

The task of absorbing Northwestern Mutual's considerable business forced Marine to curtail marketing efforts for six months last year, but now it is back on the growth track, said Robert J. DalSanto, vice presi-

See **CHASE** *page* **11**



Another View Of the Data

The leaders in the automated clearing house system would rank somewhat differently if the activity of holding companies were consolidated.

But because of Chase Manhattan Bank's dominance, Chase Manhattan Corp. would rank No. 1 among holding companies, too. The 3.6 million ACH transactions of its affiliate, Chase Lincoln First Bank, Rochester, N.Y., would give it an unneeded boost to 104.7 million.

Norwest Corp., Minneapolis, would rank second. Its three affiliates among the top 100 initiated 36.6 million payments last year.

Two BankAmerica Units

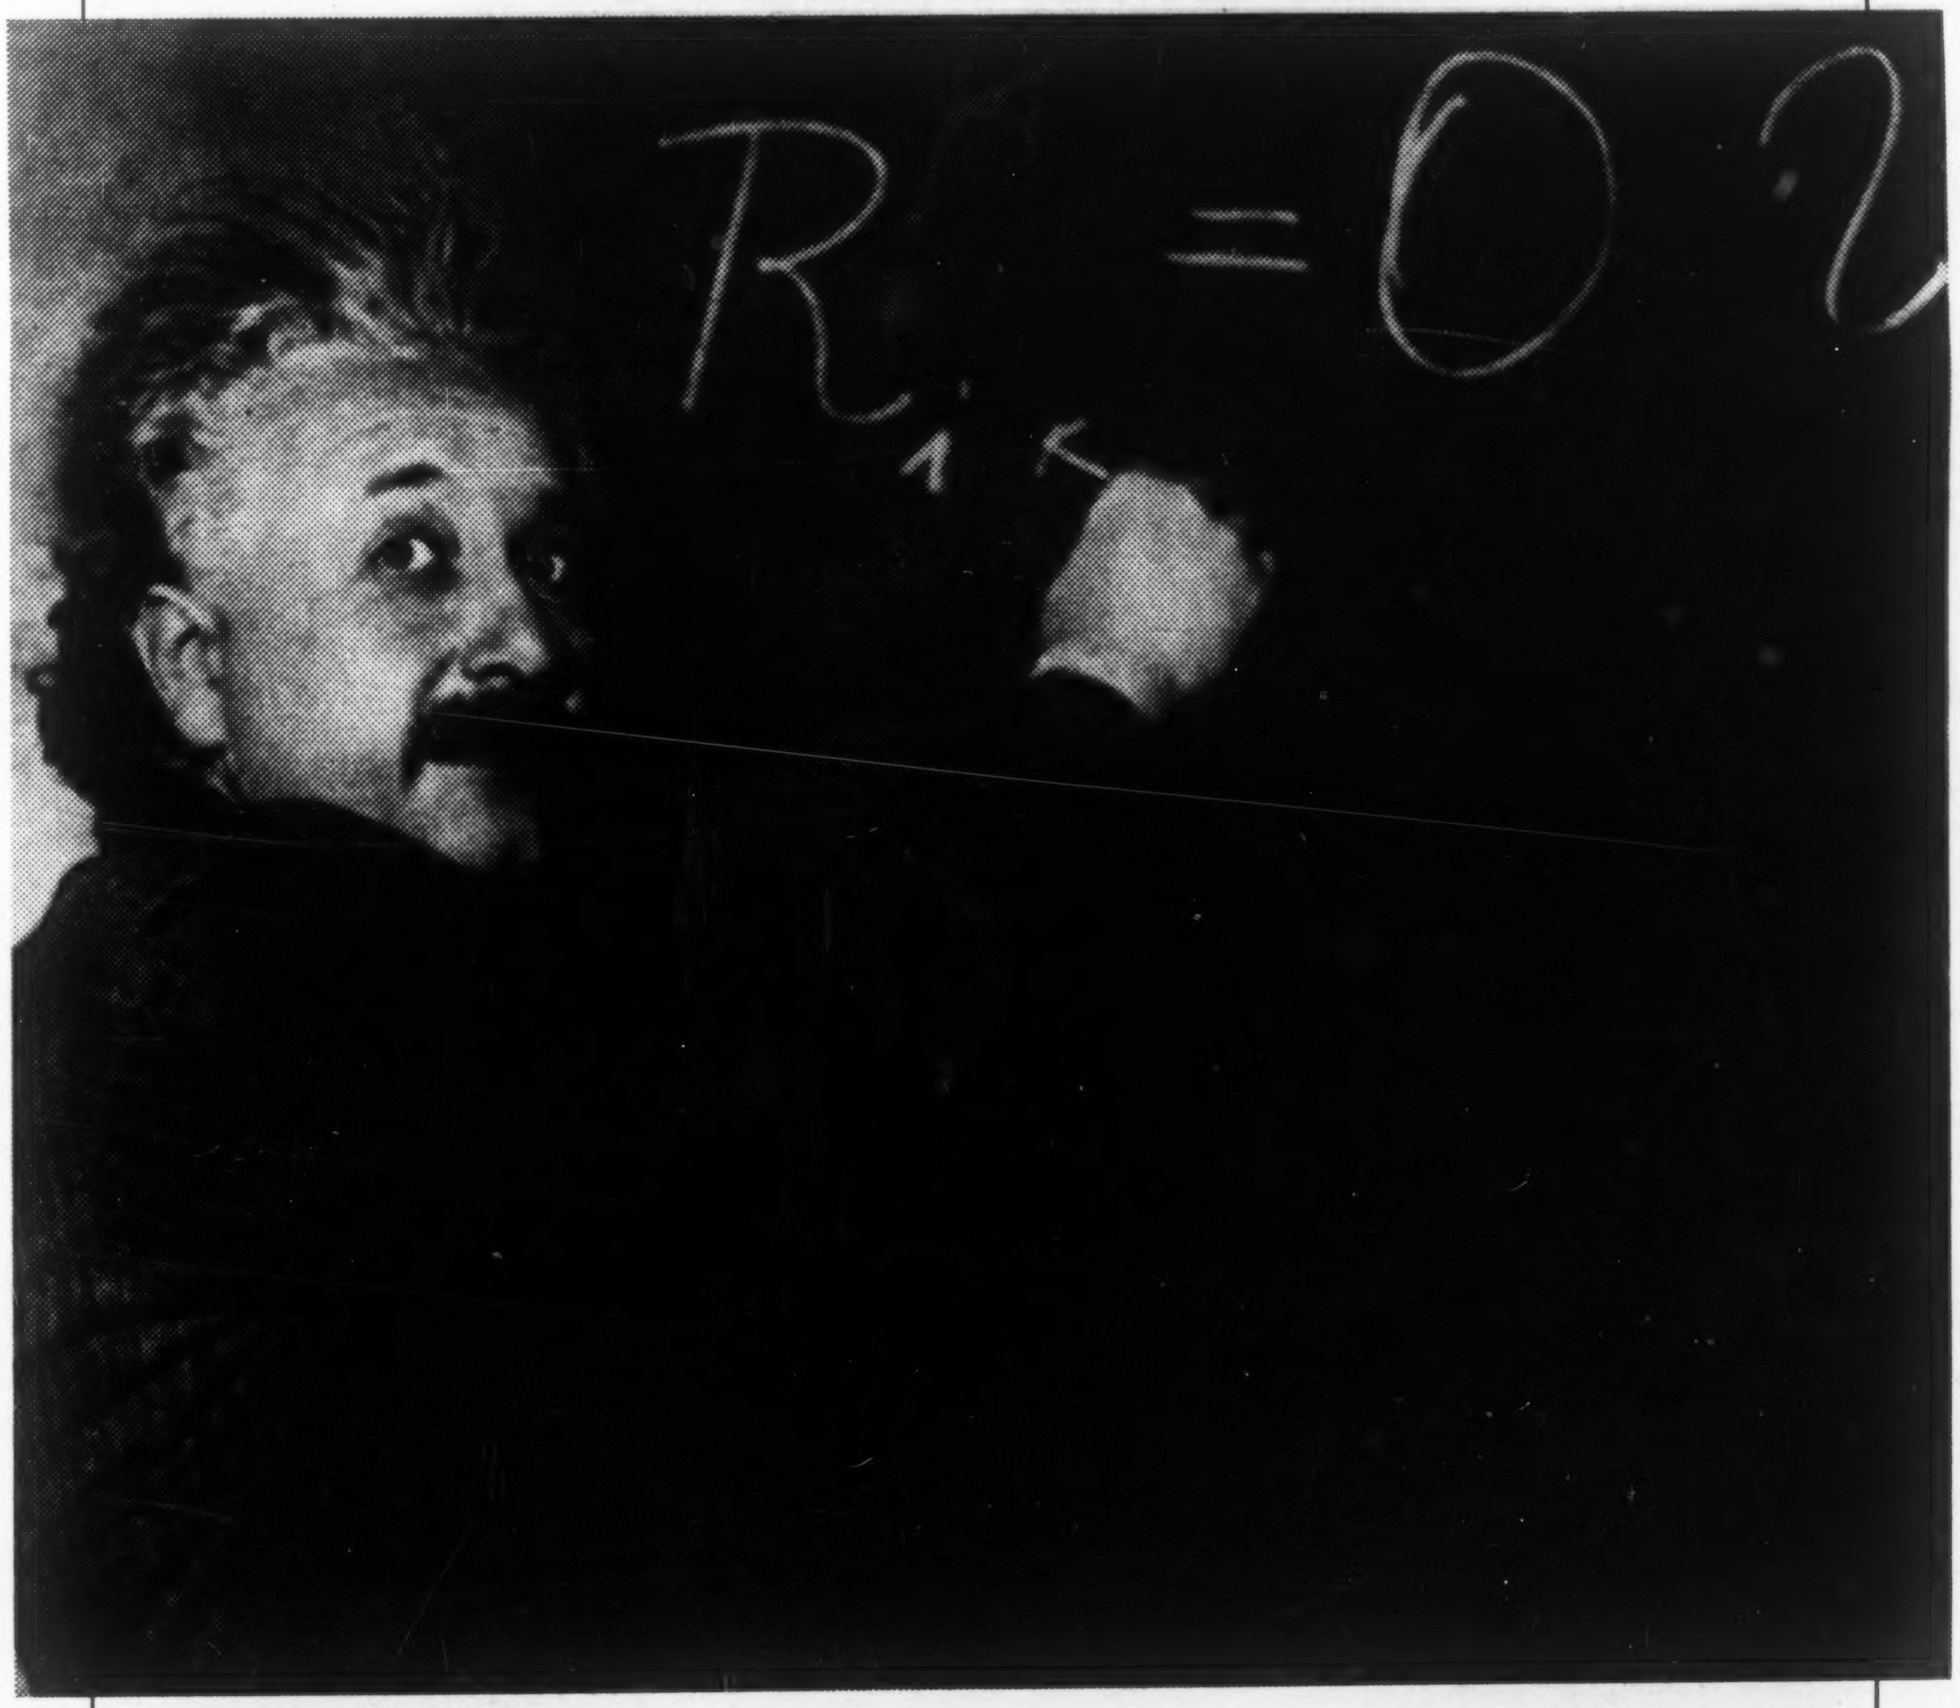
BankAmerica Corp.'s Bank of America and Seattle-First National Bank would come next, with 36.6 million. The 31.3 million originations of Marine Bank of Springfield, Ill., would place its parent, Marine Corp., fourth.

Other holding companies, most with multiple banks active in the ACH system, would follow in this order: First Wachovia Corp. (23.8 million items), Banc One Corp. (20.5 million), Northern Trust Corp. (19.3 million), First Interstate Bancorp (18.5 million), Mellon Bank Corp. (17.9 million), NCNB Corp. (16.3 million), Chemical Banking Corp. (15.3 million), Shawmut Corp. (14.2 million), Security Pacific Corp. (12.2 million), and Bank of Boston Corp. (10.9 million).

But the ACH network remains decentralized, with each member of multibank holding companies entering payments into its own local or regional clearing house. Since most data for the *American Banker* survey come from the clearing houses, banks are listed individually in the top 100 table. (There are minor exceptions, such as No. 24 CoreStates Financial Corp., which has consolidated ACH operations in one place.)

— Jeffrey Kutler

When no formula fits,
you have to know how to create your own.
It's the same in thrift M&A.



By thinking beyond existing formulas, Einstein was able to find solutions where no one else could. The same holds true for Merrill Lynch in thrift M&A.

We start with ideas. How to solve asset problems, help raise capital, or design a unique strategy. Then we apply our creativity to tailoring a structure to your specific needs.

Of course, creativity isn't the only ingredient of our success. We have years of experience serving thrifts. And as the leader in thrift M&A today, we're on top of industry trends and developments.

In addition, as a global firm we bring extraordinary resources to the task, including the ability to provide capital if necessary.

For creativity and expertise in arranging your thrift merger or acquisition, come to Merrill Lynch. Because we structure deals from ideas, not formulas.

Merrill Lynch
A tradition of trust.

CREDIT UNIONS

Regulators Say Their Rx Is Proving to Be the Cure

By BILL ATKINSON

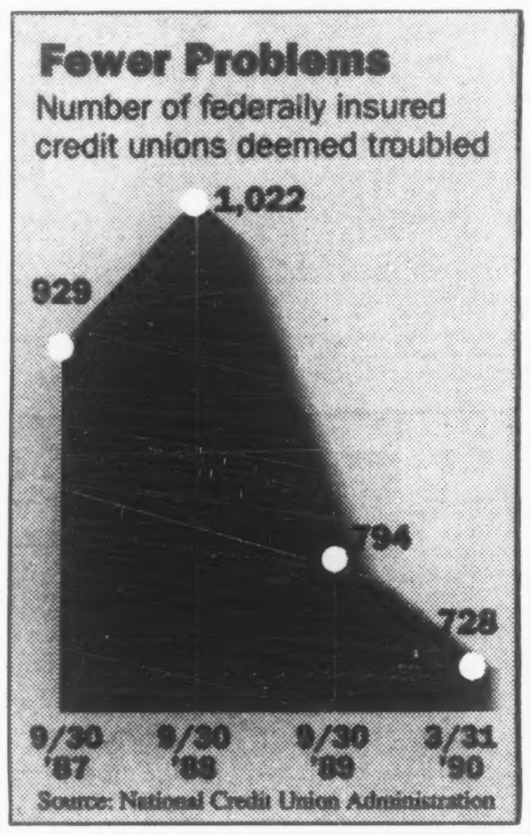
WASHINGTON — The National Credit Union Administration is finding that a heavy dose of regulatory medicine can work wonders for sick credit unions.

Since September 1988, the NCUA has designated a team of examiners to put insolvent credit unions or those headed for insolvency into an intensive-care program.

Sign a Letter of Agreement

Under the program, the regulatory agency requires management to sign a letter of agreement outlining the institution's problems and detailing how they will be cured. Thereafter, examiners visit the institution quarterly – and expect to see improvement with a year.

The effort paying off. The number of federally insured credit unions in trouble declined to 728 in March, from 1,022 when the program began.



Fewer Problems
Number of federally insured credit unions deemed troubled

Source: National Credit Union Administration

The aggressive handling of troubled credit unions may be partly responsible for the slight rise in failures last year. Credit-union failures have generally been declining since 1981, when 349 collapsed. But in 1989 failures rose to 114, from 85 in 1988.

"The percentage of credit unions that have improved is much greater than the number of credit unions that have failed," said Robert E. Loftus, director of public and congressional affairs for the credit-union regulator. Since the program's inception, about 70% of the troubled institutions have improved their ratings and the remaining 30% have been merged or liquidated, Mr. Loftus said.

"We think [the program] has been a big success," he said. "What is important here is taking care of problems before they become overwhelming."

The NCUA is trying to make sure it steers clear of any crisis comparable to that of the S&L industry – a crisis that would call into question its ability to insure and regulate credit unions.

John T. Roycroft, vice president of Washington-based Callahan and Associates, a credit-union consulting and publishing firm, acknowledges that making sure credit unions are healthy is a good way to fight off challenges from bankers and others. As not-for-profit institutions, credit unions are exempt from paying tax on their income, a sore point with bankers.

"Credit unions have their own interest in keeping safe," Mr. Roycroft said. "Credit unions never have and hopefully never will go to the federal trough to find themselves rescued."

Credit Unions Rated on a Scale of 1 to 5

Like bank examiners, NCUA field agents rate credit unions on their credit, assets, management, equity, and liquidity. The ratings are from 1 to 5; 1 is best.

The 580 examiners on the NCUA staff look at each of the 14,000 federally insured credit unions at least once a year. Bank examiners concentrate on unhealthy institutions, and may not visit healthy ones annually.

If a credit union receives a rating of 4, the examiners take immediate action by requiring management to sign the letter of agreement.

> **'What we have done . . . is put our resources where we have to.'**
>
> **Gerard M. McClernon**
> *National Credit Union Administration*

When a rating slips to a 4, the institution is "going to get tremendous supervision," said Gerard M. McClernon, NCUA's director of risk management "What we have done . . . is put our resources where we have to." Mr. McClernon is expected to be named this month as executive director of the agency.

Up to 10 Examiners Enter Institutions

How many examiners the NCUA sends into an institution depends on its size; it may be just one or as many as 10. If the problems are large and complex, examiners from the NCUA's special-actions division are dispatched. The agency has six special-action teams always on call, Mr. McClernon said.

The examiners look at the expense ratio, problem loans, cost of funds, yield on assets, and operating expenses.

Typically, credit unions that sign the agreement don't have capital, or their capital is declining fast. If a credit union receives a 5 rating, it usually is merged into another institution or liquidated.

"Once the problem is recognized, it doesn't take very long," Mr. McClernon said. "It sounds like pie in the sky, but it works." □

Northeast Marketing Data Grow

Two Companies Offer Extensive Reports to Banks

By ELLEN MEMMELAAR

NEW YORK — In response to a highly competitive environment in the Northeast, two companies that sell marketing-oriented data bases are gearing up to help banks increase their market share at low cost.

The possibility of increased competition looms particularly heavy in Connecticut, which is opening its borders to banks from other states.

But sagging real estate prices, increased out-of-state competition, and an already cut-throat environment are forcing financial institutions throughout New England to seek low-cost ways to sharpen their marketing strategies.

Cost Said to Be Low

Smith & Co., a Connecticut market research company, is targeting these institutions with a data base that it says provides information on consumers at one-fifth the cost of its competitors. The service, called New England Databank, will deliver a quarterly report on consumer banking trends across Connecticut, Maine, Massachusetts, and New Hampshire.

Because the service is shared by many institutions, a 10-minute customer interview is sold for $5, against $25 for the same data on a proprietary basis, said Stephen Smith, president of the company bearing his name.

"I always tell our clients that Databank is like a party line. Everyone else is going to know your market share, so you may as well know it, too," he said.

Also citing the competitive nature of the New England market, Harte-Hanks Data Technologies is launching a marketing data base management system this month that will allow financial institutions to segment consumer lists by customer, branch, and product profitability.

Borders Are Opened

The fall of interstate banking barriers in Connecticut means banks from other states with reciprocal agreements can merge or acquire banks in the state. And out-of-state banks will be able to branch directly into Connecticut in February 1992.

While a weak New England real estate market is expected to deter some banks from entering Connectiuct, many New York banks are poised for action, said Mr. Smith. A financial institution such as Citicorp is almost certain to want to become a player, he said, increasing the already heavy competition.

The information on the New England Databank is broken out by towns, and it can be further sliced to reveal market share, advertising awareness, demographic profiles, media usage, and other statistics.

Interviews Are Extensive

The Databank is based on more than 50,000 consumer interviews conducted over the last four years. The file, which is given to participants on computer disc, is assembled from 6,500 telephone interviews each quarter.

The Harte-Hanks software package, called Profit, runs on the company's PC/CIS product and is designed to be used in tandem with its Predict software. Data can be accessed and analyzed directly from a personal computer.

Harte-Hanks, which was founded in 1968, counts half of the nation's top 100 largest commercial banks and thrift institutions among its clients. □

Chemical Bets on Neighborhood's Renewal

By ELLEN MEMMELAAR

NEW YORK — Sensing an opportunity in a neighborhood revitalization, Chemical Bank on Monday opened a branch in the Hell's Kitchen area of Manhattan.

The neighborhood received a shot in the arm from the giant real estate developer Zeckendorf Co., which built a 49-story office tower and a 39-story condominimum complex there.

After years of neglect, the area is on its way up, according to a spokesman for Chemical Bank.

Regentrification

"It is an ambitious undertaking by the Zeckendorf Co. which may well herald the regentrification of the middle West Side," said the bank spokesman. The advertising firm Ogilvy & Mather and a prominent law firm have moved into the office complex, which is said to be 90% leased. The condominiums are 65% full.

Chemical's office, at 49th Street and Ninth Avenue, will handle commercial and retail accounts. It is next to an electronic banking installation that was completed in March. The installation houses automated teller machines and customer information centers that print out statements, balance receipts, interest rates, monthly credit payments, and other information.

Free Movie Tickets

To promote the branch, Chemical is giving away movie tickets to customers who open a ChemPlus or a Select Banking account at the location. The tickets are good in the underground theater in the complex.

The unit of Chemical Banking Corp. recently agreed to purchase another Manhattan branch from Greater New York Savings Bank. The branch has $118 million in deposits. Chemical needs to obtain regulatory approval and conduct due dilligence before the sale can be completed. □

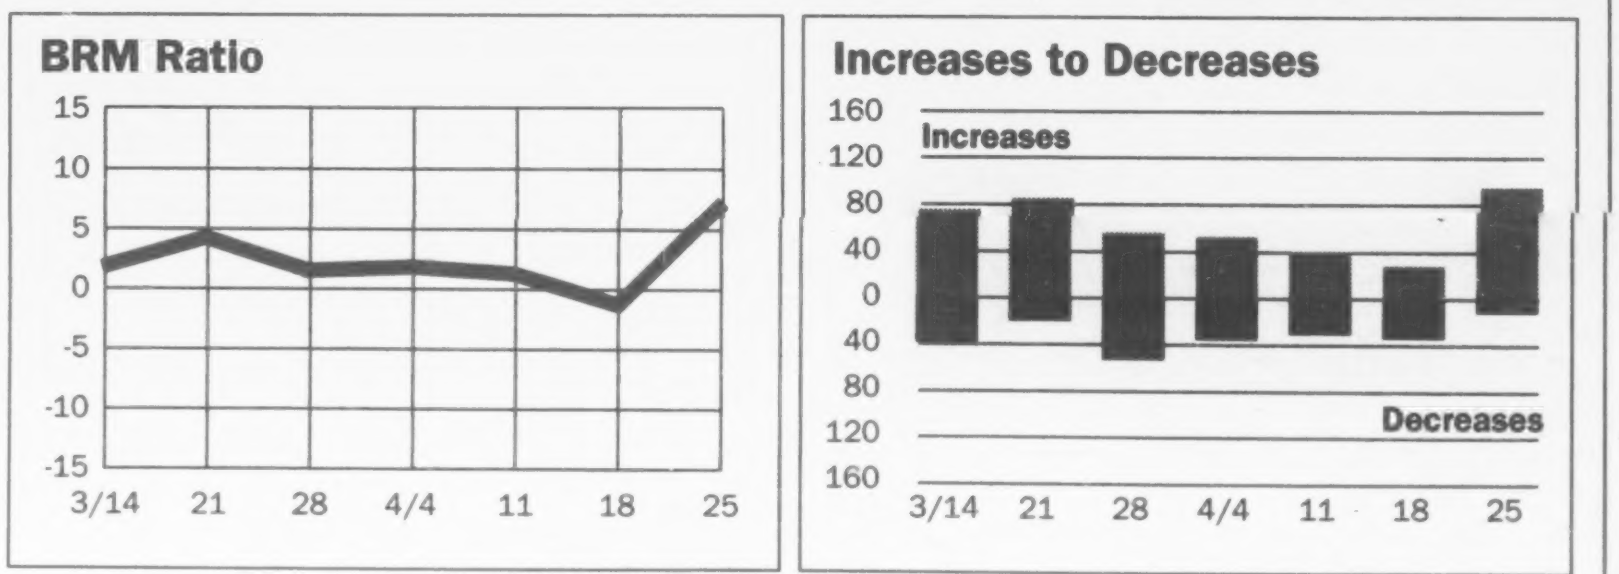
Consumer Money Index

Latest rate trend: Ratio shoots higher



BRM Ratio

Increases to Decreases

Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

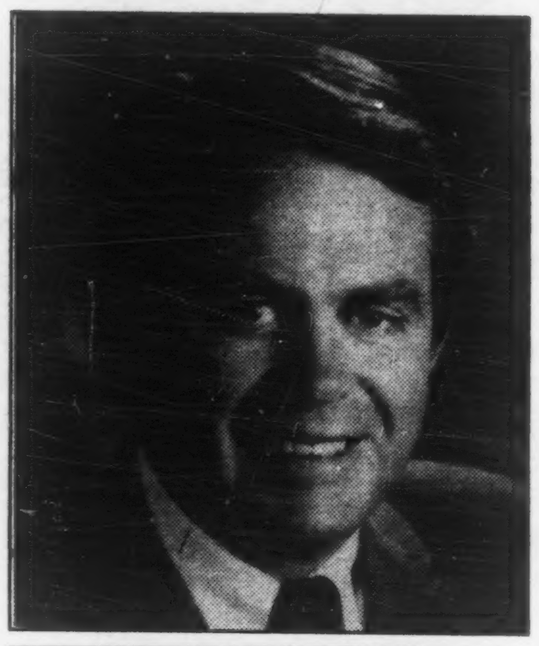
Small Bank Aims to Rule Technology Niche

By SAM ZUCKERMAN



'We want to dominate the lower end of the [technology] marketplace.'

Roger V. Smith
Silicon Valley Bank

SAN FRANCISCO — It's rare for a small bank to leap the continent to open a loan office. And it's even more unusual for such a bank to declare that it aims to become the national leader in a particular lending market.

But that is what $456 million-asset Silicon Valley Bank of Santa Clara, Calif., did last month when it announced plans to open a technology loan office near Boston.

'A Global Marketplace'

"We do not think the technology marketplace is a local marketplace," said Roger V. Smith, Silicon's president and chief executive. "It's a global marketplace."

This latest move by Mr. Smith, who has made Silicon one of the top performers in the country, represents much more than a simple effort to tap into the rich high-tech market in the Boston area.

To Open Orange County Office

"We want to dominate the lower end of the [technology] marketplace," said Harry W. Kellogg Jr., chief of Silicon's technology lending division. This summer, he said, in the bank's second foray outside the San Jose-Silicon Valley area, it will open a technology loan office in Orange County, Calif.

Mr. Smith founded Silicon in 1983, after 14 years with Wells Fargo Bank, including a stint as head of its technology lending unit. Since then, Silicon's assets have grown 13-fold while producing a 23% compound annual return to investors.

Last year the company posted an impressive 2.17% return on assets and a 28.4% return on equity while ranking consistently among banks its size as a national leader in productivity and cost control.

Known as Technology Lender

The bank's customers include small and middle-market businesses as well as local real estate developers. But Silicon, as its name suggests, is best known for its prowess as a technology lender.

With thorough knowledge of the technology business, an ability to tailor loan products, and special relationships with the venture capitalists who finance young companies, Silicon has become the dominant lender to maturing high-tech companies in Northern California.

Mr. Smith "is very aggressive," said a rival banker. "He goes after deals in an assertive way."

No Past-Due Loans in 1989

Silicon achieved its status while maintaining tough underwriting standards. In 1989 the bank had no nonperforming loans, no past-due loans, and no charge-offs in its technology portfolio.

Mr. Kellogg said, however, that a few credits were saved only after venture capitalists with stakes in the borrowers stepped in. "We dodged a few bullets," he acknowledged.

Some bankers are skeptical about Silicon's plan to venture so far from home. They suggest that the move could jeopardize the bank's sterling record for credit quality.

Beating the Odds

Small banks, they noted, often get burned outside their home markets because they don't know faraway borrowers and lack the controls to monitor a distant outpost.

"I would be very nervous," one banker said.

But analysts said Mr. Smith makes a strong case that Silicon may be the institution to beat the odds.

High-Technology Loans Only

"I don't think it has ever been done the way Silicon is doing it," said Murray G. Bodine, an investment banker with Hoefer & Arnett, San Francisco. "We needed to be convinced, but it's a natural extension of their existing business."

Mr. Smith stressed that the bank will make only technology loans. And long-distance technology lending, he argued, is less risky than long-distance real estate lending, for example.

Silicon's technique is to build relationships with the venture capitalists who provide start-up financing to technology companies.

"We know what we're doing in this marketplace," Mr. Smith said. "Many of the venture firms [that the bank deals with in the Silicon Valley] also invest in the Route 128 area," Boston's technology zone.

What persuaded Mr. Smith to open the Boston-area office, he said, was the availability of three members of the high-tech lending team at Bank of New England's after the troubled Massachusetts bank was forced to cut back credits.

The team includes Allyn C. Woodward Jr., group manager. Mr. Smith said he has known Mr. Woodward for years, ever since Silicon began selling loan participations to The Bank of New England.

"The guys they hired were the premiere tech lenders in New England," said Mark T. Boyer, an investment manager with Volpe, Covington & Welty, a San Francisco brokerage house.

Chase Was First In '89 ACH Deals

Continued from *page* **7**

dent for corporate cash management.

"Our May 1990 transaction volume will exceed 3.3 million items," he said. "We expect to process approximately 40 million debit transactions during 1990," which would yield a 28% increase for the year.

The originator among the top 100 with the biggest percentage gain, Deposit Guaranty National Bank, Jackson, Miss., rose 150% last year to 3.1 million items after converting the state's largest insurance company, Southern Farm Bureau Life Insurance Co., to a direct-debit premium system from paper drafts.

"We had a relationship with them, but [the ACH business] wasn't automatic," said John Fraiser, assistant vice president at the $4.5 billion-asset Deposit Guaranty. "Regional banks call on the company all the time. We were in direct competition with Wachovia on that contract."

Deposit Guaranty now faces a test: Can it hold onto a large customer with a service that can easily be switched to a competitor? ☐

German Banks Poised to Play Dominant Role

By JOHN EVANS

LONDON — The European Community is stimulating a merry-go-round of competition in financial services, and West Germany's biggest banks are in the best position to grab the brass rings.

Bankers and analysts say that Germany, which already has more big banks than any other country in Europe, has several advantages in developing the large banking conglomerates that many observers believe are destined to dominate financial services across the European Community.

On the front lines for this turf war are Germany's universal banks such as Deutsche Bank AG. Such institutions combine retail and wholesale banking, merchant banking, and related securities and investment functions.

ANALYSIS: *Follow-up on the news*

German bankers talk about evolving this powerful combination even further through the "allfinanz" bank, which will take on additional powers such as insurance, thereby establishing giants to provide virtually any financial service.

In addition, German banking can spread through the European Community from a highly protected home base, analysts say. Germany's tight-knit domestic financial services system makes the country almost as difficult to break into for foreign banks as Japan, which is frequently accused of running a closed shop as far as overseas financial companies are concerned.

States Control Banks

More than half of the German market consists of savings and regional banks, many of which are owned or controlled by the various states that make up the Federal Republic.

These institutions, with the backing of local governments and municipalities, dominate the nation's retail banking sector and make it virtually impossible for a foreigner to get a foothold, analysts say.

"I can't see foreign banks making much progress in trying to break into Germany's retail banking markets, although banks like Citicorp have built up a decent-size business," said Thomas Albrecht, an analyst with the brokerage firm UBS Phillips & Drew.

Citicorp's Frankfurt-based Kunden Kredit Bank unit, which operates some 700 con-

LATE NEWS

Delaware Set to Vote On Insurance Bill

The Delaware Senate was moving toward a vote late Thursday afternoon on legislation that would allow banks with operations in the state to underwrite and sell insurance nationwide.

Banking and insurance industry officials expected the the bill to pass. The measure has already cleared the House of Representatives. Lobbyists said Gov. Michael Castle has indicated that he would sign the legislation, which would significantly expand bank insurance powers.

First Fidelity Chops Payout As Its Credit Deteriorates

By GORDON MATTHEWS

NEW YORK — First Fidelity Bancorp. said Thursday that it is slashing its stock dividend nearly in half because of worsening credit quality that could send nonperforming assets up as much as 40% this quarter.

The annual dividend of the New Jersey superregional banking company was cut to $1.20 from $2 per share of common stock.

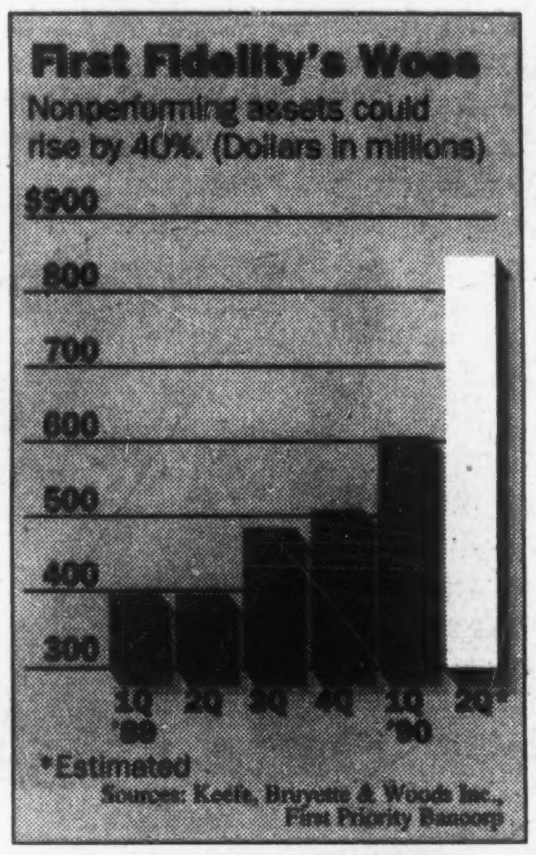
The move reflects "deterioration in the real estate market and a general softening of the regional economy, as well as a change in the regulatory environment," said Anthony P. Terracciano, First Fidelity's chairman and chief executive officer.

Dividend Brought 'In Line'

The dividend cut would "bring First Fidelity's payout ratio in line with its peers," Mr. Terracciano said, and would increase its ability to generate capital internally for future growth.

The news sent First Fidelity's stock soaring $1.875 a share, to $19.50 at the close on the New York Stock Exchange.

The surge surprised analysts. They speculated that investors believe the new management, under Mr. Terracciano, was moving aggressively to restructure the company and that its stock has hit its bottom.



Shares Were at a Low

Wednesday, the day before the announcement, First Fidelity's shares had hit a 52-week low of $17.625.

First Fidelity also announced Thursday that it had put up for sale both its Fidelcor Business Credit Corp., an asset-based lending company in New York, and Latimer & Buck Inc., its commercial mortgage banking firm in Philadelphia.

D.C. Bank Borrowing From Fed, Sources Say

By BILL ATKINSON

WASHINGTON — National Bank of Washington is borrowing from the Federal Reserve System's discount window because some banks are refusing to lend it overnight deposits, according to sources close to the troubled bank.

The principal subsidiary of the $2 billion-assetWashington Bancorp. is borrowing about $130 million daily, in part to cover $25.8 million in maturing, unsecured commercial paper on which five banks recently withdrew backup lines of credit, a source said.

A spokeswoman for Washington Bancorp. denied that sources of overnight interbank loans, known as federal funds, have dried up. But she declined to specify the amount of federal funds available. She also would not comment on the nature or amount of borrowings from the discount window, which is a short-term, backup source of liquidity. The Federal Reserve

S&L Asks to Exit The Home Loan Bank System

By BARBARA A. REHM

WASHINGTON — A $2 billion-asset thrift in Wisconsin is seeking to leave the Federal Home Loan Bank System, intensifying regulators' fears of a stampede out of the system by healthy thrifts.

Security Bank, Milwaukee, has become the second thrift to notify the Federal Housing Finance Board that it plans to withdraw from the Home Loan Bank System, which provides low-cost loans to members. (Some regulators are searching for ways to reduce the system's dependence on members' participation. See page 8.)

Security said it wants to redeem its $14 million of stock in the Federal Home Loan Bank of Chicago and seek a higher yield on the funds.

A Line at the Exit Door

The action follows a decision last fall by the $250 million-asset Wauwatosa Savings and Loan Association, also of Wisconsin, to withdraw from the Chicago Home Loan Bank. The Wauwa-

Many Thrifts Are Still on the Brink As Capital Strength Proves Elusive

By TERESA CARSON
and L. MICHAEL CACACE

Almost 40% of the country's 300 largest thrifts failed to meet minimum regulatory capital limits at the end of last year, an *American Banker* survey shows. Industry experts say this means the thrift industry is still a long way from returning to health.

"The rich will get richer and everyone is scheduled for euthanasia – with pain," said Richard T. Pratt, chairman of Merrill Lynch Mortgage Capital and a former chairman of the Federal Home Loan Bank Board.

The survey found that 239 of the top 300 thrifts at yearend 1989 were members of the Savings Association Insurance Fund (SAIF). Almost half of these institutions did not meet the regulatory minimum of 3% core capital to assets. In fact, 62 had negative core capital.

COMMENT/ By Michael S. Gambro and Sally S. Hamilton

Exchange Offers Can Help Ailing Thrifts

Thrifts that are struggling to meet the stiff new capital requirements of the bailout law should consider whether a successful exchange offer might boost tangible capital and core earnings.

Restructuring the balance sheet through exchange offers can help an institution achieve capital compliance in two ways.

First, many instruments (such as subordinated debt and cumulative preferred stock) that had qualified as regulatory capital under prior capital regulations do not qualify as "tangible capital" for purposes of meeting the new requirements. The debt service or dividend payment requirements on these instruments also detract from the institution's ability to build capital through retained earnings.

On the other hand, common stock that may be exchanged for preferred stock or subordinated debt generally carries no fixed costs. The result is increased tangible capital and better earnings potential.

An exchange offer can be substantially dilutive, but this may be outweighed by incentives to raise tangible capital. These include growth restrictions for thrifts that fail to meet their capital requirements; possible suspension of Federal Deposit Insurance Corp. coverage for institutions with no tangible capital, and an expected "early intervention" regulation for thrifts whose tangible capital is below 1% of total assets.

However, for severely undercapitalized thrifts without core earnings, even a successful offer may provide no more than "Band-Aid" treatment. A case in point is Financial Corporation of Santa Barbara, parent of Santa Barbara Savings.

This company recently concluded an exchange offer that substantially boosted its thrift's tangible capital on a pro forma basis. Nevertheless, the Office of Thrift Supervision hit Santa Barbara the following month with a capital directive that imposed crippling operating restrictions.

Legal Considerations

In an exchange offer, existing security holders of the thrift or its holding company are invited to accept cash, newly issued securities, or some combination of the two in exchange for securities currently outstanding. The offer of new securities and the invitation to tender existing securities are each subject to regulation and trigger separate filing requirements.

Newly issued securities of a holding company must generally be registered with the Securities and Exchange Commission, while the offering of new securities by a thrift would require a similar filing with the OTS. An exemption from these requirements may be available when the offer comes from the issuer of both the outstanding securities and the securities to be issued in the exchange offer.

Whether or not an exemption applies, an offering document must be prepared that describes in great detail the terms of the offer, the outstanding and new securities, and the issuer. This will involve the participation of key thrift employees, lawyers, and accountants; it can be expected to consume substantial time and effort.

An exchange offer also subjects the offerer's conduct during the offer to various other securities regulations. These prescribe how long an exchange offer must remain open and the notification procedure for extending offers. The regulations also stipulate that consideration be paid "promptly" upon acceptance of tenders at the expiration of the offer.

Shareholder Approval

If the offerer must amend its charter to increase the number of authorized shares, state or federal law requires shareholder approval. In addition, stock exchange rules may require shareholder approval for increases in the number of shares outstanding. If shareholder approval is needed, solicitation of such holders may require compliance with federal proxy rules.

Issuers should also carefully review all outstanding agreements to determine whether the issuance of additional stock or the redemption of outstanding securities pursuant to the exchange offer requires consent the of lenders, holders of specific classes of securities, or others.

> "An exchange offer can be substantially dilutive, but this may be outweighed by incentives to raise tangible capital."

Even when shareholder approval of the exchange offer is not required, the issuer's board of directors may wish to seek such approval because of the offer's expected substantial dilutive effect on earnings per share and control.

Shareholder ratification could provide the board with some protection from lawsuits challenging these effects. The board may also find it worth the added expense of obtaining an opinion from an independent financial adviser that the offer is fair to the holders of common stock from a financial point of view.

When the Terms Change

The pendency of an exchange offer is a period of often tacit negotiation with the holders of the target securities. Any extension, waiver of condition, or change in the terms of the offer will require appropriate disclosure.

Procedures for disclosure vary according to the nature of the development, the degree to which the initial offering documents contemplated the development, and whether or not the offering is subject to certain tender offer rules.

Also, material changes relating to the thrift or holding company or external developments that might affect the security holder's decision to tender may require the updating and recirculation of the prospectus.

Even with full disclosure, the offerer is not totally free to change the offer. Special deals with substantial holders may not be possible if the tender-offer rules apply to the offer.

Moreover, although many investors may seek some combination of cash and securities in exchange for their tendered securities, applicable law or regulations may limit the sources from which cash consideration can be paid or preclude such payments altogether.

Overall Effects

The impact of a successful exchange offer on the thrift and its shareholders involves the interplay of many variables – an increase in tangible capital and improved core earnings due to reduced debt service versus the dilution of earnings per share and voting control.

Although the issuance of additional shares may also have a depressing effect on the market price of the common shares, this negative effect may be offset by the improved viability of the institution resulting from the capital infusion and prospects of improved earnings.

Weighing the effects of the exchange offer on the institution's tax position will require a careful analysis of such factors as:

- Its existing tax attributes (such as net operating losses and built-in losses).
- The possible increase in the institution's regular or alternative minimum taxable income (to the extent the discharge from indebtedness exceeds any mar-

FUNNY MONEY/ By Tom Leander

One COLA with a Twist

Apparently, the Federal Deposit Insurance Corp. has to try a little harder to get good help these days.

The federal regulator has been running an advertisement in financial newspapers seeking "highly skilled professionals for three key positions" in the mortgage-backed securities, interest rate risk, and futures and options areas.

The ad said the jobs pay $55,375 to $84,675 a year and include a unique perk – a "cost-of-living deferential."

* * *

Unreasonable Facsimile

A recent advisory letter from the Office of the Comptroller of the Currency to U.S. banking leaders leaves nothing to the imagination.

Addressed to "Chief executive officers and directors of all national banks," the April 26 letter warns that the Comptroller's office has received a series of prank facsimiles about transactions relating to a fictitious account at Continental Bank in Chicago.

"To date, the amounts referred to have been extremely large," ranging from $728 million to $1.76 trillion, says the memo.

And in case the CEOs did not grasp the message, the memo dutifully added: "Such facsimiles are not credible."

* * *

Tweaking a Card Giant

In this age of proliferating plastic, it's sometimes hard to tell an honest credit card from funny money.

So Much Fun Inc., a Concord, Mass., toy and gift company, has complicated the situation by issuing an entire line of bogus credit cards – and three of their lookalikes have irked American Express.

The "Russian Express Card," the "Ecumenical Express Card," and "The Bank of Poland Card" play off the American Express name and sport similar logos. The cards are recognizably different at second glance.

But American Express is not amused. The company has written a letter of complaint to So Much Fun's president, Steven Lishansky. The credit card giant asked his company to stop issuing the three cards because because of their similarity to American Express products.

A spokeswoman for American Express confirmed the letter and added that the company is negotiating a settlement with So Much Fun.

"We have no intention of ceasing and desisting," stated Mr. Lishansky, who also confirmed the negotiations.

He said, however, that his attorneys had advised him to change the "Neiman Mark-Up Card" – another So Much Fun product. "We're thinking of changing the name to 'Needless Mark-Up,' " he said.

Fannie Mae Begs to Differ

Fannie Mae, the mortgage agency, has been working hard to build overseas interest in mortgage-backed securities – and is reporting considerable purchasing by foreigners. But this week, at a conference sponsored by Fannie Mae, mortgage securities pioneer Lewis S. Ranieri dismissed the overseas buying as "a pimple on an elephant's back."

Fannie Mae executives were clearly taken aback. Vice President Robert Sahadi, fresh from a trip to Japan, declared, "We talked to some of the biggies, and they're buying."

Data sources: American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data provided by the **Office of Thrift Supervision,** Washington, D.C.; **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York, were used. Also, data from **W.C. Ferguson & Co.,** Irving, Tex., were used to determine yearend 1989 Resolution Trust Corp. conservatorship status of the top 300 thrifts. A "★" next to the thrift's name indicates that the thrift is currently in the conservatorship program; and a "†" indicates that the thrift was in the program and its status has been "resolved." **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) For SAIF-insured thrifts, it is "core capital"; (2) For BIF insured thrifts, it is "Tier 1" capital. As defined by Sheshunoff, **Core capital** is modified equity capital minus deferred losses minus goodwill and other intangible assets minus perpetual preferred stock plus (goodwill, other intangible assets, and FSLIC capital contributions) limited to 1½% of tangible assets. As defined by the FDIC, **Tier 1 capital** is total equity capital plus minority interests in consolidated subsidiaries minus all intangibles other than purchased mortgage servicing rights. **Please note:** the core capital figures reported to American Banker were checked against regulatory data. In some cases, American Banker changed the capital figure reported by the institution to agree with its regulatory report. **Capital/Assets(%):** is the ratio of yearend 1989 capital to yearend 1989 assets. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types:** 1-BIF-Insured; 2-SAIF-Insured. **(a)**— Consolidated data on a GAAP basis. **(b)**— The 1989 data are combined regulatory data for the thrift and its subsidiary, Gibraltar Savings Bank, FSB, Seattle. **(c)**— The 1989 data are combined regulatory data for the thrift and its division in Centereach, N.Y.

Many Thrifts Still on the Brink as Capital Proves Elusive

Continued from *page* **1**

The survey included 61 thrifts that were members of the Bank Insurance Fund. Virtually all of them had capital ratios exceeding 3%. The BIF historically has mandated tougher capital requirements.

"It is safe to predict more seizures the remainder of the year," said John Lyons, managing principal with Lyons, Zomback & Ostrowski.

Of the 2,878 SAIF-insured thrifts in the country, about 600 more will disappear over the next few years, predicted Henry Peltz, thrift analyst at Keefe, Bruyette & Woods Inc.

Capital Is Scarce

"It is going to be very difficult for these [undercapitalized] thrifts to meet the capital guidelines," he said. "The opportunity to raise capital in the public markets is extremely limited."

Although many thrifts are restructuring and struggling to meet the new capital rules, Mr. Peltz noted, "The capital requirements are only going to get stiffer between now and 1994."

>
> **Henry Peltz**
> *Keefe, Bruyette & Woods*

For some thrifts, it is already too late. Thirty-five of the top 300 thrifts have been seized by regulators and are wards of the Resolution Trust Corp.

Deposits Off Slightly

The American Banker survey found that total deposits of the top 300 thrifts fell 1.9% last year, while their assets declined 6.4%. Mr. Peltz says shedding assets was "difficult in this market because others are also downsizing so the prices you get for assets are not good."

The core capital ratios in the survey ranged from a high of 22.1% for Citicorp Savings Bank of Washington, D.C., to a negative 122% for Sandia Federal Savings and Loan Association, Albuquerque, N.M. Sandia Federal was seized by the federal regulators early last year.

Citicorp Savings of Washington is one of four thrifts owned by Citicorp, the nation's largest banking company. Citicorp's Illinois and Florida thrifts had core capital ratios of 15.6% and 13.8% respectively, ranking them second and third in this category.

String of Losses

Great American Bank, San Diego, typifies the problems faced many of the undercapitalized thrifts. After a $263.4 million loss in 1989, Great American lost an additional $1.2 million in the first quarter of this year. Most of the losses were caused by problem loans in Texas and Arizona.

Great American's capital plan calls for it to raise $350 million in new capital. Analysts say its chances of doing that are slim. The company is shopping for a merger partner or a cash infusion and is trying to shed assets, including its real estate development company.

Assets at California Federal Bank dropped about $2.6 billion in 1989. The Los Angeles thrift last year sold more than $900 million in mortgage-backed securities, its credit card portfolio and its headquarters building.

Effort to Raise Capital

Officials said these moves were an attempt to raise additional capital, while also shrinking assets to fit CalFed's capital base.

Coast Savings and Loan Association, Los Angeles, undertook a major financial restructuring in 1989 to strengthen capital. The company eliminated $242 million of goodwill and exchanged debt for equity. It also lopped off $1.6 billion in assets by eliminating income-property lending and selling loans and mortgage-backed securities.

The *American Banker* core capital ratio uses total assets instead of tangible assets, which are total assets minus deferrals and intangible assets. For most of the thrifts listed, the *American Banker* ratio will be five to 15 basis points lower than the ratio calculated by the Office of Thrift Supervision. □

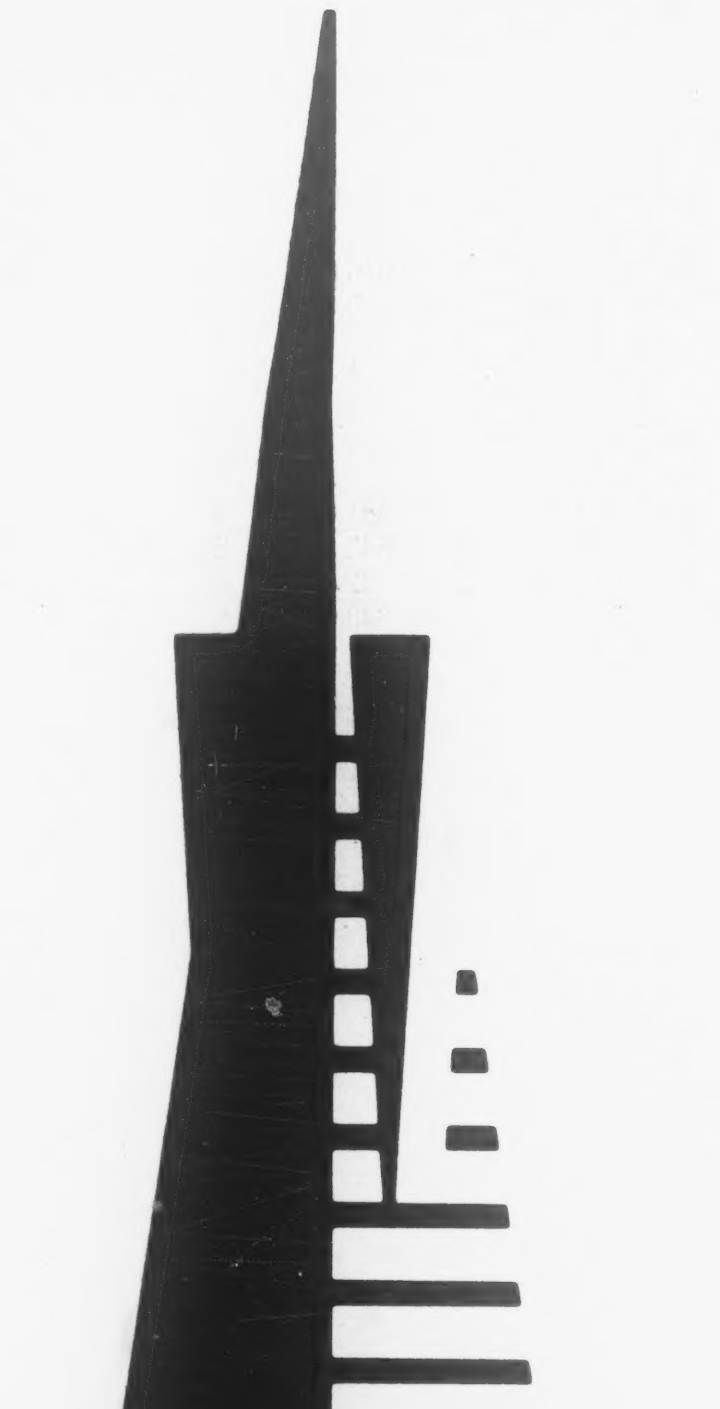
Furash & Co. Names Senior Vice President

WASHINGTON — The consulting firm of Furash & Co. has named William B. Williams as senior vice president.

Mr. Williams, a specialist in strategic cost management and the organization of bank holding companies, most recently was president of Bank Earnings International's East Coast consulting division.

Furash has also named as vice president William F. Spinard, a former senior vice president at BEI Golembe Inc., to consult on financial restructuring matters.

Innovative Insurance Answers



Backed by "The Power of the Pyramid" SM

Transamerica Specialty Insurance. . . the only name you need to know for responsive service and innovative answers to your special insurance needs.

We pioneered forced-placed insurance for lenders. We're still the leader because we work with you to create the protection programs you require.

Now we're offering our Premier Protection Package, featuring the proven loan protection products you expect from Transamerica:

- Auto
- Mortgage
- Mobile Home
- Flood
- Life
- Involuntary Unemployment

Give us a call. We'll help you identify all your special insurance needs and custom design a complete package of special coverages for you.

Put "The Power of the Pyramid" SM *to work for you.*

Data sources: American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data provided by the **Office of Thrift Supervision,** Washington, D.C.; **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York, were used. Also, data from **W.C. Ferguson & Co.,** Irving, Tex., were used to determine yearend 1989 Resolution Trust Corp. conservatorship status of the top 300 thrifts. A "★" next to the thrift's name indicates that the thrift is currently in the conservatorship program; and a "†" indicates that the thrift was in the program and its status has been "resolved." **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) For SAIF-insured thrifts, it is "core capital"; (2) For BIF insured thrifts, it is "Tier 1" capital. As defined by Sheshunoff, **Core capital** is modified equity capital minus deferred losses minus goodwill and other intangible assets minus perpetual preferred stock plus (goodwill, other intangible assets, and FSLIC capital contributions) limited to 1½% of tangible assets. As defined by the FDIC, **Tier 1 capital** is total equity capital plus minority interests in consolidated subsidiaries minus all intangibles other than purchased mortgage servicing rights. **Please note:** the core capital figures reported to American Banker were checked against regulatory data. In some cases, American Banker changed the capital figure reported by the institution to agree with its regulatory report. **Capital/Assets(%):** is the ratio of yearend 1989 capital to yearend 1989 assets. **Charter Types: 1-**Mutual Savings Bank; **2-**Stock Savings Bank; **3-**Mutual Savings & Loan Association; **4-** Stock Savings & Loan Association. **Insurance Types:** 1-BIF-Insured; 2-SAIF-Insured. **(a)**— Yearend 1989 data are regulatory data for the thrift only. The 1988 data are consolidated for the thrift and its two subsidiaries in Iowa and Minnesota.

Data sources: American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data provided by the **Office of Thrift Supervision,** Washington, D.C.; **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York, were used. Also, data from **W.C. Ferguson & Co.,** Irving, Tex., were used to determine yearend 1989 Resolution Trust Corp. conservatorship status of the top 300 thrifts. A **"★"** next to the thrift's name indicates that the thrift is currently in the conservatorship program; and a **"†"** indicates that the thrift was in the program and its status has been "resolved." **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) For SAIF-insured thrifts, it is "core capital"; (2) For BIF insured thrifts, it is "Tier 1" capital. As defined by Sheshunoff, **Core capital** is modified equity capital minus deferred losses minus goodwill and other intangible assets minus perpetual preferred stock plus (goodwill, other intangible assets, and FSLIC capital contributions) limited to 1½% of tangible assets. As defined by the FDIC, **Tier 1 capital** is total equity capital plus minority interests in consolidated subsidiaries minus all intangibles other than purchased mortgage servicing rights. **Please note:** the core capital figures reported to American Banker were checked against regulatory data. In some cases, American Banker changed the capital figure reported by the institution to agree with its regulatory report. **Capital/Assets(%):** is the ratio of yearend 1989 capital to yearend 1989 assets. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types:** 1-BIF-Insured; 2-SAIF-Insured. **(‡)**— Rank thrift would have had, if it had been included in the survey.

Data sources: American Banker questionnaire. For those thrifts not responding to the American Banker, data provided by the **Office of Thrift Supervision,** Washington, D.C.; **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York, were used. Data from **W.C. Ferguson & Co.,** Irving, Tex. were used to determine Resolution Trust Corp. conservatorship status of the top 300 thrifts. **(★)**— The thrift is currently in the conservatorship program. **(†)**— The thrift was in the RTC conservatorship program and its status has been "resolved." **(a)**— Combined regulatory data for the thrift and its subsidiary, Gibraltar Savings Bank, FSB, Seattle. **(b)**— Combined regulatory data for Long Island Savings Bank FSB, Melville, and its division in Centerreach, N.Y. **(c)**— Yearend 1989 data are regulatory data for the thrift only. The 1988 data are consolidated for the thrift and its two subsidiaries in Iowa and Minnesota.

Data sources: American Banker questionnaire. For those thrifts not responding to the American Banker, data provided by the **Office of Thrift Supervision,** Washington, D.C.; **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York, were used. Data from **W.C. Ferguson & Co.,** Irving, Tex. were used to determine Resolution Trust Corp. conservatorship status of the top 300 thrifts. **(★)**— The thrift is currently in the conservatorship program. **(†)**— The thrift was in the RTC conservatorship program and its status has been "resolved." **(‡)**— Rank thrift would have had, if it had been included in the survey.

Bond Ratings Prove Unreliable Guide to Market

By KELLEY HOLLAND

NEW YORK — When they were downgraded two weeks ago, the bonds of Chemical Banking Corp. quickly lost value.

The market reaction to the move by Moody's Investors Service was perfectly logical, but what made less evident sense was where Chemical's bonds were trading relative to those of similarly rated banking companies.

Rated Ba2 after the downgrade, Chemical's 9¾% subordinated capital notes maturing in 1999 were quoted at a yield of about 13%. That was up 20 basis points on the day but still about 490 basis points lower than the yield on the Ba2-rated bonds of Midlantic Corp., maturing in 1999.

ANALYSIS: *Follow-up on the news*

But at the same time, the Chemical notes were 150 basis points higher than the 11.5% being quoted on Manufacturers Hanover Corp.'s Ba2-rated 8½% bonds of 1999.

As odd as such discrepancies may appear, traders and analysts say they have become the rule rather than the exception lately in an increasingly topsy-turvy bank bond market.

"A year ago, all someone had to do was tell you a Baa bank, and you knew between 10 and 20 basis points where they'd trade," said one bank bond trader. "Nowadays, the range would be about 200."

Several factors account for the new face of the market, analysts and traders say. Chief among these is the vastly increased perception of risk in the banking industry in the past few months as credit quality problems mounted. Liquidity has evaporated, causing wider spreads, as skittish investors either avoid bank bonds entirely or become much more name-conscious.

'Trading on Perception'

"The market's trading on perception and buzzwords," said Ann Robinson, a vice president at Donaldson, Lufkin & Jenrette.

"There has never been and never will be a perfect correlation between yield spreads and bank ratings," said Christopher T. Mahoney, an associate director at Moody's Investors Service. "There's plenty of room for discrepancy between spreads."

But Mr. Mahoney and other analysts acknowledge that lately the market has been more out of synch than usual.

How AT&T's Universal Card Works

1. AT&T solicits applications for MasterCards and Visa cards
2. The cards are issued by Universal Bank, Columbus, Ga.
3. A bank affiliate, Total System Services Inc., processes transactions and bills cardholders
4. Universal Bank sells loans to AT&T

AT&T's Entry into Credit Cards Seen Secure from Bank Protests

By YVETTE D. KANTROW

NEW YORK – Although four major banks filed regulatory complaints last week against the AT&T Universal Card, legal experts said there was little the banks could do to keep American Telephone & Telegraph Co. out of their business.

By asking regulators to examine whether the AT&T offering violates banking and communications laws, the banks reignited the controversy over nonbanks' entering the consumer financial services business.

Because it is not a bank, AT&T arranged for affiliates of Synovus Financial Corp., a Columbus, Ga., holding company, to issue and process MasterCard and Visa cards on its behalf.

The companies protesting the deal – BankAmerica Corp., Chase Manhattan Corp., Citicorp, and MNC Financial Inc. – argued that AT&T effectively controls a banking affiliate of Synovus. Such control would violate laws prohibiting industrial

Nationwide Insurance Powers Gain In Delaware

By A. JOSEPH NEWMAN JR.
Special to the American Banker

PHILADELPHIA — Banks seeking to enter the insurance business won a major victory last week as the Delaware Senate voted to allow those with operations in the state to underwrite and sell insurance nationwide.

The bill, which had previously passed the state House of Representatives, extends insurance powers to about 40 prominent money-center and regional banks with state-chartered affiliates in Delaware.

Largest Banks in U.S.

Among them are some of the largest credit-card banks in the country – subsidiaries of Chase Manhattan Corp., the Bank of New York Co., and MNC Financial Inc. – and wholesale banking units of Citicorp and Manufacturers Hanover Corp.

Although several other states allow state-chartered banks into the insurance business, Delaware became a key battleground

Japanese Banks Seen as Reluctant On UAL Deal

By WILLIAM GOODWIN

Advisers to the unions proposing to purchase UAL Corp. appear to be proceeding on the assumption that they may have to finance the deal without the participation of Japanese banks.

Banking sources said that while the unions' financial advisers would like to have the commitment of Japanese lenders for the $4.4 billion transaction, there are indications the Japanese may be just as reluctant to support a deal as they were last fall. The Japanese were blamed for the collapse of the UAL Corp. buyout then.

More so than their U.S. counterparts, Japanese bankers have been extremely cautious about the new deal, which would require $4 billion in loans. Their reluctance stems from their distasteful experience with last fall's failed buyout, as well as their growing skittishness about leveraged transactions.

"We are very neutral at this moment," said an official at a major Japanese bank.

For that reason, officials at

FDIC Keeps Coming Up Empty In Effort to Sell Ethanol Plant

By STEPHEN KLEEGE

NEW YORK — When the government seized American Diversified Savings Bank of Costa Mesa, Calif., U.S. officials hoped to pick up a quick $16 million through the sale of the thrift's investment in an ethanol plant in Nebraska.

Two years and five torn-up purchase agreements later, the government is still running the plant. Its sales effort has deteriorated into a sideshow of lawsuits, allegations of political interference, and judicial intervention.

'A Classic Example'

Meanwhile, bids for the plant have dropped in value, despite an improving outlook for ethanol because of government subsidies aimed at cleaning the nation's air.

COMMENT/*By Paul S. Nadler*

Candid Critic Looks Ahead And Sees a Deep Darkness

George Salem, bank analyst for Prudential-Bache Securities, is unlike most security analysts at brokerage firms: He calls them as he sees them, whether his outlook is pessimistic or optimistic.

Unfortunately, Mr. Salem's type of honesty in what he writes is rare. Many analysts admit in private that they are so intimidated by their employers that they hesitate to issue sell reports on corporations. The reason: Their employers are trying to attract corporate finance and brokerage business from the companies being analyzed.

But Mr. Salem isn't cowed. Not only has he been responsible for damaging reports on many banks through the years, but now he has written a report suggesting that investors sell virtually the entire industry!

Daunting Truths

Six facts, Mr. Salem reports, will burden earnings through this entire year and 1991, too, making it highly unlikely that bank share prices will recover anytime soon:

- Industry overcapacity on a global basis — so great an excess of competitors in provision of financial services that several years of consolidation, shakeout, and rationalization will be required to overcome it.
- Deteriorating loan quality, with declining quality of consumer loans likely to join real estate, highly leveraged transactions, and LDC loans on the headache list in the near future.
- Net interest margin pressure on both money-center and regional banks.
- A poor profitability outlook for investment banking, due both to muscular new entrants and a slowdown in revenue generation.
- Less fee income, as the end of the merger-and-acquisition, leveraged buyout, and highly leveraged transaction booms combines with the slowdown in real estate construction lending. (All have been high fee generators.)
- Lower future loan growth – a cyclical problem rather than a structural one.

Except for readers old enough to have been involved in banking in the 1930s, this is a forecast for the worst banking conditions in a lifetime.

But no participant in any industry has survived by looking at the worst and concluding that it must simply be endured.

Like the soldier whose unit is told, "You 1,000 men are going into battle, and only one of you will come out alive," and who then thinks, "Gee, I'm going to miss the guys," good bankers should feel they have means of avoiding the fate Mr. Salem predicts for them.

Glimmering Hope

What sort of luck might help? Mr. Salem suggests several:

- A recession may be avoided. That would lessen the losses that will be incurred on highly leveraged transactions and real estate credits.
- Inflation and interest rates could plunge. That would be bullish for liability-sensitive banks.
- Stock investors may have discounted the worst.

But basically, the positive forces that Mr. Salem presents all involve action by bankers themselves. These actions include consolidations and staff cuts, pricing discipline, and well-managed banks' acquiring failed institutions at no or low cost.

One might conclude that George Salem is so close to the industry and has seen so many "top rated" banks and their CEOs fall that he has become too pessimistic in reaction.

On the Other Hand

In this fantastically resilient nation, superpessimistic forecasts have seldom proved true for long. Even the forecasts of "Dr. Doom" and "Dr. Death" – Henry Kaufman and Al Wojolinauer – became true only in the unbelievable period under President Carter when the prime soared to 21½ percent.

And keeping in mind the old adage, "What you fear most never happens; something else does," one might conclude that George Salem's predictions of a terrible bank stock market and terrible bank earnings for the next year-and-two-thirds may not come to pass.

The Good Old Days Are Over

But bankers still have a valuable lesson to learn from this courageous analyst's forecasts. For the days are over when most banks made money year in and year out because the economy was strong and the borrowers were basically honorable and had could pay their debts, to boot.

What George Salem and his associate, Donald Wang, seem to be saying is:

"Banking can no longer survive and thrive on luck and solid economic conditions. And if you don't realize this and react now through efficiency and solid pricing – even at the expense of slow growth or shrinkage – your complacency will be at your own peril." □

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

Since the beginning of the year, rating agencies have downgraded bank securities. Meanwhile regulators, using strict new standards, have scrutinized banks, often casting doubt on their creditworthiness. Lately, the examiners have publicly disputed the notion that their standards are any tougher and have downplayed talk that their activities have precipitated a credit crunch. Nonetheless, rating agencies have continued to lower their assessments of some of the country's largest banks. *American Banker* reporter Kelley Holland asked industry experts the following question:

Q ***Are recent downgrades of bank debt a signal that the rating agencies are getting tougher than the regulators?***

■ Richard R. Pannone
Treasurer
Fleet/Norstar Financial Group
Providence, R.I.

I think the rating agencies have somewhat changed their approach to rating. They seem to be addressing not only the fundamentals of an issuer, but also the larger economic environment.

In many ways, that resembles what the regulators are doing.

The regulators have very stringent, very conservative standards in assessing, for instance, the value of real estate. But they're also looking at the environment the banks are operating in. Now, the rating agencies are doing the same thing.

I think the rating agencies are responding to the more conservative approach the regulators are taking.

■ Clifford M. Griep
Managing director
Standard & Poor's Corp.
New York

There's no effort to be tougher than the regulators. We're not competing with the regulators.

We're both looking at the same risks. The downgrades in the industry reflect, for the most part, deteriorating asset quality, specifically in the real estate sector.

Are the regulators being too harsh? That's a hard one to judge. The ratings are our assessment of risk, based on our expectations of performance and portfolio quality.

I don't think anything's changed about the nature of our analysis. We've always looked at regional economic performance and bank exposure to specific industries and sectors.

I think we're responding to the same things as the regulators. Nonetheless, I don't think you can compare what a rating agency does with what a regulator does.

Clearly, the regulators have taken some actions over the years that have implications for ratings.

■ Anat Bird
Bank consultant
BDO Seidman
New York

I don't think the rating agencies are necessarily getting tougher than the regulators.

They're both going to be equally tough. The regulators are encouraging banks to keep making loans, but they'll be tough when they examine.

The rating agencies are reflecting reality. Meanwhile, the regulators are encouraging banks to do business as usual. But it's not business as usual.

When the regulators examine, they cannot take the chance of being too lax, given what that approach has caused in the past.

Both rating agencies and regulators try to be institution-specific. But neither can ignore the fact that the whole industry is in a downturn.

The difference is that the regulators expect the banks to originate loans as if business were as usual, but they examine the loans as if the risk were much higher. The rating agencies are simply trying to rate on the basis of the perceived risk.

■ Thomas K. Brown
Analyst
PaineWebber Inc.
New York

A lot of things are coming together at once.

One, we're on the downside of the economic cycle, so credit quality in general is deteriorating and the banks' credit quality is deteriorating.

Two, the rating agencies are responding to the fallout of tougher examinations — that being an increase in nonperformers and a reduction in capital. An overreaction by the regulators is causing an overreaction by the rating agencies: Because regulators have an effect on the numbers banks report, the rating agencies have responded to that.

And three, like the regulators, the rating agencies have been accused of being too slow, and they don't want that to happen again.

But the rating agencies are looking at different things than the regulators. The regulators are forecasting when they look at the loan portfolios, while the rating agencies have a broader view – they're really looking at credit quality. □

SPECIAL REPORT

AMERICAN BANKER

FOCUS ON EDI

ROUND TABLE
Corporate cash managers and a banker debate merits of EDI. **Page 9A**

Overview

Speeding the Flow of Dollars and Data

BY JASON FORSYTHE

As the 1990s begin to unfold, the banking industry still finds itself sitting anxiously on the cusp of a computer revolution that has swept the country for a decade.

While the Fortune 500 goliaths of America are finally jumping into electronic data interchange, most banks they are using to transfer their funds are timidly testing the EDI waters.

Deciding to Decide

Some banks have made progress in clearing the many technical, financial, marketing, and legal hurdles to transmitting data and payments electronically. But most banks are just now formulating strategies to decide what their role should be.

If they wait too long, experts warn, they could well be left on the sidelines as nonbank competitors fill corporate America's insistent need.

"It is my sense that for most banks, EDI is not a thing that they want to do but something they have to do," said David Bruce of Coopers & Lybrand.

With investment costs topping $1 million, few banks if any are making money on EDI. Nevertheless, corporate customers – especially the leaders in retailing, transportation, pharmaceuticals, oil, chemicals, and cars – are demanding EDI's flexibility and savings.

EDI is the electronic transmission of routine business data, such as invoices, purchase orders, and remittance data. It reduces paper flow.

Cost and Change

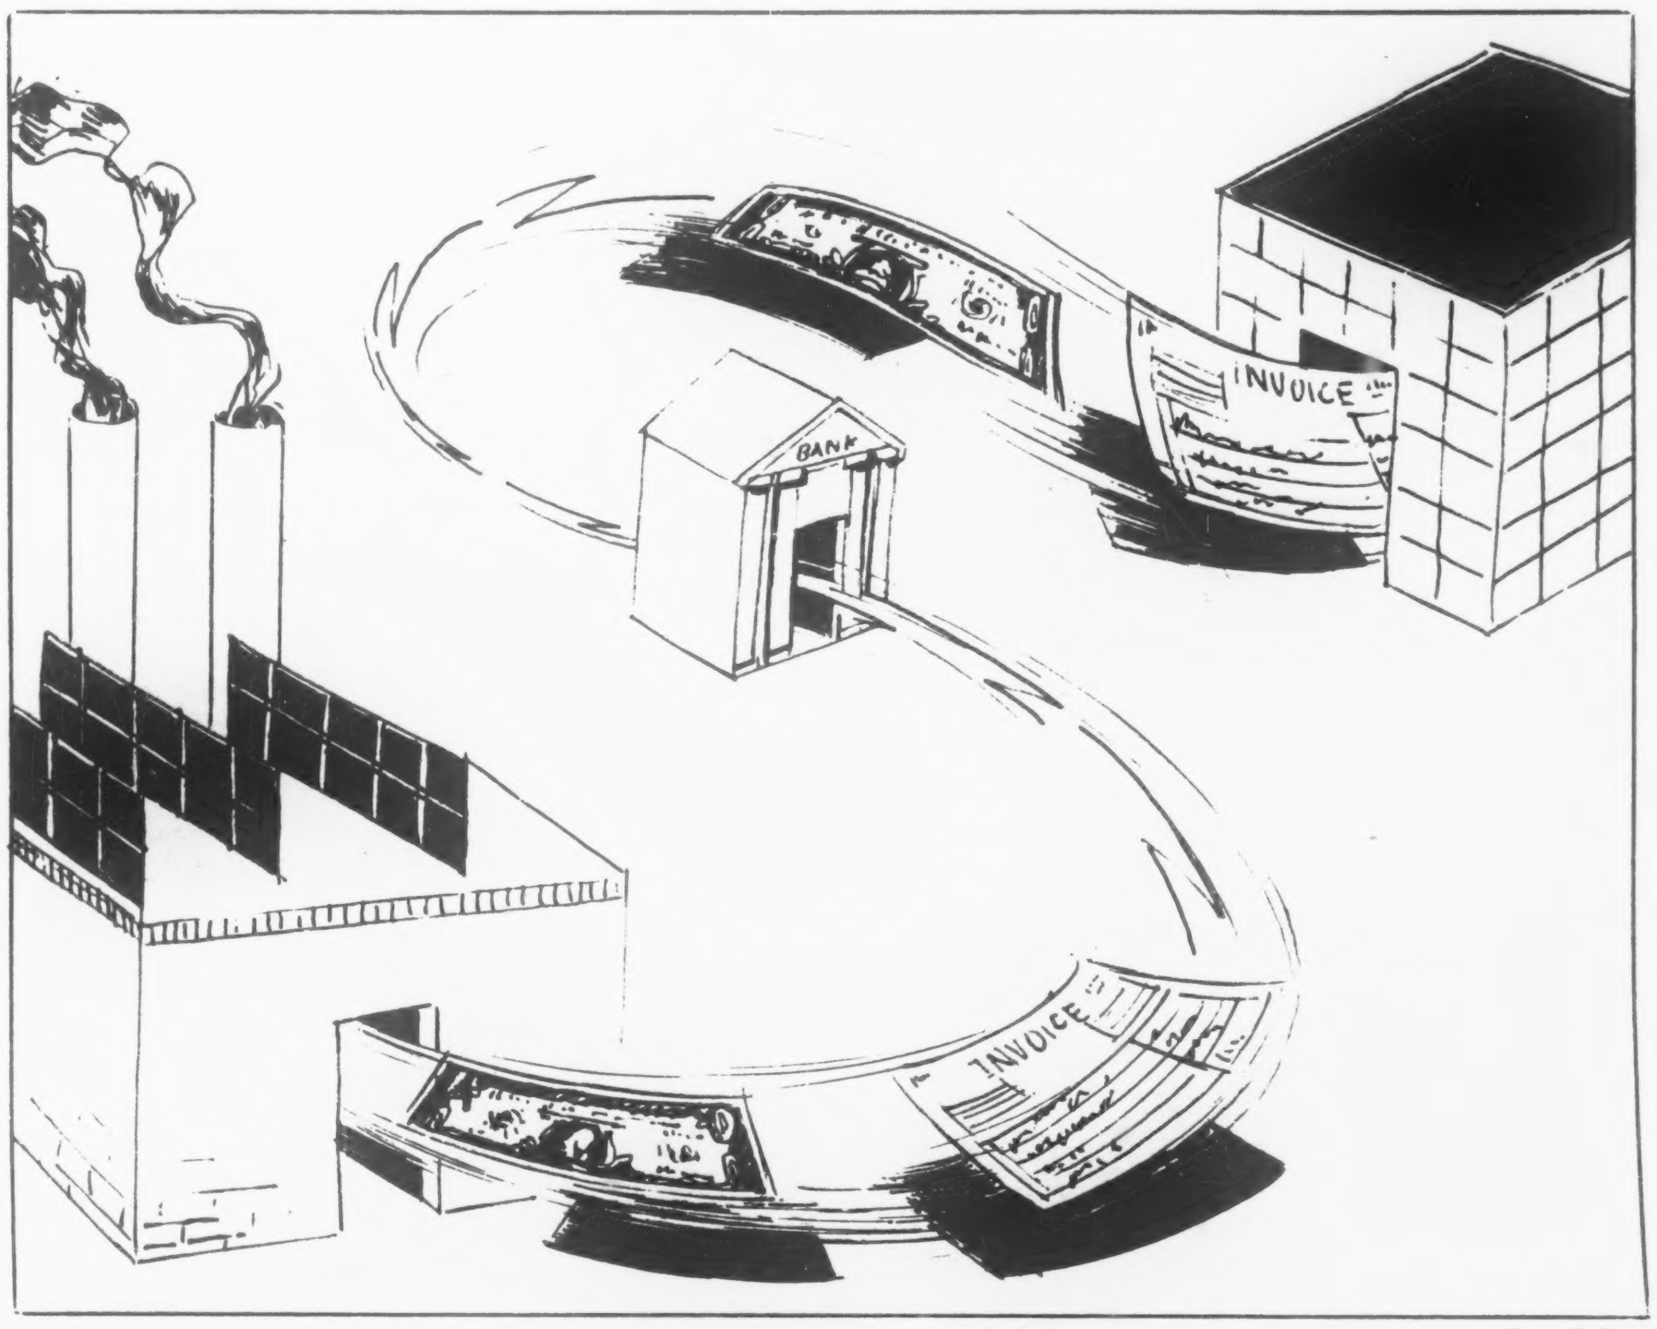
For banks, EDI represents a steep investment in technology that will change how they service corporate customers.

Some bankers view it as a source of growth for their existing cash-management and funds-transfer services. But getting into EDI also affects other services, alters the way banks make their money – and could siphon fees from some traditional cash-management products.

The top cash-management banks have shown the greatest interest, but even among them, self-starters are rare. In a recent study of 20 of those banks – 10 from the top 25, 10 from the next 100 – Coopers & Lybrand found that many were entering EDI as a "reactive" move spurred by the constant badgering of corporate clients.

"While there are, of course, a few innovators – First Chicago, Pittsburgh National, or National Bank of Detroit and a few others – that say EDI will help us attract some business that we wouldn't otherwise get, the move to EDI for most banks is just satisfying the existing client base," says Mr. Bruce of Coopers & Lybrand.

Some banks entering the market are teaming up with EDI vendors to offer not just payments, but all types of EDI services.



James R. Jones

Consortiums

Others banks are getting involved by joining consortiums that will let them tap a growth source for their existing cash-management and funds-tranfser services without making costly investments. One such group is Financial Data Interchange Service, an eight-bank consortium with Sears, Roebuck & Co. American Telephone and Telegraph Co. is forming a similar alliance.

Anita Emard, vice president with the Citibank group that manages electronic funds transfer (EFT) and EDI products, points out some of the complications.

"Today not a lot of banks are doing anything with EDI – mostly because it requires a significant up-front investment to develop a fully featured, comprehensive, and integrated EDI/EFT service that you can offer to corporate customers,"

American Banker Survey Report

Banks Testing the EDI Waters

BY RICHARD LAYNE

Banks have spent millions of dollars to offer a new communications technology for cash management, and profits are not yet in sight.

The technology, which promises to move banks from processing paper to electronics, may also bring a shakeout among service providers and create a new source of nonbanking competition, according to a survey done by the *American Banker* of the top cash management banks.

In February and March, the *American Banker* sent a questionnaire on electronic data interchange to the top 100 cash management banks.

Sixty-nine banks responded, and 56 said they are using EDI, a communications technology that allows banks to receive and transmit payments and payment information through an automated clearing house in standard formats.

Most banks that offer the service do so either to maintain a customer relationship – "protect the paper franchise," in one banker's phrase – or for a competitive advantage.

More aggressive banks think this relatively new communications technology will create a top tier of 10 or 20 cash management banks.

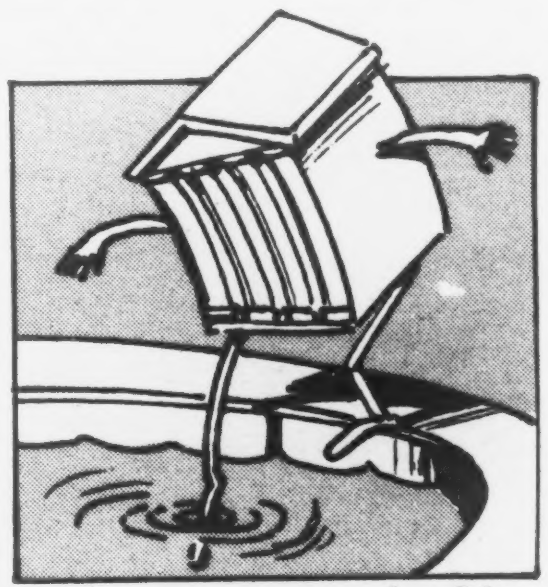
"EDI will separate the men from the boys," said Terry Feder, senior vice president of Security Pacific National Bank and managing director of the Sequor Group, the wholesale securities and cash transaction processing division of Security Pacific Corp.

Retailers, transportation companies, and manufacturers have used EDI for 20 years as a way to exchange purchase orders and invoices while eliminating paper from the purchasing process.

In 1986, General Motors Corp. became the first company to use EDI to transfer funds and electronic invoices through banks.

Slow Going

Other corporations have been slow to follow. Of the 56 banks that offer EDI, 18 said the electronic service handles less than 1% of their payment volume.



James R. Jones

Even the banks that originate payments for GM say that volumes are small.

Almost half the respondents spent between $101,000 and $499,000 on EDI investments. Several bankers interviewed for this article said their banks have spent more than $500,000 to build systems for EDI.

Before offering the service, banks need to set up software and communications to translate between computer formats that corporations and other banks use.

The translation lets the payment information generated by companies in one format travel through the automated clearing house network in another.

Bankers refer to this as han-

dling dollars and data.

No bank claims to have recouped its EDI investment and turned a profit. "I would imagine that EDI is not profitable for any bank," said Carol E. King, vice president, EDI division manager, at First National Bank of Chicago, a unit of First Chicago Corp. "There are big expenses to being a player in this, and it hasn't been around long enough."

Corporations are less interested in financial EDI than in trade-document EDI, in which companies exchange purchase orders and invoices.

In an interview early this year, John McWilliams, director of finance at Bergen Brunswig Corp., a big pharmaceutical wholesaler, said financial EDI offers little in the way of savings.

If 20% of suppliers were being paid this way, Bergen would save $1,200 a month in check-generation charges, he said. But if those same suppliers could exchange purchase orders and invoices with Bergen through EDI, the company would save $144,000.

Nevertheless, Mr. McWilliams said his company will not do business with a bank that does not offer EDI services. "It's not for the money," he said. "It's completing a cycle in the exchange of data."

"With EDI, you are substituting electronics for paper," said Ralph Joy, who is vice president and business unit manager of electronic services at the bank subsidiary of Mellon Bank Corp.

"You have to offer them a reason beyond internal cost saving, such as error reduction and a more efficient use of staff."

Mr. Joy says sales people need six months to persuade a customer to use EDI for receivables and twice as long to persuade them to use EDI for payables.

Defense Contractors

"Our experience on the West Coast is that clients are slower to react, but they are now coming to the fore," said Mr. Feder of Security Pacific.

He said he has pilot projects under way with four West Coast defense contractors.

"Cash management as a whole is becoming increasingly important to our client base, as compared to a credit relationship," said Ms. King of First National Bank of Chicago.

"EDI is important, but it is not overshadowing cash management activities."

Most major banks, including Ms. King's, are planning for a time when increased volumes will make EDI a more important offering. Three-quarters of the respondents said EDI will be a necessary service.

"If a bank can't play in the EDI world, it will lose its payments business," Mr. Feder said.

Signs of a Shakeout

Signs already exist of a potential shakeout among cash managers, based on the willingness to invest in the technology.

"We are attracting business that would go to other banks that don't have EDI," Ms. King said. Bechtel Corp., which did not have a cash management relationship with the Chicago bank, now uses its EDI service, Paystream.

"We see EDI as having long-term potential, a way to differentiate one cash management provider from another," Mr. Feder said.

Not all big banks offer cash management, and bankers speculate that not all cash managers will offer EDI. Bankers speculate that a top tier of banks, perhaps 10 or 20, will offer a full-range of EDI services. Smaller banks may hire these banks to do EDI for them.

The VAN Threat

Bankers are less worried about a shakeout among cash managers than the potential threat from communications companies. Almost 50 respondents said these nonbanking companies are a threat to the cash management business.

These companies, often referred to as value-added networks (VANs), can transmit electronic invoices between corporations, leaving banks to handle just the transfer of funds. Whatever business GE Information Sercvices and other communications companies can amass comes at the expense of banks.

But the issue is more complicated. Banks have formed alliances with VANs, to promote EDI usage and for their communications abilities.

Mellon, for example, is one of eight banks that have formed a consortium with Sears Communications Co., a unit of Sears, Roebuck & Co., to offer EDI services. Security Pacific is allied with BT Tymnet Inc., and First Chicago uses the network of International Business Machines Corp.

"IBM is in the communications business," said Ms. King. "First Chicago is in the electronic payment business. That is not a threat. It is good for our clients."

But VANs are a threat, she said. "The threat is that a corporation may move the payment responsibility to the VAN, where the VAN is responsible for processing the payment."

Bankers are divided on whether they should encroach on the VANs' processing and transmission business.

Ms. King said bankers should stick to banking. "Unless banks can add value in the processing of messages such as invoices or purchase orders, we should not do it," she said. "The communication network business is well supplied. I don't see that as our niche."

Mr. Feder disagrees. He said banks should consider transmitting invoices and purchase orders in competition with VANs.

"Banks have provided data with information to customers for 20 years," he said. "We are not likely to cede this business to the [GEs] of the world." ☐

ROBERT PRYOR

If Lorenzo de' Medici were alive today, here's one award he'd want.

As a business leader and patron of the arts, Lorenzo would have wanted the Medici Bank to get the credit it deserved.

Today, those businesses that supported the arts in 1989 can compete for a Business in the Arts Award. Sponsored by the Business Committee for the Arts and FORBES Magazine, this prestigious national award recognizes innovative partnerships between business and the arts.

Nominations are now open for any business, large or small, that contributed money, personnel, goods or services to the arts. To nominate a business, write the Business Committee for the Arts, Inc., 1775 Broadway, Suite 510, New York, NY 10019. Or call (212) 664-0600 for information.

But you must not delay: The deadline for entry is May 31, 1990. After that, your business will have as much chance to win as Lorenzo de' Medici.

Midwest Banks Appear Ready For Examiners

By BILL ATKINSON

ANALYSIS: *Follow-up on the news*

WASHINGTON — If any banks can withstand toughened examinations by the Office of the Comptroller of the Currency, those in the Midwest have the best chance, analysts say.

"I think you'd be too much of a Pollyanna to think the Midwest won't see some increases" in nonperforming real estate loans, said Kenneth F. Puglisi, an analyst at Keefe, Bruyette & Woods Inc. But he said the dose of regulatory medicine would not be as severe as in New England and the Southeast.

Huge provisions for real estate loan losses in the latter two regions caused red ink at some of their largest institutions.

Midwest examiners are moving quickly to identify problems before they get out of control and are not becoming too harsh, according to John R. Powers, acting deputy Comptroller in the agency's Chicago office. "We don't have any Texas rangers out here," he said. "If you choose one word in the central district, it is 'solid.' "

Several large midwestern regional banking companies have already shown the effects of recent national bank examinations; others are certain to follow. But the regional economy is relatively healthy, and recent increases in nonperforming loans have not matched New England levels.

Nonperformers Up Sharply

Michigan National Corp., Farmington Hills, said in May that its nonperforming loans had risen nearly 45%, to $139 million, after a Comptroller's examination that included scrutiny of the commercial real estate portfolio.

Ameritrust Corp. lost $51.6 million in the first quarter after a special provision – taken at the behest of examiners – of $120 million for possible loan losses. The Cleveland-based company said it increased reserves to cover a potential economic slowdown and a decline in real estate values in other parts of the country, including Florida.

NBD Bancorp, the profitable parent of National Bank of Detroit, may be next.

'A Definite Slowdown'

"We are seeing a definite slowdown on really all fronts, which is to say, leasing and sales have slowed down and so has [loan] production," said Thomas J. McDowell, president of NBD Mortgage Co., an NBD

In Spite of Bailout, Profits Sank At the Nation's Healthiest Thrifts

By PHIL ROOSEVELT

NEW YORK — The thrift bailout law was widely expected to boost the industry's strongest and most profitable players. But so far, there is little evidence of this at the bottom line.

In fact, earnings of the top 100 thrifts in profits declined nearly 10% in 1989, according to an *American Banker* survey. Return on assets changed little, averaging 0.67%. (See tables, beginning on page 14).

Hope Lingers On

Many executives and analysts still expect the industry's strong money-makers to excel in the wake of the thrift law. Competition from troubled, desperate thrifts has been reduced, and survivors with capital will be able to expand strategically.

But the benefits may take longer to materialize than initially thought, and they may not be as dramatic.

Competition from Banks

One of the biggest obstacles to better earnings is increased competition from commercial banks. Though the profitable thrifts have seen the weaker ones weeded out of the industry, commercial banks have been storming into the home mortgage market, long the bread and butter of thrifts.

"This is as cutthroat a mortgage market as I can recall," says

RTC Bucking State Laws In Bid to Spur Thrift Sales

By BILL ATKINSON

WASHINGTON — In another aggressive move to speed the sale of seized thrifts, the Resolution Trust Corp. formally adopted on Thursday a rule permitting banks to acquire and operate the branches of failed thrifts even if that violates state laws.

The controversial ruling seeks to override legislation in at least 10 states. Of the 320 thrifts under RTC control, 46 with total assets of $10 billion are in these states.

While the number of thrifts affected by the ruling is relatively small, the action is important because it reflects the RTC's new get-tough approach to disposing of seized assets. In other recent actions, the agency has decided to discount prices on slow-moving real estate and reduce the size of down payments.

The RTC hopes its latest move will encourage banks to buy thrifts in order to gain statewide branch networks.

The action is sure to spur legal challenges from state banking interests. But the RTC, increasingly burdened with the inventory of hundreds of failed thrifts,

Banks to Test Paying Taxes Electronically

By JEANNE IIDA

SAN DIEGO — Four New England banks will be the first to transmit electronic payments of taxes to the federal government in a test scheduled to begin June 5, Treasury Department officials said this week.

In the trial, Bank of New England, State Street Boston Corp.'s State Street Bank & Trust Co., Connecticut Bank and Trust Co., and Durfee Attleboro Bank will send withholding-tax payments to the Internal Revenue Service in Andover, Mass., via the automated clearing house network.

A Handful of Transactions

The test is called Adept, an acronym for automated deposit of electronic payments for taxes. At first it will involve only a handful of transactions. It is the first step toward what government officials hope will be widespread acceptance of paperless tax payments by corporations

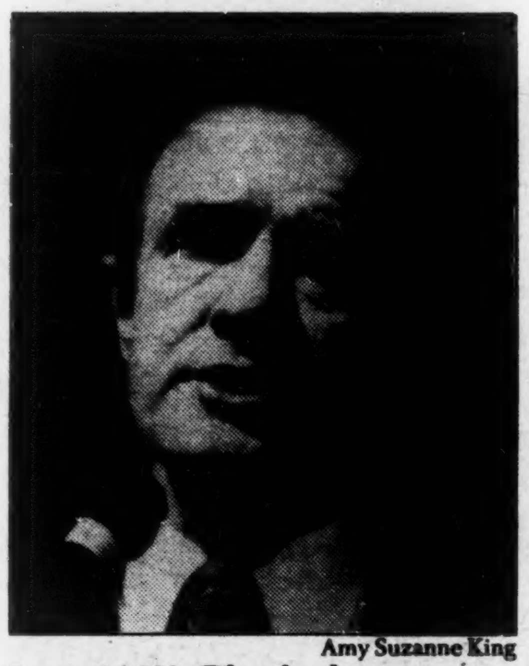
Senate Bill Would Pressure Japan To Open Up Its Financial Markets

By ROBERT M. GARSSON

WASHINGTON — Taking aim at Japan's hard-to-crack financial markets, the Senate Banking Committee approved legislation Thursday that would authorize federal banking regulators to deny applications from banks whose home countries discriminate against U.S. financial institutions.

The Fair Trade in Financial Services Act, sponsored by committee chairman Donald W. Riegle Jr., D-Mich., was attached by voice vote to a measure amending the Defense Production Act. A markup of that larger bill was nearing final committee approval on Thursday afternoon.

If passed by the full Senate, the financial services measure would go to the House, which does not have a counterpart to Mr. Riegle's bill. It endorses the regulatory concept of national treatment: The United States would give foreign banks the same operating latitude as domestic banks, but would retaliate against the banks of any country that is deemed to discriminate against U.S. banks.



Amy Suzanne King

Donald W. Riegle Jr.
Senate Banking Committee

Mr. Riegle's measure is aimed primarily at Japan.

President Bush opposes the Riegle bill and would veto it if it comes to him as a freestanding bill. But the administration has not considered what it will do if the measure is attached to another bill, a Treasury representative said Thursday.

The Senate Banking committee voted to recommend that the

COMMENT/*By Irvine Sprague*

Seidman's Frankness Irks Political 'Team Players'

WASHINGTON — It makes a great deal of sense to some staffers in the Bush administration to dump Bill Seidman. Bank crooks and those who looted savings and loans don't like him either.

Seidman has that annoying habit of telling the truth, which frustrates efforts to cover up the seriousness of the savings and loan scandals and the real cost to the taxpayers. He also won't take orders from those who have no real understanding of the depth of the problem.

The General Accounting Office says we are talking about a cost ranging from $325 billion to $500 billion over the next 30 years, at least double the cost the administration had originally admitted to.

Where is the push coming from to oust Seidman?

Triple Threat

It would be fair and accurate to point the finger at Sununu, Brady, and Keating. Some would call it an unholy alliance. I say it is a marriage made in heaven.

Charles Keating, the most notorious of the savings and loan wreckers, vented his ire at Seidman in a National Press Club speech containing more vitriol than fact, and John Sununu, the White House chief of staff, personally leaked stories that Seidman was on the way out. Treasury Secretary Nicholas Brady, working behind the scenes, is probably the most effective member of the trio.

I believe President George Bush when he says he likes and respects Seidman, believes he is doing a good job, and would like him to stay in the administration as a roving ambassador on world debt problems after he leaves the FDIC.

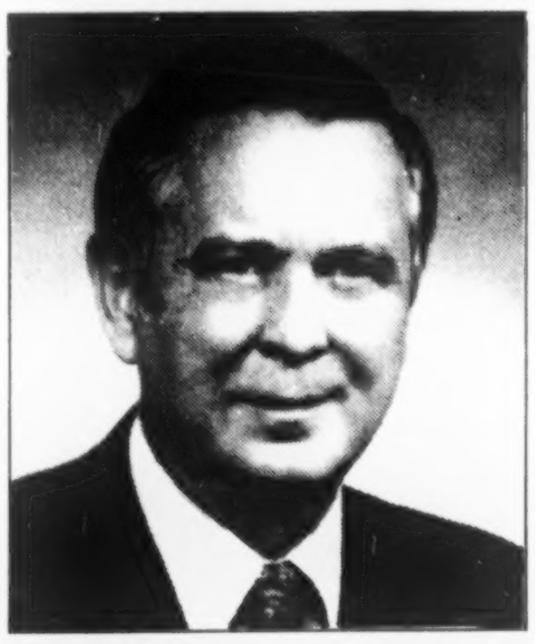
So what happens now? My guess is that Seidman will run the show until he is good and ready to leave. Earlier, he had planned to make major advances on the cleanup by the end of June and then transfer the reins in an orderly manner. But you don't push a fighter like Seidman around. The insider maneuvering to get rid of him was about as inept as any I've witnessed.

High Price for 'Team Players'

Sununu and Brady have been on an unending search for "team players" for the cleanup. Team players, of course, are those who will unquestionably follow orders – right or wrong – and who will spout the party line, whether or not they believe it to be true.

In this process of attempting to stock their shelves with team players, they have driven away qualified people, slowing down the process and adding to the cost to the taxpayers.

Dan Kearney quit as president of the RTC in frustration. Fred Wolf declined to be a player when he learned the ground rules. Finally they selected Timothy Ryan as head of the Office of Thrift Supervision, the successor to the old Danny Wall outfit. He has impeccable credentials in the political arena and absolutely no experience in the liquidation field – and liquidation is what it is all about. The White House chief of staff should be very comfortable with him.



Irvine Sprague
Former FDIC chairman

> **"My guess is that Seidman will run the show until he is good and ready to leave."**

Amateurs Run the Show

One recurring problem is that the RTC Oversight Board, which is supposed to set overall policy, consists of cabinet members who are well-intentioned people busy with their primary jobs. They turn over the operation to inexperienced amateurs in the Treasury Department. The actual work is done by the RTC at the FDIC.

Do we need an RTC Oversight Board? Do we need an RTC? It is a management nightmare. I am opposed to any more legislation about the cleanup right now; but when the time comes, the first priority should be to eliminate these impediments and unleash the FDIC to do the job. Fifty years of successful experience should count for something.

The one bright spot in the picture is the House oversight committee that is charged with keeping watch over the RTC. When I testified before the committee recently, I was pleasantly surprised. They asked all the right questions. With people like Chairman Bruce Vento, Jim Leach, and Charlie Schumer on the job it will make it more difficult for the RTC politicians to cause trouble.

With the FDIC chairmanship so much in the news, it will be useful to look at the past, which, after all, is prologue.

The Selection Process

First, a candidate invariably is sponsored either by the President or by a powerful figure who is willing to push for the appointment. Second, once confirmed by the Senate, the chairman cannot be removed short of impeachment. There are no impeachment precedents. I suppose it would take something as bad as trading arms to Iran in exchange for hostages.

Third, although the term of office as FDIC chairman is six years, it can now be extended indefinitely until a successor is qualified. I'm not certain whether qualified means confirmed by the Senate or actually sworn in. Finally, the 1989 law states that the President must designate a chairman and vice chairman. If the chairman leaves, the vice chairman becomes acting chairman. A complication today is that there is no vice chairman,

FUNNY MONEY/*By Tom Leander*

Caught in Flagrante

Even the guys with the white hats can run into trouble shipping big bundles of cash, in this era of drug lords and money laundering.

A courier for The Federal Reserve Bank of Dallas nearly got busted last week when he made what the agency considered a routine pickup of $25 million.

According to the *Dallas Times Herald*, the courier briefly became a criminal suspect after police got a tip that he was at Dallas-Fort Worth International Airport to pick up a fortune in legal tender. The tipster said, accurately enough, that the cash was arriving from San Antonio in the cargo hold of an American Airlines jet.

When the startled courier was accosted by federal agents and local police, he was unable to produce documents showing where he got the money – or where it was going. He was released only after Federal Reserve officials at both ends of the route vouched for his bona fides.

Fed officials insisted that big shipments of cash are a routine matter for the guardian of the nation's liquidity. But law enforcement agents disagreed.

"It was unusual that they would put that kind of money in the belly of an airplane," said Daniel West, an officer with the Drug Enforcement Agency.

No One Is Immune

Call it a real-life lesson about real estate woes in the Northeast.

Joseph Hu, head of mortgage research at Nomura Securities International, recently sought to refinance his home, a co-op in New York's fashionable Brooklyn Heights section. Mr. Hu found to his surprise that the appraised value of the property was 20% lower than what he paid for it five years ago.

Joseph Hu

Mr. Hu related the incident to lend a personal touch to a speech he gave to the Mortgage Bankers Association of America in New York this week. Mr. Hu's distress evoked spirited, if slightly jaded, laughter from an audience packed with colleagues.

Score One for Bush

Neil Bush, the President's son, knew he would be facing a hostile congressional panel when he was called to testify Wednesday about his involvement in the failed Silverado Banking, Savings and Loan Association.

Alluding to the hostile reception that his mother, First Lady Barbara Bush, is likely to get as this year's commencement speaker at Wellesley College, Mr. Bush told the press he would gladly trade places with his mother.

In testimony, Mr. Bush denied any wrongdoing in his role as an outside director of Silverado.

Saving Our Pennies

Now that the penny postcard costs 15 cents and penny candies cost at least a nickel, how much credibility could be left to the old saw, "a penny saved is a penny earned"?

Regardless of its diminishing buying power, a Gallup survey released this week revealed that 62% of Americans favor saving the penny from extinction.

Congress is considering legislation that would eliminate the penny. If it passes, merchants would be required to round cash transactions to the nearest nickel.

Why the loyalty to the penny? Survey findings show that 92% of respondents agreed with the statement: "The penny is a longstanding tradition in this country."

A Precious Asset

An analyst from San Francisco-based Montgomery Securities, in cahoots with her husband, parodied one of the standard formulas of financial advertising to announce a highly personal acquisition on April 22.

"Kathleen Smythe de Urqieta and Bernardo Urquieta have acquired Bernardo Charles Smythe Urquieta III, 8 lbs., 14 oz.," read a 5-inch by 5-inch card mailed to business associates and reporters.

In fine print, the couple noted proudly that Montgomery Securities "acted as adviser for this initial public offering." ☐

SMALL BUSINESS

Banks Using PC Software To Attract New Accounts

By LAURYN FRANZONI
Special to the American Banker

The personal computer has already changed the way many business owners manage their enterprises. Now, banks can use software packages and communications to open doors with small-business clients and retain their accounts.

Computer links between banks and small companies have "changed our way of doing business," says Michael R. Hinton, executive vice president for marketing and deposit services at Old National Bancorp., Evansville, Ind. "Our commercial customers would tell you that they would not leave us for a bank that didn't offer this system."

The system he is talking about is the InTouch Cash Manager, licensed and operated by Harbinger Computer Services, Atlanta. InTouch combines a personal-computer software program and communications network that allows a small-business owner to communicate easily with a bank.

InTouch lets customers obtain bank balances and transaction records, move funds between accounts and to other financial institutions, automatically store the data on the PC, generate cash-flow reports, reconcile bank accounts, produce bank statements on demand. Other features include check writing, scheduling, and access to a variety of national information services.

Bankers say each customer buys the program for a different piece of the service.

"Our commercial customers would not leave us for a bank that didn't offer this system."

Michael R. Hinton
Old National Bancorp.

The bank's customers dial a toll-free number in Harbinger's EDI network. Once the bank link is established, the system quickly downloads the account information to the customer's PC. Then the menu-driven software takes over; no transmission charges are incurred.

First of America Corp. in Kalamazoo, Mich., is offering Intouch. In announcing the decision to do so, the bank's vice president, Bruce McCall, said:

"The strategic importance of the corporate market to our banks is clear. The InTouch Cash Manager is specifically designed to fulfill the cash management needs of this key market and does so at a price even the smallest corporation can afford."

Typically, a bank pays a one-time installation or license fee for the Harbinger product. That fee may vary according to the degree of exclusivity and other factors.

The bank then buys customer software packages from Harbinger. They can be resold at any price; some are selling the package below cost for competitive reasons, while others add a substantial premium. There are also monthly transaction fees.

Individual Fees as High as $140 a Month

The affordability and the variety of features have let sales representatives at Old National Bank, an $850 million-asset institution, close eight of every 10 proposed deals, Mr. Hinton says. In six months he has put 70 customers on-line. The customers pay an average of $60 per month in transaction fees to the bank; individual fees range from $30 to $140.

"The fee income is a big advantage," Mr. Hinton says. "But the most important advantage is the increased balances we see on all of the InTouch accounts."

"The product is a balance generator," says Jill Rushing, vice president and manager of the corporate products group at the $4.6 billion-asset Deposit Guaranty National Bank, Jackson, Miss. She says sales of the product to "100% prospect" customers (those without any relationship to her bank) have exceeded expectations.

"Many of our credit officers can sell the product as well as the sales force I have in place, mostly because it's so much fun to sell," she says. Because of the gratifying fee income and affordability of InTouch, Mr. Hinton says, he has dedicated two sales people and one customer-service person to the product.

Marine Midland Bank, Buffalo, N.Y., uses the InTouch software to "open doors," according to department executive Carl Lashua.

According to a survey recently conducted by Trans Data Corp., an *American Banker* affiliate, one-fifth of banks and thrifts now offer some form of computerized banking service to the small-business market. An additional 9% expected to add such service this year.

Regional differences were evident. Nearly one-third of Southern institutions offer computerized banking services to small businesses, while only 11% of New England institutions and 12% in the Middle Atlantic region do.

Among other banks offering InTouch Cash Manager are Wells Fargo Bank, San Francisco; National City Bank, Cleveland; First National Bank of Atlanta; Deposit Guaranty; Illinois National Bank, Springfield; United Bank of Illinois, Rockford; First Trust, Kankakee; Bank Midwest, Bloomington, Ind.; Dekalb (Ill.) Bank; and Merchants National Bank, Terre Haute, Ind.

Dial-Up Banking Is Catching On

Institutions Enter Next Phase of Electronic Revolution

By ELLEN MEMMELAAR

NEW YORK — Consumers are eager to bank by phone, and financial institutions are rising to the occasion, a study commissioned by the International Business Machines Corp. shows.

Of 1,001 U.S. adults in the poll, 64% said such services would make banking more convenient.

That included 81% of people under age 35. By comparison, only 45% of those over 65 feel that telephone banking offers added convenience, according to the survey conducted in April and May by ICR Survey Research Group.

When ICR polled 250 vice presidents of retail banking operations to determine if their institutions offered banking by phone, 37% said they provide the service and 8% said they are planning to introduce it within two years.

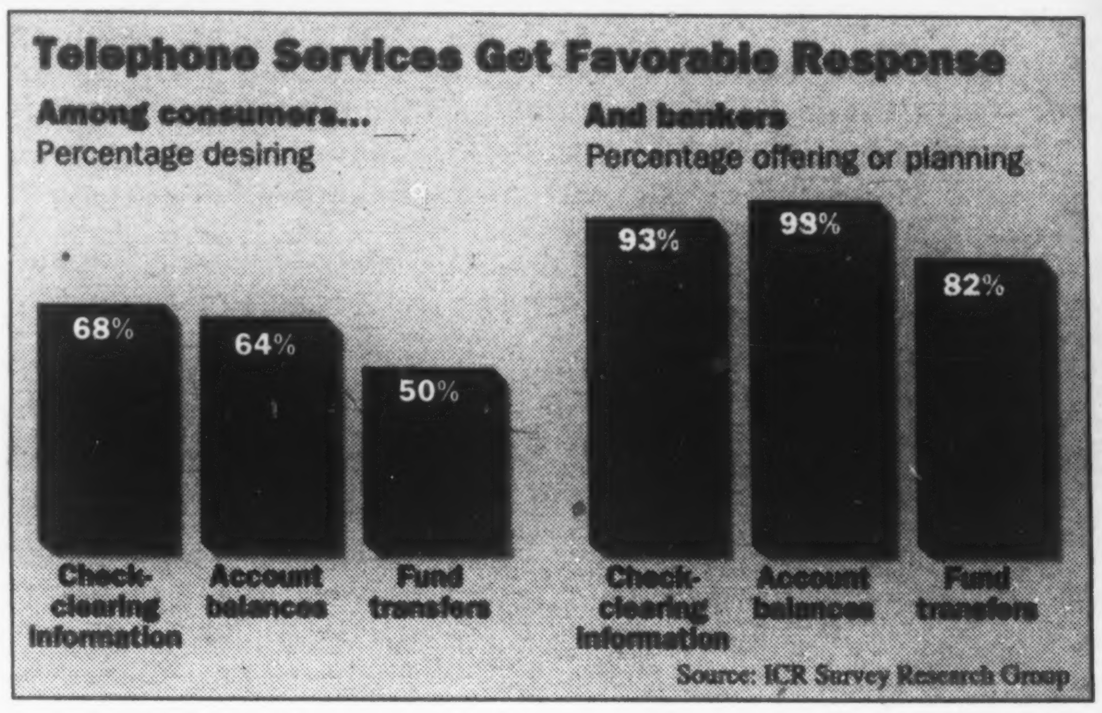
Cost of Human Capital

Large banks are currently the major suppliers of such services, and banks with assets of at least $100 million will account for most future growth, the study concluded.

"These banks are more conscious of the cost of human capital," said Donald Crosbie, vice president of marketing at InterVoice Inc., Dallas. Because larger institutions usually have a well-defined customer service area, they can see the effect that such a system has on the bottom line easier than can smaller banks "where everybody answers the phone," he said.

Banks with at least two locations, or 42% of the total, offer the service, while 28% of those with just one location have teleservicing functions.

"We saw [telephone banking] as a value-added service for our customer base," said Brenda Hellams, a spokeswoman for South Carolina National Bank, which recently installed a telephone-response system created by InterVoice.



Source: ICR Survey Research Group

Voice-Activated System

The service, which is part of the bank's Flex Banking package, is both voice activated and touch-tone driven. Consumers can access savings, checking, and credit card accounts, make installment and home equity loan payments, and get interest rate information. They also can retrieve updates on automated teller machine and debit card transactions.

More and more financial institutions are looking at banking by phone, not only as a customer convenience, but also as a way to cut costs.

More and more financial institutions are looking at banking by phone, not only as a customer convenience, but also as a way to cut costs, the study found.

The payback from such a system usually takes six to 12 months, said Mr. Crosbie. NCNB National Bank, the principal subsidiary of NCNB Corp., Charlotte, N.C., recently claimed a 2½-month payback, he said.

Three-fourths of institution officials said that improving customer service was a motivation for adding the service, while 40% said they expected greater efficiencies. Twenty-two percent said telephone banking facilities lowered in-branch traffic, and 20% said the move freed personnel for other duties.

Appeal to High-Income Users

Higher-income consumers are most receptive to banking by phone. Fifty-five percent of those from households with annual incomes under $15,000 find the voice-response systems convenient, while 76% of those earning more than $50,000 are willing to use such a system.

Nearly seven in 10 consumer respondents said they would use such a system to see whether checks had cleared, and 61% would like to check their balances. Fifty percent said they would use a phone system to make account transfers.

Paying bills by telephone appealed to 40% of the sample, while 34% would use the system to apply for loans. □

Data sources: American Banker questionnaire sent to the 400 largest thrifts in the nation. In addition, federal regulatory data were used. The providers of these data were: **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York; and **W.C. Ferguson & Co.,** Irving, Tex. Data for state-chartered BIF-insured thrifts are from the Reports of Condition and Income submitted to the FDIC; and data for SAIF-insured thrifts and federally-chartered FDIC-insured savings banks are from the Quarterly Financial Report submitted to the Office of Thrift Supervision. **Net Income:** (1) for the BIF-insured thrifts its income after taxes but before extraordinary items; (2) for the SAIF-insured thrifts its the sum of current net income for each of the four quarters of 1989 and 1988, respectively. **( )**— Indicates a net loss for 1988. **ROA:** is net income divided by total average assets as calculated by **Sheshunoff, Ferguson**, or American Banker. **(1)**— A SAIF-insured thrift. **(2)**— A BIF-insured savings bank. **(3)**— The 1988 data were for the top 100 earners that year. **(4)**— Data were taken from the **News**, published by the **Office of Thrift Supervision,** except the returns on assets which were calculated by American Banker. **(5)**— Data are for state-chartered savings banks. The 1989 data are from **Sheshunoff.** The 1988 data are from the **Federal Deposit Insurance Corp.** The ROAs were calculated by American Banker. **(a)**— Combined regulatory data for the thrift and its division in Centerreach, N.Y. **Compiled by American Banker, Copyright 1990.**

Despite Bailout, Profits Sank at Nation's Healthiest Thrifts

ontinued from *page* 1

erbert Sandler, chief executive Oakland, Calif.-based World vings.

Peter Treadway, an analyst at nith Barney, Harris Upham & ., says major thrifts face the ssibility of additional credit ality problems because com- ercial real estate markets re- ain weak. Also, the bailout law s saddled the thrifts with high- premiums for deposit insur- ce and lower dividends on ck in the Federal Home Loan nk System.

"The theory of the rich getting her and the poor getting poor- is turning out to be imper- t," Mr. Treadway said. "The h are only getting a little rich- but the poor are certainly lding up their end of the al."

Red Ink in Profusion

Indeed, the combined deficit the three thrifts with the larg- losses last year exceeded all profits of the 100 biggest ners. As a result of such pro- e red ink, the entire thrift in- stry lost over $19 billion in 39, a record amount.

Some of the industry's peren- l stars also tasted humble pie. verly Hills, Calif.-based Great stern Bank – the No. 1 earner 1989 – fell to No. 7 this year, r posting a $77 million loss the fourth quarter. That was sed by souring loans on com- rcial real estate.

'Good Bank' Makes Good

rvine, Calif.-based American ings Bank, the "good bank" the now defunct American ings and Loan Association, denly became the No. 1 earn- with $216 million in net in- ne. But this thrift, purchased the Robert M. Bass Group in 8 in a government-assisted l, has an edge over others en it comes to net income: It s no income tax.

ourth-ranked First Gibraltar k, purchased in 1988 by an estor group headed by Ron- O. Perlman, is also a special . "American and Gibraltar anomalies, because they are g subsidized by the federal ernment," said Jonathan dley, managing director of guson & Co. in Irving, Tex.

ome Savings of America, Ir- dale, Calif., was the top earn- if American is excluded. me, a unit of H.F. Ahmanson o., had previously been trad- the top spot with Great tern.

or many of the top 100 earn- profits were squeezed in the part of 1989 by a rise in ding costs relative to asset ds.

Capital Considerations

addition, the thrifts were g to meet toughened capital irements, often by shrink- assets. "Some of the top ers had to scramble a bit to t capital requirements," said Ely, the Alexandria, Va.- d consultant.

his year, executives and ana- say, performance is picking mong the major thrifts. Net rest margins have improved a drop in interest rates dur- he latter part of 1989, and ts are making headway in cing their overhead ex- es, said Gary Gordon, an yst at PaineWebber Inc.

"The first quarter was an excellent quarter," said Mr. Treadway of Smith Barney.

Great Western, the main unit of Great Western Financial Corp., saw its first-quarter net income surge 30% to $74.2 million. Home's net soared 58% to $62 million.

Prices Have Stabilized

Experts say that price competition on loans and deposits has stabilized somewhat, as troubled and desperate thrifts have left the market. But thrifts are keeping a close eye on commercial banks, which boosted mortgage originations 20% last year even as the overall market declined.

"The banks are coming into our backyards," James Montgomery, chairman and chief executive of Great Western, told a recent conference of the North Carolina League of Savings Institutions. "They've discovered that the single-family mortgage loan is what they want to do."

Great Western is trying to boost profits by becoming more banklike in its liability structure. It recently launched an advertizing blitz to promote checking accounts – a move aimed at reducing reliance on higher-cost certificates of deposit.

Banks are "going to come after us on the asset side," Mr. Montgomery said. "I think we ought to go after them on the liability side."

Home Savings is expecting a marked improvement in its earnings this year because of an expanded asset base, improved spreads of asset yields over funding costs, and increased efficiency. "You don't have to do any more than that," said Richard Deihl, chairman and chief executive of Home.

Mr. Gordon of PaineWebber predicts that Home's profits will hit $260 million for 1990, up 35% from last year.

Mr. Deihl maintains that many of the industry's top earners should see increasing profits in the future. He added that core earnings, which exclude profits from loan sales, are making up a greater and greater portion of total earnings at Home and elsewhere. "I've never been more optimistic about the future," he said.

As for the push by commercial banks into home mortgages, Mr. Deihl professed to be unfazed. "Bank competition doesn't scare me," he said.

American Banker also identified the 100 most profitable thrifts in the nation – regardless of the absolute size of their net income – by the return on average assets for 1989.

Based on this measure, the nation's most profitable thrift last year was Capitol Federal Bank for Savings, Chicago, with an ROA of 9.61%. The $43 million-asset thrift reported a net profit of $3.6 million last year, up from a loss of $84,000 in 1988. □

Bank training made easy!

Bank Security Desk Reference, Second Edition Richard F. Cross

Newly revised and updated, **Bank Security Desk Reference, Second Edition** offers valuable guidance to help you organize and implement a sound security program for your institution…and ensure compliance with all government regulations, including the Bank Protection Act, Bank Secrecy Act, SEC Rules, Consumer Credit Protection Act, and Money Laundering Control Act.

Bank Security Desk Reference covers all aspects of bank security, including physical and personnel security…investigations…computer and data security…ATM security… safe deposit security…employee training…white collar crime…and emergency planning. Plus, it shows you how to meet all legal requirements and specifies not only what your legal responsibilities are, but how to implement procedures to comply with the law, and avoid penalties for non-compliance. **$84.00**

Bank Employee's Security Handbook, Revised Edition
Donald R. German and Joan W. German

The **Bank Employee's Security Handbook** helps you comply with the Bank Protection Act by offering an inexpensive, yet proven effective training program that your employees can put to use immediately.

Used alone or in conjunction with formal training programs, for groups or individuals, the **Handbook** supplies readily accessible, easy-to-read, common sense instructions on how to deal with every aspect of bank security: cashing checks…safeguarding cash…armed robbery…check forging …kiting…credit card fraud…electronic funds transfer…customer security…audit procedures…vault security and timelocking procedures…bomb threats…confidence schemes and fraud… embezzling…kidnapping…and extortion. **$64.00**

Bank Teller's Handbook, Donald R. German and Joan W. German

This clear and concise guide answers the critical need of bank management for an excellent training tool that improves teller performance, reduces costly turnover, and saves supervisory time. Your tellers will appreciate the no-nonsense approach of a manual that explains the importance of their job in meaningful terms, including: ■the elements of success ■basic mathematics and operations of banking ■on-target customer relations pointers ■various bank services and how they operate ■a wide variety of security situations.

This highly readable **Handbook** reflects the years of banking experience of author Joan German, who has contact with thousands of tellers and bank managers across the country. **$36.00**

Bank Teller's Report

A timely training tool for bank tellers, this monthly newsletter motivates your tellers with practical pointers on all phases of banking from cross-selling bank products and services to banking operations, money-handling techniques and customer relations. **Bank Teller's Report** offers helpful hints and features comments and stories that get tellers involved in their work. Your tellers will look forward every month to a newsletter that: ■boosts teller morale ■continually trains tellers easily and effectively ■gives tellers valuable tips on all aspects of banking ■keeps tellers up-to-date on the latest banking developments.
One-year subscription/12 issues **$85.00**

	Total 1989 losses of the 50 largest losers	**($16.5 bil.)**	
	1,255 of the 3,556 thrifts operating during 1989 lost†	**($24.7 bil.)**	
	2,301 of the 3,556 thrifts operating during 1989 earned†	**$5.6 bil.**	
	Consolidated net losses of the thrift industry§	**($19.1 bil.)**	

Data sources: American Banker questionnaire sent to the 400 largest thrifts in the nation. In addition, federal regulatory data were used. The providers of these data were: **Sheshunoff Information Services Inc.,** Austin Texas; and **ADP Data Services Division,** New York; and **W.C. Ferguson & Co.,** Irving, Tex. Some institutions seized by the federal regulators were issued new titles and new charters. To obtain the total 1989 loss for these institutions, the losses incurred before seizure were added to the losses incurred after seizure. These amounts are reported in the notes below. (1)— Acquired by NCNB Texas National Bank, Dallas, 10/89. Changed title from University Savings Assn., 5/89. Lost $1,250 million under its former title and $78 million under its latter title. (2)— Seized by the federal regulators on 6/14/89. Prior to seizure it lost $100 million, and since seizure it lost $1,061 million. (3)— City Federal Savings Bank, Bedminster, was seized 12/8/89. Prior to seizure it lost $236 million, and since seizure it lost $885 million. (4)— Seized on 1/24/90 and placed in the RTC conservatorship program. (5)— Lincoln S&L Assn., Irvine, was seized 4/14/89. Prior to seizure it lost $841 million, and since seizure it lost $188 million. (6)— Formerly Atlantic Financial Federal. It was placed in the RTC conservatorship program in 1/90. (7)— Gibraltar Savings, Beverly Hills was seized 3/31/89. Prior to seizure it lost $435 million, and since seizure it lost $46 million. Also included in the 1989 loss total are the losses posted by Gibraltar's Washington-based thrift subsidiary. Prior to its seizure in 0/89, Gibraltar Savings, FA, Bellevue, lost $21 million, and since its seizure the new Gibraltar Savings Bank, FSB, Seattle has lost $3.7 million. (8)— Acquired by Meridian Bank, Reading, Pa., on 10/14/89. (9)— First Savings of Arkansas was seized on 2/10/89. Prior to seizure it lost $252 million, and since seizure it lost $221 million. (10)— Seized by the regulators on 2/10/89 and acquired by Bank One Texas NA on 2/3/90. (11)— Midwest Federal S&LA was seized on 2/13/89. Prior to seizure it lost $266 million, and since seizure it lost $131 million. (12)— Peoples Heritage Federal S&LA was seized on 8/10/89. Prior to seizure it lost $213 million, and since seizure it lost $180 million. (13)— Placed in RTC conservatorship 1/90. (14)— Seized 2/7/89. (15)— Seized 3/2/89. (16)— Seized and placed into RTC conservatorship on 2/23/90. (17)— Southwest S&LA was seized on 2/17/89. Prior to seizure it lost $52 million, and since seizure it lost $214 million. (18)— Caprock S&LA was seized 8/1/89. Prior to seizure it lost $58 million, and since seizure it lost $182 million. (19)— Commonwealth SA was seized on 3/9/89. Prior to seizure it lost $88 million, and since seizure it lost $139 million. (20)— In April 1990 Chase Manhattan Bank NA, New York, purchased certain assets and assume certain liabilities. (21)— Seized on 6/14/89. (22)— Seized on 6/14/89. (23)— San Antonio SA was seized on 3/2/89. Prior to seizure it lost $109 million, and since seizure it lost $59 million. (24)— Sandia Federal S&LA was seized on 2/10/89. Prior to seizure it lost $99 million, and since seizure it lost $56 million. (25)— Seized on 2/17/89. (26)— Seized 3/9/89. (27)— Great Southern FSB was seized on 6/22/89. Prior to seizure it lost $115 million, and since seizure it lost $13 million. (28)— Sooner Federal S&LA Was seized on 11/16/89. Prior to seizure it lost $119 million, and since seizure it lost $1.8 million. (29)— Seized and placed into RTC conservatorship on 3/2/90. (30)— Valley Federal S&LA was seized on 10/19/89. Prior to seizure it lost $59 million, and since seizure it lost $52 million. (31)— Royal Palm Savings Bank was seized on 3/16/89. Prior to seizure it lost $57 million, and since seizure it lost $54 million. (32)— Unifirst Bank for Savings, FA, was seized on 8/10/89. Prior to seizure it lost $48 million, and since seizure it lost $56 million. (33)— Seized on 4/5/89. (34)— Seized on 3/16/89. (‡)— Final restated loss. (†)— Of the 3,082 SAIF-insured thrifts operating during 1989, 1,157 lost $23.4 billion, and 1,925 earned $4.4 bil. And of the 474 state-chartered savings banks operating during 1989, 98 lost $1.3 billion, and 376 earned $1.2 billion. Aggregate data on SAIF-insured thrifts are from **Sheshunoff,** and the aggregate data on state-chartered BIF-insured thrifts are from **Ferguson.** (§)— According to **Sheshunoff** all SAIF-insured thrifts operating during the year (2,878 remained at yearend 1989, according to **OTS**) lost $19 billion in 1989 and all BIF-insured state chartered thrifts (469 remained at yearend, according to the **FDIC**) lost $130.8 million.

Data Sources: Data are for all federally-insured savings banks and savings and loan associations snd were compiled from federal regulatory data provided by **W.C. Ferguson & Co.**, Irving, Tex. Data for BIF-insured thrifts are from the Reports of Condition and Income submitted to the FDIC; and data for SAIF-insured thrifts and federally-chartered FDIC-insured savings banks are from the Quarterly Financial Report submitted to the Office of Thrift Supervision. **Rank 1989:** Profitability rank based on 1989 ROA. When two or more thrift have the same ROA, they are listed in order of their net income for 1989, with the thrift earning the larger, absolute amount receiving the higher rank number. **Net Income:** (1) for the BIF-insured thrifts its income after taxes but before extraordinary items; (2) for the SAIF-insured thrifts its the sum of current net income for each of the four quarters of 1989 and 1988, respectively. **ROA:** is net income divided by total average assets as calculated by **Ferguson**. (1)— A SAIF-insured thrift. (2)— A BIF-insured, state chartered savings bank.

Data Source: Federal regulatory data provided by **W.C. Ferguson & Co.,** Irving, Tex. from its data bases of SAIF-insured thrifts and BIF-insured state chartered savings banks. **ROA:** is net income divided by total average assets as calculated by **Ferguson**. **Return on Capital:** is net income divided by average capital. For SAIF-insured insured thrifts, the return on average estimated GAAP (generally accepted accounting principles) capital is used. For BIF-insured thrifts it is the return on average equity capital. **Int. Earn. Assets-to-Liabilities:** is the ratio of interest earning assets to interest bearing liabilities expressed as a percentage. **Spread:** For SAIF insured thrifts, the spread is the yield on earning assets minus the cost of funds. For BIF-insured thrifts, the net interest margin is shown. The margin is net interest income divided by average earning assets. **(1)**— A SAIF-insured thrift. **(2)**— A BIF-insured, state chartered savings bank.

Franklin Failure Was Engineered By Regulators

By SANFORD ROSE

Will Ernie Fleischer win the battle but lose the war?

The chairman of Franklin Savings Association, the $11 billion Kansas thrift placed into conservatorship earlier this year, is suing to regain control of his institution. As is now well known, the Office of Thrift Supervision charged that Franklin should have booked some futures losses that it elected to defer. And, if booked currently, these losses would trigger a bond-indenture clause that would require Franklin to buy zero-coupon Treasury bonds with which to retire or "defease" its zero-coupon mortgage-backed liability bonds.

ANALYSIS: *Follow-up on the news*

The combination of the losses sustained in purchasing the zero-coupon Treasuries and those on the futures contracts would all but wipe out Franklin's book capital, pushing the institution into insolvency.

It now appears that the OTS acted improperly in throwing Franklin into conservatorship on the aforementioned grounds. But even if Fleischer is successful in persuading a court of law that this is in fact the case, his troubles will be far from over.

The government is now amassing evidence that Franklin is actually insolvent in a market-value sense. This evidence is, as this article will try to show, based on highly tenuous and questionable assumptions.

No Automatic Defeasance

But let us first discuss the impropriety of the OTS's decision to place Franklin into conservatorship. Though the regulators coupled the futures loss with that from bond defeasance, in point of fact the one need not have led to the other.

The mere fact that the regulators demanded that Franklin recognize currently its deferred futures losses would not have automatically triggered the bond-defeasance clause. Suppose that instead of placing Franklin in conservatorship, the OTS had confined itself to the demand for immediate futures loss recognition.

Franklin would have contested this demand, as is its right. And, as the *American Banker* article of March 5 points out, the institution had a good case that its prior accounting procedures were in conformity with GAAP.

While this dispute was being adjudicated, Franklin would have gone to the trustee and pro-

Big California Banks Said To Be Mulling Gibraltar Bid

By TERESA CARSON

LOS ANGELES — BankAmerica Corp., Security Pacific Corp., and Wells Fargo & Co. are among 11 potential bidders studying the books of Gibraltar Savings, the largest California thrift seized by the government, sources said.

Gibraltar's drawing card is its 83-branch network, mostly in Southern California. The thrift, based in Simi Valley, a Los Angeles suburb, has $7.4 billion in assets and $5.7 billion in deposits.

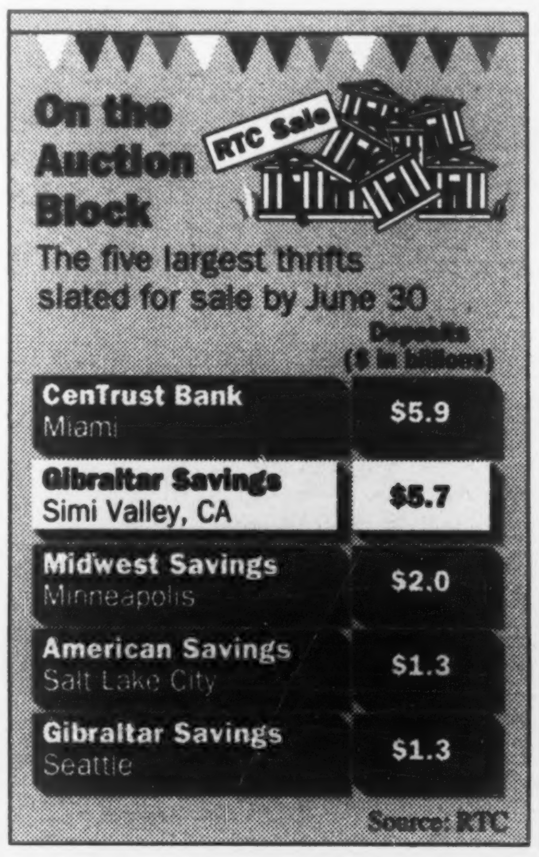
Bids on the thrift are due by June 10, said sources familiar with the proceedings.

Sale Due by June 30

Gibraltar is the second-largest of 11 thrifts the Resolution Trust Corp. has said it will sell by June 30. The largest is CenTrust Bank, Miami, with $5.9 billion in deposits.

The sources said that 11 potential buyers have inspected Gibraltar's financial records and that five others have expressed interest. It is unclear how many will actually submit bids.

Large financial institutions that already operate in California will have an edge in the bidding. Investment bankers say these institutions can wring cost savings out of the operations that out-of-state bidders or investor groups cannot.



On the Auction Block
RTC Sale
The five largest thrifts slated for sale by June 30

	Deposits ($ in billions)
CenTrust Bank Miami	$5.9
Gibraltar Savings Simi Valley, CA	$5.7
Midwest Savings Minneapolis	$2.0
American Savings Salt Lake City	$1.3
Gibraltar Savings Seattle	$1.3

Source: RTC

BankAmerica, Security Pacific, and Wells declined to comment. Phone calls to the RTC were not returned.

Gibraltar was put into conservatorship on March 31, 1989, and into receivership on October 31, 1989.

At yearend 1989, Gibraltar Savings had $7 billion in deposits, making it the largest California thrift in conservatorship. The next largest, Imperial Savings Association, San Diego, had

Agent Banks Forced to Restructure Revlon Loan

By STEVEN LIPIN

NEW YORK — Barely a month into syndication, a $1.8 billion refinancing of the Revlon Group's bank loans is being restructured, the latest victim of the skittish market for highly leveraged transactions.

The restructuring became necessary, sources said, when the agent banks – the banking units of Chemical Banking Corp., Chase Manhattan Corp., Citicorp, and Manufacturers Hanover Corp. – ran into heavy resistance from prospective lenders.

On Friday, the four agents confirmed that revisions in the deal were being made. In a joint statement, they said: "In order to respond to current market conditions, Revlon and the co-agents are making certain structural and pricing adjustments to the $1.8 billion transaction currently in the marketplace."

However, informed sources said that the revisions will not change the cost of the loan for Revlon. Rather, any changes in fees or pricing will come out of

GE Acquires Rights to Service Huge Portfolio

By STEPHEN KLEEGE

NEW YORK — Making a bold entry into the turbulent world of mortgage servicing, GE Mortgage Capital Corp. said Friday that it had agreed to buy the $12 billion portfolio of Travelers Mortgage Services Inc. from the Travelers Corp.

The companies did not disclose the price. Recent acquisitions of mortgage-servicing rights have cost between 160 and 185 basis points of the portfolio size. On that basis, the Travelers business would cost between $192 million and $222 million.

Industry experts said GE is taking advantage of a dip in the market to acquire one of the nation's largest servicing portfolios at a favorable price.

Officials of GE Mortgage Capital, a General Electric Capital Corp. unit in Raleigh, N.C., said the Travelers acquisition will enable it to provide a more complete service to its thrift and bank customers.

GE Mortgage Capital, known as Gemcap, is parent of GE Cap-

EXIT TRIUMPHANT: A.W. Clausen, who shepherded BankAmerica Corp. through some of its stormiest years, proudly noted that "BankAmerica is back" as he retired last week.

Clausen Exits Triumphantly, Having Salvaged Reputation

By SAM ZUCKERMAN

SAN FRANCISCO — At BankAmerica Corp.'s annual shareholder meeting last Thursday, Richard M. Rosenberg was installed as chairman and chief executive officer, but outgoing chief A.W. Clausen was man of the hour.

Three years ago, just months after he returned for a second tour of duty as BankAmerica chief, Mr. Clausen was booed and hissed by angry stockholders. They had seen their dividends dry up and the value of their holdings tumble as a result of the devastating financial crisis that rocked the company in the mid-1980s.

This time – after a partial restoration of the dividend, recovery of the stock, and record earnings of $1.1 billion in 1989 – a

In Computer Spending, Size Counts

But Small Banks Also Are Increasing Their Outlays

By JEANNE IIDA

SAN DIEGO — Big banks continue to spend much more of their budgets on data processing than small- and medium-sized banks, according to the American Bankers Association's latest national operations and automation survey.

For banks with at least $5 billion in assets, data processing accounted for about 15.3% of operating costs in 1989.

That's a bit less than the 16% calculated in 1986, the last year the ABA conducted its automation survey.

Big Jump for Small Banks

But community banks with under $300 million in assets spent proportionately much less – only 9.9%. That is up, however, from 6.9% in 1986.

Since the previous survey, it was the community banks that changed their approach to technology the most. In addition to boosting their spending on data processing more sharply than big banks, they reduced their reliance on outside processors.

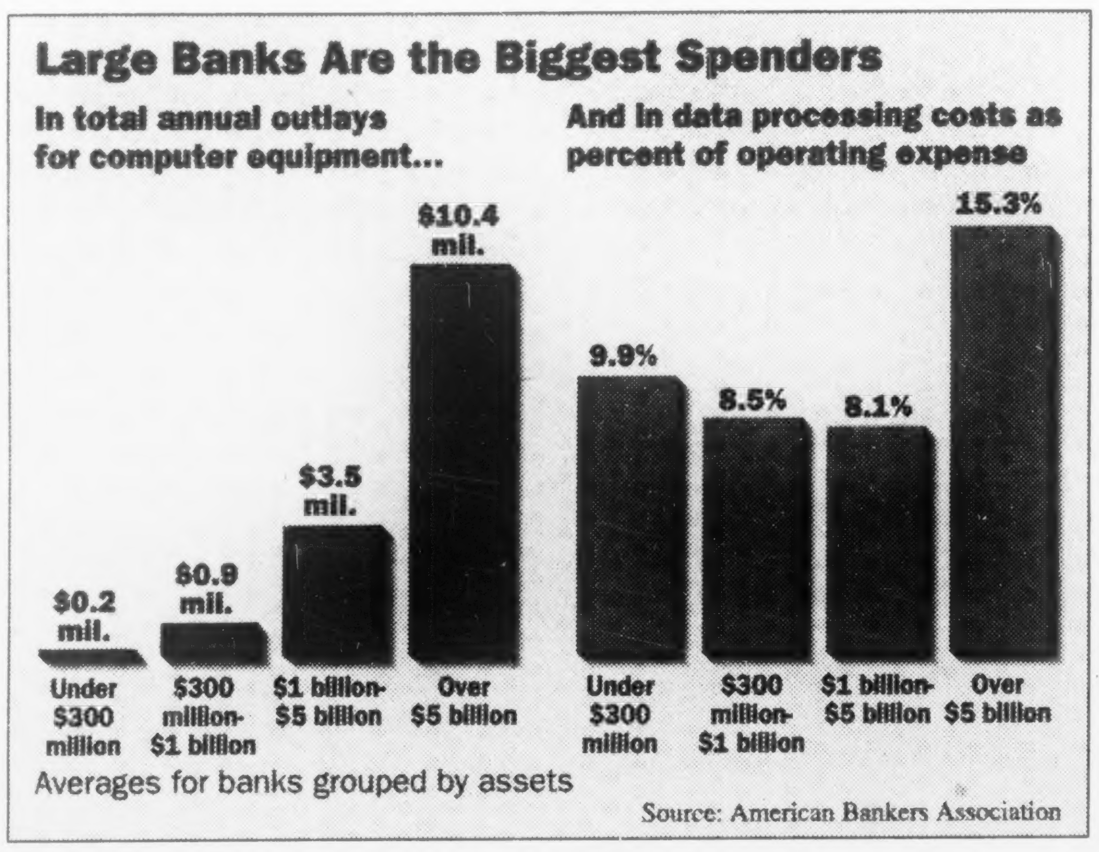
373 Institutions in Survey

The ABA study looked at data processing operations in 373 banks of all sizes.

The association tabulated its results in four categories – community banks, with assets of less than $300 million; medium-sized banks, with assets of between $300 and $999 million; large banks, with assets of $1 billion to $4.99 billion; and very large banks, with assets of at least $5 billion.

PCs Proliferate

The study found that banks, like corporations in other industries, have generally reduced their reliance on large mainframe computers, while minicomputers and personal computers have proliferated.



Large Banks Are the Biggest Spenders

Averages for banks grouped by assets

Source: American Bankers Association

The study also showed that big banks – typically the most dependent on consultants – plan to reduce that dependence sharply over the next two years. Smaller banks plan to keep their use of consultants roughly even.

Moving In-House

Community banks, taking advantage of smaller and cheaper computers, have brought more of their processing in-house. Nearly 58% of community banks did their processing in-house in 1989, up from 42% in 1986. Small banks' use of facilities managers, who are contracted to run computer departments, dropped from 20% in 1986 to 10.4% in 1989.

For data processing consultants, banks with assets of $1 billion to $4.99 billion spent $184,000 on average last year. The average for the smallest banks was $18,000.

Banks with assets of $5 billion or more spent about $366,000 on the consultants.

Telecommunications costs rose for all banks and represented an average 3% of operating budgets. Telephone services, the biggest chunk of the telecommunications total, cost community banks $30,000 on average and the biggest banks about $8 million.

Mainframes Pace Spending

Mainframe computer expenses outstripped expenditures on minicomputers and microcomputers.

Average spending for mainframe equipment ranged from $150,000 at community banks to $7.5 million at the largest banks; the latter projected 1990 increases in mainframe budgets averaging 7.5%.

Personal computers proliferated among institutions of every size; all the very large banks in the survey and about 70% of the community banks were using them last year. Community banks spent about $15,000 annually on PCs, of which they had deployed 12 on average. The largest banks averaged $1.5 million in PC spending and 1,100 machines distributed throughout the institution. □

2 Systems Attract Bankers Beset by Pressure on Profits

By RICHARD LAYNE

In a year marked by the eruption of problem loans and increased pressure on banks to cut costs, it comes as no surprise that two technology themes recurred at the National Operations and Automation Conference in San Diego.

The conference, sponsored by the American Bankers Association, reportedly attracted 4,000 people last week.

Two rapidly emerging technologies – commercial-loan automation systems and image processing – have been the focuses for bankers intent on streamlining operations and better tracking profitability. Never before have bankers been so ready to use automation not just to process transactions but also to monitor and improve business performance.

In loan automation, bankers are buying sophisticated systems that handle some or all steps in lending, from sales calls and credit evaluation through loan review and profitability analysis.

Manual Check Handling

The interest-margin squeeze on commercial loans is not the only pressure bankers feel. Check processing is one of the last bastions of manual operations, with almost 1,000 people in some big banks coding checks in preparation for reading and sorting machines.

New imaging equipment from International Business Machines Corp. and Unisys Corp. could make check processing far more efficient and eliminate many jobs.

Imaging, in the words of one banker, threatens to separate the industry into haves and have-nots. Image-based check processing equipment comes with a high price tag – as much as $40 million.

Some bankers predicted that only the top tier of banks would be able to use imaging technology for check processing. They will sell their capability to the rest of the industry, these bankers said.

IBM System Unveiled

Bankers saw the first public showing of a prototype IBM system designed to automate major aspects of commercial lending by tying together existing software. IBM had previously shown the prototype, which runs on a personal computer, to executives at its invitation-only financial services industry conference two months ago.

> **"Officers Workbench is an attempt to give the loan officer more time with the client."**
>
> **Joseph Filoseta**
> *BancA*

Bill Reid, an IBM manager, said the new system, called Officers Workbench, will be commercially available in six months. He said he hopes soon to find a bank willing to test the new system, which links three software packages.

As do other computer companies, IBM believes an opportunity exists to sell automation to commercial lenders. For IBM, which has had moderate success in selling applications software, the easiest way was to repackage existing software.

COMMENT/*By Paul S. Nadler*

With Junk Bonds' Waning Comes Era of Opportunity

Harry Keefe, the banking analyst and industry guru, has a wry smile on his lips as he reports:

"I sat with this CEO of a major bank that is breaking its chops to get into investment banking. And I said to him, 'You earn about 18% on capital, and there isn't a major investment banker who earns much more than a third of that. What do you want to expand into Wall Street activities again for?' "

An Unpromising Field

This is a real question. Many banks have looked at investment banking and said "no way." Others who have started discount brokerage operations have found the revenue is minuscule relative to the costs and risks involved.

Even the securities industry people who have long opposed the banks' effort to modify or eliminate the Glass-Steagall Act restrictions on their investment banking operations have finally said, "O.K. You can get into investment banking if you help us get back into commercial banking."

To people like Harry Keefe, that sort of trade would definitely benefit the Wall Street people.

The ideas above have been mouthed many times in this space and by many other banking observers. But what makes them even more poignant now is the financial environment we have generated after the junk bond era.

"Junk bonds," or "high-yield fixed-income securities" as their proponents prefer to call them, have had their ups and downs.

First, they were considered the godsend of America's capital-starved smaller companies. Entrepreneurs who could not tap Wall Street's traditional sources of capital found junk bonds, as they were first developed, a way of gaining the investment funds they needed to develop products and markets.

Abuses Crept In

It was only later that the phenomenon became identified with leveraged buyouts, speculating on brokered deposits guaranteed by the Federal Deposit Insurance Corp. or Federal Savings and Loan Insurance Corp., and the circular flow of funds from one junk bond issuer to the investment portfolio of another.

The sad point is that the collapse of the junk bond market due to its later abuse has left these undercapitalized newer and smaller companies without the funding vehicle that did them so much good.

With junk bonds dead or at least seriously sick, nonfinancial companies needing capital will be increasingly dependent on bank financing.

But as with any other dark cloud, the collapse of the junk bond market has its silver lining – and this is for the commercial banks. For with junk bonds dead or at least seriously sick, nonfinancial companies needing capital will be increasingly dependent on bank financing.

And this is just when banks' consolidation and their efforts to attract people capable of handling more complex capital market transactions are making banks more able to offer services competitive in price and quality with those of Wall Street firms.

In sum, the days of disintermediation – when money went directly to the capital and money markets, where it was placed with borrowers who needed capital – are ending. Traditional intermediation – with savers placing funds in banks, which then loan to companies that can no longer use the junk bond market – is back.

What has the decline in the junk bond market got to do with reducing the need for banks to enter investment banking? Plenty.

Institutions Can Act Alone

Banks will be able to handle the capital needs of smaller and newer companies directly, without using investment banking organizations to generate business.

As Henry Kaufman, head of the advisory company that bears his name, has put it: "The financing of mergers and acquisitions and leveraged buyouts will take a new turn. Instead of the plethora of new high-yield bond issues offered through the public market, much more financing will be consummated directly with major financial institutions such as commercial banks and insurance companies."

Instead of having to diversify into a difficult new arena to get capital market business, banks will be able to get this business just by being strong and competent.

In an era of so much bad news about banking, this is a welcome ray of sunshine. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

CRIME BLOTTER/*By Tom Leander*

Restitution Verdict Reversed

In a unanimous decision overturning lower courts, the U.S. Supreme Court has ruled that a credit card cheat need repay only the sum in the charge to which he'd pleaded guilty, not a much larger amount he allegedly stole.

The court said that Frasiel L. Hughey, a former post office worker in San Antonio, did not have to repay $90,431 that he allegedly stole through a credit card scam.

$10,422 or $147,646?

Mr. Hughey convinced the justices that he had pleaded guilty to only one count of making more than $1,000 in unauthorized charges on a card issued by MBank U.S.A., a former subsidiary of Dallas-based MCorp, and that he should have to pay only $10,422 in restitution.

Federal prosecutors said they had evidence that Mr. Hughey stole 21 MBank cards. They said that to persuade him to plead guilty to charges of mail theft and credit card fraud they warned him he might otherwise be ordered to pay the bank $147,646.

$90,431 Compromise Rejected

A federal judge initially sentenced Mr. Hughey to eight years in prison and, in a compromise, reduced the restitution amount to $90,431.

The U.S. Court of Appeals for the Fifth Circuit in Dallas upheld that ruling.

But Justice Thurgood Marshall, writing for the unanimous Supreme Court, said last Thursday that under the Federal Victim and Witness Protection Act of 1982 Mr. Hughey could not be forced to pay more than he admitted, in a plea bargain, to having stolen.

The Court of Appeals upheld the restitution order last year. In urging the Supreme Court to do the same, Justice Department lawyers said that limiting the amount of restitution in the Hughey case would violate Congress' intent to provide adequate compensation to crime victims.

Embezzlement Probe Is On

Federal agents are investigating an embezzlement from Connecticut Bank and Trust Co., according to U.S. Attorney Stanley A. Twardy.

He would not say how much money was taken, which bank office was involved, when the crime occurred, or whether any customer accounts were affected.

Sources close to the investigation said the case could involve as much as $500,000. The bank, a subsidiary of troubled Bank of New England Corp., Boston, would not confirm the amount.

Federal regulators placed Connecticut Bank and Trust under a cease-and-desist order last month, putting the bank under tight supervision, particularly of its lending practices.

Spokesman Richard DeNoia said bank officials discovered the embezzlement recently during internal reviews. Mr. DeNoia said the bank is conducting its own probe in tandem with Mr. Twardy's.

* * *

Cops Beat Taxi to the Suspect

A man who allegedly robbed a Marine Midland Bank office in Syracuse, N.Y., wanted to escape by taxicab but was foiled by a long wait for the cab, officials said.

Erich White, a 21-year-old Syracuse resident, walked into the branch and demanded money from a teller, according to police spokesman Rod Carr. Mr. White allegedly left shortly afterward, carrying an undisclosed amount of cash.

He crossed the street to telephone for a cab, Mr. Carr said. But bank employees had already alerted police, who arrived on the scene at the same time as the taxi.

Mr. White was arrested without incident, Mr. Carr said. No weapons were apparent during the robbery or found on Mr. White, who was charged with third-degree robbery.

* * *

Norwest Branch Scrutinized

Soon after federal agents seized records from a Norwest Bank branch in Great Falls, Mont., on May 18, prosecutors revealed that the bank is being investigated for alleged money-laundering violations.

No charges have been filed against the bank or its officers.

The records pertained to the account of Richard Kurth and his wife, Judith, now serving prison sentences, and five other family members. The Kurths pleaded guilty to drug charges in 1987 after police raided their Great Falls ranch in October of that year and found a marijuana crop and seven gallons of hashish oil.

The investigation of the Norwest Corp. unit stems from allegations by Mr. and Mrs. Kurth that a bank officer urged them to raise marijauna as a cash crop to help pay off $1.3 million in debt on their ranch.

Bank president Frank Shaw declined to discuss the case, but when the Furths were sentenced in 1988 he dismissed the story as preposterous. Interim U.S. Attorney Doris Poppler in Great Falls also declined to comment. ☐

Investors Fear U.S. May Force Dividend Cuts

By JED HOROWITZ

Concern is growing among bankers and investors that regulators may soon force banks to reduce or suspend dividends on stock when earnings or capital are under pressure.

Relatively high quarterly dividends are the glue that keeps many an investor attached to a poorly performing bank stock. In fact, the dividends of companies such as Chemical Banking Corp., Manufacturers Hanover Corp. and Bank of Boston Corp. recently have been yielding between 10% and 11%.

A harder line on dividends, of course, could send prices falling even further, making it even more difficult for banks to raise new equity capital.

ANALYSIS: *Follow-up on the news*

Bank regulators have long had policies prohibiting dividend payments if a bank or holding company is suffering from weak capital or low-quality earnings that threaten future profitability.

Exemptions Once Granted

However, both the Federal Reserve Board and the Office of the Comptroller of the Currency have often winked and nodded – or granted formal exemptions from the law – when banks declared dividends in spite of poor earnings, according to analysts and lawyers.

If a bank was experiencing a short-term setback, the argument went, the last thing it needed was further erosion of shareholder confidence through a dividend cut.

Talk Is About Forced Cuts

In recent months, however, evidence of a change in regulatory attitude has surfaced. Analysts are openly talking about the likelihood of forced cuts in dividend payments at certain money-center banks as well as hard-hit regionals.

Paying out less income in the form of dividends may be mandated by the regulators in the face of deteriorating loan quality and higher risk-based capital requirements, say analysts.

"Regulators are reminding boards of the tougher capital standards they have to face under the 1992 requirements," said Carole Berger, an analyst at C.J. Lawrence Morgan Grenfell. " I expect a significant amount of dividend cuts over the next two years at banks."

Banking lawyers say they are getting anxious calls from bankers about the new attitude. "People are more concerned about

Citicorp's Consumer Banking Network in Europe
Countries where the bank has a sizable number of consumer branches

Citicorp also has a total of 70 branches in Austria, Denmark, Holland, Ireland, Luxembourg, Portugal

Citicorp Driving to Open Network Of 1,000 Branches Across Europe

By JOHN EVANS

LONDON — Citicorp is on the prowl in Europe.

As many U.S. banks continue to retreat from the Continent, Citicorp is bent on acquiring banks and other financial service companies throughout the European Community.

The bank wants to capture about 6% of the European market through a 1,000-strong branch network, outstripping the penetration of Europe's big banks.

Significance Is Increasing

This reflects the commitment "to make Citicorp Europe an increasingly important part of the corporation," said Robert Selander, vice president and chief of staff for the bank's European consumer banking group.

With 700 branches in 11 countries, Citicorp is well on its way toward achieving its goals. It already services more than eight million accounts, equivalent to 3% of all European households. Indeed, Citicorp has as many customers at branches in Europe as it does in its U.S. branches.

"Citicorp will emerge as the most effective, cost-efficient U.S. pan-European banking organization servicing both the wholesale and retail markets," predicted Thomas H. Hanley, managing director and banking analyst at Salomon Brothers Inc., in a recent report.

Court Ruling On Liability May Spook Wary Banks

By STEPHEN KLEEGE

NEW YORK — Already wary of making many new loans, bankers are likely to become even more cautious in the wake of a court ruling broadening the boundaries of lender liability, industry experts said Tuesday.

These experts said that, in deciding late last week against a unit of Fleet/Norstar Financial Group, the 11th U.S. Circuit Court of Appeals in Atlanta ruled in effect that banks were liable for environmental cleanup costs merely because their normal lending relationships put them in a position to make companies take preventive action.

'Completely Paranoid'

"Lenders are already completely paranoid. This is going to heighten the paranoia," said Alan Vollmann, a lawyer at Morrison & Foerster in Washington, who is following the case.

Even as officials of Fleet/Norstar considered their next move – which could include an appeal to the U.S. Supreme Court – experts said the decision is likely to chill lending to certain types of business. It may also spur Congress to consider legislation lim-

BankAmerica Builds Network Of 18,000 PCs

By KAREN GULLO

NEW YORK — BankAmerica Corp. has nearly completed installation of a network of 18,000 personal computers in 1,300 California locations.

The personal computers are part of an ambitious multi-million-dollar program to improve productivity with a system that delivers, to any teller or customer-service representative, information about a customer's entire relationship.

Leader in Movement

The system puts the bank in the forefront of the movement to PCs and away from older-technology terminals that are unable to operate independently of a central computer or controller. PC advocates say the machines will help branches generate sales rather than just process transactions.

Judith Fellheimer Relinquishes A High-Echelon Post at Equibank

By TOM LEANDER

NEW YORK — Judith E. Fellheimer, vice chairman of the Equibank subsidiary of Equimark Corp. and a member of one of the few husband-and-wife management teams in banking, has resigned her post to "pursue other interests," the company announced Tuesday.

Her husband, Allan S. Fellheimer, remains chairman and chief executive officer of Pittsburgh-based Equimark.

Mrs. Fellheimer, who held several posts at Equimark companies since 1984, was a casualty of Equimark's recent failure to complete its planned acquisition of National Bancshares Corporation of Texas, San Antonio, from the Federal Deposit Insurance Corp. As vice chairman of Equibank since February, she was to have had a hand in the Texas operation.

Neither Mrs. Fellheimer nor her husband could be reached for comment Tuesday. Her position will not be filled, according to Claire W. Gargalli, president and chief operating officer of Equimark and chairman of Equibank.

Judith E. Fellheimer
Equibank

"We found ourselves with too many people at the top of the company," said Ms. Gargalli. Mrs. Fellheimer left of her own accord, "in the best interests of

COMMENT/*By William M. Isaac*

Early Intervention Proposal Is a Snake Oil Prescription

For decades to come, students of American financial history will study and debate the 1980s, particularly the destruction of the thrift industry.

They will probably divide, in general, into two camps:

- Those who believe the debacle was primarily a result of the excesses of the private sector and demonstrates the need for further government control.
- Those who believe that government interference with free markets led to the financial meltdown, and that the proper response is to curtail government involvement.

How Government Hurt

Proponents of more intervention would have us ignore the role government played in bringing us the S&L fiasco – restrictions on sensible diversification, controls on deposit and loan interest, utter failure to properly supervise marginal S&Ls, refusal to reform the deposit insurance system.

They would have us rely even more on the government by accepting such notions as narrow banks, market value accounting, early intervention, and credit allocation schemes (including capital standards).

I'm particularly concerned about a proposal advanced by some academics that the asset portfolios of banks and thrifts be marked to market by the government, which would be required to intervene in prescribed ways whenever an institution's "true capital" falls below statutory benchmarks.

Much to my chagrin, this notion has gained some currency in otherwise respectable circles, including among some bankers.

In most ways, the proposal represents nothing new. Bank supervisors have always tried to ascertain the true value of an institution, and they have implemented increasingly severe enforcement actions as net worth has deteriorated.

The Same But Worse

The proposal varies from past and current practice mainly in its rigidity. If capital, marked to market, fell below the benchmarks, certain actions by the regulators would be mandated.

Had such a system been in place during the early 1980s, the Federal Deposit Insurance Corp. would have been required to shut down virtually the entire savings bank industry, as rising interest rates rendered most of it insolvent on a mark-to-market basis. The FDIC would have been needlessly bankrupted several times over.

Mercifully, the academics were not in charge, and the FDIC was able to use judgment.

Insolvent savings banks were merged into stronger institutions with FDIC financial aid. Undercapitalized savings banks that had some prospect of being viable once interest rates declined were allowed to continue in existence, under close scrutiny by FDIC examiners, so long as they did nothing to increase the FDIC's exposure to loss. They were not permitted to grow, lead in interest rate wars, or engage in high-risk activities.

Because the FDIC was not required to mark savings bank portfolios to market in an extremely high rate environment and could exercise discretion on enforcement, it incurred relatively modest losses of $1.5 billion.

Many S&Ls careened out of control during this period and will ultimately cost the government far more than if they had been shut down. Wrongheaded policies and ineffective supervision by the government allowed it to happen. Now the proponents of early intervention want to use that failure to justify granting the government even more authority.

This leads to my next concern about the early intervention proposal. Proponents would mark asset portfolios to market not only on the basis of interest rate movements, but also on the basis of asset quality.

This is just what examiners have been trying to do for decades, but it is more art than science. The process broke down during the 1980s, grossly underestimating the S&L problems. Today, many bankers would argue that examiners are going too far in the other direction, greatly overstating problems.

The answer is not to rely more on the examination process (though I would like to see it improved). The answer is to supplement it by enlisting the support of the market.

The private sector would help control risk if we exposed sophisticated suppliers of funds to the risk of loss.

I favor the plan – endorsed by the Bush Task Group and the American Bankers Association – to require that depositors over the $100,000 insurance limit take some loss whenever any bank fails. I have no doubt the market would be a stern disciplinarian and make life considerably easier for the examiners.

The early intervention plan is snake oil. It might not, by itself, make the patient materially worse, but to the extent it lets people think they have entered effective treatment it could be very bad medicine indeed. ☐

Mr. Isaac was chairman of the Federal Deposit Insurance Corp. from 1981 to 1985. He now heads the Secura Group, a Washington-based consulting firm.

GRAPEVINE/*By Jed Horowitz*

BT Bounces Loan Unit. Bankers Trust Co. is out of the commodities lending business, a spokesman confirmed. The bank, which last year wrote off $105 million of loans to Julian Co., a Memphis cotton merchant, will now lend only to large commodity companies – such as Cargill Inc. – that also buy merchant banking services from it, said Thomas Parisi, the spokesman.

Bankers Trust's seven-person commodities group was led by Richard Marin, who has recently been assigned to head BT Canada, the Canadian bank subsidiary of Bankers Trust New York Corp. Others in the group are being relocated to the financial institutions department and elsewhere.

Mr. Parisi would not comment on links between the Julian incident and the commodities group's demise. Bankers Trust is fielding several lawsuits from parties connected to Julian and also expects to be sued by some fellow lenders for whom it acted as collateral agent. The bank, in turn, is suing Julian's principals. A source close to the bank said, however, that Julian and another case of alleged fraud "led to an investigation not only of these loans but of the whole question as to whether BT should lend to commodities companies."

* * *

Change in Germany. Deutsche Bank A.G. will soon announce a companywide "streamlining," according to analysts and sources close to the German giant. The revamping will in many ways mimic recent functional reorganizations at Manufacturers Hanover Trust Co., Citicorp, and other money-center banking companies.

The reorganization actually began a few months ago in the headquarters staff of the West German bank, the sources said. Some departments were scaled down, and responsibilities of certain executives were shifted.

Analysts who heard a presentation from bank officials last week said the reorganization is now shifting to Deutsche Bank's widespread branch system. The bank plans a functional realignment that will result in a more precise allocation of capital – to the point where internal rates of return are being assigned to small units and even individual loans, analysts said.

Although German labor law makes it difficult to reduce staffs, Deutsche Bank expects to "rationalize electronic and back-office systems" as part of its refined approach to profits, according to one source.

* * *

The Young and the Rested. In two weeks, Morgan Guaranty Trust Co.'s longtime head of foreign exchange trading, Bruno Eberli, will retire to "play golf and tennis, manage my money, and devote time to my family, charities, and other interests." Mr. Eberli, who joined the subsidiary of J.P. Morgan & Co. 15 years ago, is 41.

Meanwhile, at Bankers Trust, an interim head of global trading has been named to replace Jay Pomrenze, the bank's 40-year-old trading wizard, who is taking a one-year leave of absence to study archaeology in Israel. Kelly Doherty, Mr. Pomrenze's deputy and former head of the bank's London foreign exchange desk, is the replacement. Mr. Doherty, a grizzled veteran of Bankers Trust's lucrative trading units, will oversee 185 foreign exchange and bond traders. He is 32.

Mr. Eberli was one of the "key architects of Morgan's successful strategy over the past decade" and is "a brilliant tactician," said Christine Patton, a former colleague who now runs foreign exchange trading at Manufacturers Hanover Trust Co., the Manufacturers Hanover Corp. subsidiary.

Morgan, according to Mr. Eberli, is dividing his responsibilities among several executives. Timothy Teo, treasurer of the bank's Hong Kong office will move to New York to run spot and options trading; Pilar Conde, who had reported to Mr. Eberli as head of forward trading, will now report to managing director Marcus Meier; and John Arnold will head customer sales and report to Mr. Meier.

Your Money and Your Life. BankAmerica Corp. has a timetable, after all, for selling general insurance products through its new state bank, which opened this year in Concord, Calif.

Michael Moran, a vice president, told a conference of financial services executives that the unit, Bank of America State Bank, will begin selling general insurance products "very, very shortly." In a subsequent interview, he called January a "realistic start date."

— **Jeffrey Kutler**

* * *

The HLT Channel. NCNB Corp. reduced its portfolio of highly leveraged transactions by $700 million in the first quarter, though it still had $5.5 billion of loans and commitments to such deals on its books at quarter's end, according to a filing with the Securities and Exchange Commission.

The high number reflects the new regulatory definition of leverage, which forces banks to count loans to cable television borrowers in the high-leverage category. NCNB said that 24.2% of its loans outstanding in this category are to cable borrowers.

Using its own definition of high leverage, NCNB would have had just $1.8 billion of exposure, according to the filing. NCNB also said that it had loaned $50 million or more to just five borrowers under its high-leverage definition but under the regulatory definition had loaned that much to 26 borrowers. NCNB added that no leveraged loan under either definition has been charged off to date and that only $64 million in such loans were nonaccruing at March 31. ☐

RTC Reports Just 3 Resolutions in March but 42 in April and Early May

Following is a report by the Resolution Trust Corp. on the agency's activities in March.

In March, 20 institutions were taken into conservatorship by the Resolution Trust Corp., and resolution transactions reduced the caseload by three. As a result, 350 institutions were in conservatorship at the end of March, compared to 333 a month earlier.

All three resolutions were purchase-and-assumption transactions in which all deposits, certain other liabilities, and a significant portion of assets were sold.

March resolution activity was slower than in previous months because of uncertainties stemming from legal challenges to the Office of Thrift Supervision's authority to act against institutions under its jurisdiction. From the inception of the RTC in August 1989 to the end of March, 52 cases were resolved.

Spring Pace Quickens

More recently, the pace of resolutions has quickened; 42 cases were resolved in April and early May, raising the total to 94 through May 14. The trend is expected to continue, with 141 resolutions planned from the end of March to the end of June.

In dollar terms, the 20 conservatorships established in March held a total of $6.8 billion in assets; the three March resolutions represented $2.3 billion in assets. At the end of March, the 350 institutions in conservatorship held $159.8 billion in assets.

Of that total, 26.1% was in cash, mortgage-backed securities, or other investments; 29.8% was in performing one- to four-family mortgages; 21.5% was in other performing loans; 7.2% was in loans delinquent more than 90 days; and 8.6% was in real estate.

Differing Asset Mixes

As might be expected, the asset composition of institutions in receivership differed from that of conservatorship institutions in a number of important respects.

Cash and securities, performing one- to four-family mortgages, and other performing loans were smaller proportions of total assets for receiverships than for conservatorships. And delinquent loans (20.6%) and real estate (17%) were considerably greater portions of receiverships' total assets.

Including both conservatorships and receiverships, the inventory of assets under RTC management at March 31 totaled $173.1 billion, according to preliminary data. This included $43.3 billion in cash and securities, $50.2 billion in performing one- to four-family mortgages, $37.1 billion in other performing loans, $14.3 billion in delinquent loans, and $16 billion in real estate.

Conservatorship Receipts

RTC conservatorships sold assets worth $2.1 billion in March, including $1.3 billion in securities, $417 million in loans, and $264 million in real estate. Maturities and other payments brought in another $3.0 billion.

From August to March, conservatorships collected $19.9 billion from asset sales – including $14.8 billion for securities, $2.7 billion for loans, and $1.8 billion for real estate. Maturities and other payments totaled $16 billion.

In the three March resolutions, the RTC sold $1.2 billion in assets – about half the total assets held by the institutions involved. Assets sold included $637 million in mortgages and $446 million in other loans.

Resolution Asset Sales

From August to March, the RTC sold $6.3 billion in assets as part of resolution transactions.

Regarding March receivership proceeds, the RTC got $107 million from sales and principal payments and collected $18 million in interest.

Combining conservatorships, resolutions, and receiverships, the proceeds of asset sales of all types amounted to $3.2 billion in March and $26.3 billion from August through March.

Major Real Estate Sales

The proceeds of real estate sales by conservatorships and receiverships totaled $283 million in March. The book value of the properties sold amounted to an estimated $403 million. Highlights of the RTC's March real estate activity include the following:

RTC March Caseload

- Five parcels in the Hastings Green area of Houston – an asset owned by Ameriway Savings Association, Houston – were sold for $2.7 million, or 101% of their appraised value. Ameriway had been operating under government supervision since March 9, 1989.

- The Hyatt Grand Champions Hotel, a 316-room, 20-villa luxury hotel on 34.5 acres in the Palm Springs area of California, was sold to Maruko Inc. The hotel was a real estate asset owned by Gibraltar Savings, Simi Valley, Calif., which has been operating under government supervision since March 31, 1989. Maruko paid $66.5 million, or 104% of the property's appraised market value.

- A 2.88-acre estate lot on Meadowood Drive in Dallas, which boasts tennis courts and a swimming pool. The residential-zoned lot, which sold for $1.4 million, was a real estate asset of Metropolitan Financial Savings and Loan Association, Dallas, which has been in government conservatorship since March 10, 1989. The buyer plans to build a home on the lot.

- A 224-unit apartment complex on 8.3 acres in Houston – an asset retained by the RTC after the sale of University Federal Savings Association, Houston, to NCNB Texas National Bank Oct. 13, 1989 – was sold for $1.6 million.

- Residential land totaling 11.3 acres in a suburb of Dallas was sold for $2.6 million. This land was also among assets the RTC retained after the sale of University Federal.

- Eastchase Apartments, a 272-unit complex in Fort Worth, and Oak Hill Apartments, a 244-unit complex in Irving, Tex., were sold to DMC Dallas Apartments, a Dallas-area management company, for $6.5 million and $7.9 million, respectively. Oak Run Apartments, a 160-unit complex in Pasadena, Tex., was sold to Oak Run Manor, a Texas investment group, for $3.3 million. These were all direct sales by the RTC of assets owned by Gill Savings Association, which has been operating under government conservatorship since Feb. 7, 1989.

The RTC obtained funds from four sources from Aug. 9, 1989, to March 31, 1990: $18.8 billion in Treasury appropriations, $1.2 billion in Federal Home Loan Bank contributions, $9.5 billion in Resolution Funding Corp. borrowings, and $2.6 billion in Federal Financing Bank borrowings.

The 52 resolutions consummated through March required about $16.2 billion in RTC outlays. The agency also advanced $12.7 billion to conservatorship institutions as part of its high-cost funds replacement program and emergency liquidity loans.

The RTC carried about $3.2 billion into April to fund resolutions. □

Pennsylvania Thrift's Branches Sold with Deposits to 2 Banks

By PHIL ROOSEVELT

NEW YORK — Two Pennsylvania banks have bought the 37 branches of Horizon Financial, a Southampton, Pa., thrift, from the Resolution Trust Corp.

Bethlehem-based First Valley Bank, a unit of New Jersey-based UJB Financial Corp., acquired 21 Horizon branches with $935 million in deposits. And Pittsburgh-based Union National Bank, a subsidiary of Integra Financial Corp., acquired 16 Horizon offices with $550 million in deposits.

$26.5 Million to RTC

The RTC, the federal government's thrift liquidation unit, said it will get total premiums of $26.5 million from the acquirers, the equivalent of 2.07% of Horizon's core deposits.

Horizon had total assets of $1.76 billion and total liabilities of $2.1 billion.

"This transaction represents a low-cost entry into the attractive suburban Philadelphia and Lancaster markets," said T. Joseph Semrod, chairman and chief executive of UJB Financial.

Boosting Market Share

"The Horizon purchase will allow us to increase our deposit base consistent with our desire to boost market share in the Pittsburgh area," said Gayland B. Cook, chief executive of Union National.

In another RTC sale announced Tuesday, Zions First National Bank, lead subsidiary of Salt Lake City-based Zions Bancorp., said it agreed to acquire the deposits and certain assets of Deseret Federal Savings and Loan Association from the bailout agency.

Zions, which added $150 million in deposits, said all Deseret Federal offices have reopened as Zions branches.

Monetary Policy May Ease Soon, Analysts Believe

By ROBERT TRIGAUX

WASHINGTON — While stubborn inflation rates have all but forced the Federal Reserve to keep its hands off the economy since December, Fed watchers say new signs of business weakness could prompt the central bankers to ease monetary policy as early as this summer.

Data released Wednesday by the Commerce Department show the latest signals of slower growth. The index of leading economic indicators plunged two-tenths of 1% in April as new building permits declined for the third straight month. The index is the government's main barometer of future economic trends and is designed to show the direction of the economy in six to nine months. Also, sales of single-family homes fell 1.6% in April, to a seasonally adjusted annual rate of 546,000 units, the lowest since 521,000 in December 1982.

ANALYSIS: *Follow-up on the news*

If such a fall-off in activity is supported by other data in coming weeks – as a number of economists suggest will be the case – the Fed's inflation hawks on the Federal Open Market Committee will be hard put to convince fellow committee members that an easing of short-term interest rates is inappropriate.

A Rate of 8%

Rates in the short-term federal funds market have averaged 8.25% since December and further easing by the Fed would reduce the rate to about 8.0%

Analysts caution that with U.S. economic growth hovering below 2%, Fed policymakers have little downside cushion before the United States falls into a recession.

'Inflation Numbers Improving'

Nevertheless, the same inflation fears that drove long-term interest rates up near 9% earlier this year remain in the markets, economists said. Any easing of short-term interest rates will not occur without some accompanying signals that inflation is falling. Inflation roared in early 1990 at an 8.5% annual clip, aggravated by high energy and food costs, but has since fallen to the more familiar and stubborn range of just under 5%.

"Inflation numbers are improving and should continue to improve," predicted Mickey D. Levy, chief economist, First Fidelity Bancorp., Newark, N.J. "FEDgish economic growth is

After Years of Raising Fees, Banks Plan to Slow Down

By ELLEN MEMMELAAR

NEW YORK — After significant gains in fee income from retail services in the past few years, banks and thrifts are showing signs that they will ease their aggressive fee-increase policies, according to a recent survey by the Raddon Financial Group.

The survey shows a slight decline in the number of banks planning fee increases on various consumer services. For example, 38% of commercial banks in the study said they raised checking-account fees over the past 12 months, but only 10% expect to do the same in the coming year.

Financially strapped thrifts have become more inclined than banks to keep raising fees. While 24% increased checking fees in the past year, 31% expect to do so in the next 12 months.

FDIC Near Deal for 9 Texas Banks

By STEVE KLINKERMAN

DALLAS — Federal regulators are nearing the sale of nine troubled banks owned by National Bancshares Corp. of Texas, wrapping up a two-year struggle during which two proposed deals collapsed and the rescue cost mounted.

According to industry sources, the Federal Deposit Insurance Corp. late Wednesday was to select the winning bid for the insolvent units of National Bancshares, which is based in San Antonio. Barring any last-minute snags, the agency plans to consummate the deal on Friday.

Among the contenders, sources said, are Hibernia Corp., New Orleans; Chemical Banking Corp.'s Texas Commerce Bancshares subsidiary in Houston; First City Bancorporation of Texas, also of Houston; and Team Bank and Banc One Corp.'s Texas subsidiary, both based in Dallas. Officials of the five banking companies declined to comment.

State Banks Face Tighter Fed Policy On Dividends

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board on Wednesday proposed a rule that would make it harder for thinly capitalized state-chartered banks to pay dividends.

The proposal parallels one floated by the Comptroller of the Currency for national banks and reflects a harder line by regulators on dividend payouts that would drain needed capital.

The regulators' actions have fueled speculation that banks will be forced to reduce or suspend stock dividends when earnings or capital are under pressure.

Chase Notes Impact

Chase Manhattan Corp. said in a recent regulatory filing that its lead bank's "ability to pay dividends during the remainder of 1990 and in 1991 is likely to be severely impacted" under both existing and proposed limitations.

However, Chase said it expected to continue to pay dividends with money from sources other than its lead-bank subsidiary.

The Fed said its proposal would result in a "moderately stricter" limitation of dividend payments.

Currently, the maximum dividend a bank can pay is tied to its earnings and capital level. The Fed proposal would change how

California Rivals Covet Carson's Empire

By TERESA CARSON

LOS ANGELES — After 39 years of climbing up the company's ladder, Edward M. Carson takes charge of First Interstate Bancorp on Friday. But observers are wondering if his newly gained $57.4 billion empire will be snatched away.

Takeover rumors have eddied around the chronically underperforming First Interstate for some time. The retirement of long-time chairman and chief executive Joseph J. Pinola is renewing speculation.

Mr. Carson dismisses the talk as media hype and says First Interstate has not received any offers. In an interview, the 60-year-old banker says he is convinced "after a lot of soulful thought" that he and new president William E.B. Siart will be better for shareholders than a takeover.

But in the highly competitive, overbanked California market, First Interstate may prove to be the odd man out. Most industry observers interviewed give the bank only a fifty-fifty chance of surviving as an independent company.

COMMENT/*By Stephen H. Axilrod*

Budget Agreement Could Finally Be Close at Hand

The administration and Congress are slowly approaching the immense problem of the budget deficit. Of course, that is not new. They have been slowly approaching for some years now.

But it is new that the President has now put his prestige behind finding a solution. This gives some hope that there will be a successful outcome and that this seemingly perennial issue will be resolved. Maybe that is too much to hope, but if a deficit agreement involving cuts on the order of $50 billion or more for the next fiscal year can be obtained, we will have achieved a substantial down payment toward a viable budget.

Taxes Will Rise

I have little doubt that a budget agreement will require significant tax increases. The public now appears to be resigned to them, even including some form of income tax increase. There are simply not enough spending cuts available.

While our domestic social problems cannot be resolved merely by throwing money at them, large-scale spending cutbacks in that area cannot be helpful. Defense spending will wind down only gradually, and in any event cannot in and of itself reduce the deficit nearly as much as needed.

How much of a budget deficit we can afford is a complicated question. It depends in part on private saving in the country. The more saving we have, the bigger the deficit that can be absorbed.

Since the stock market crash of 1987, the personal saving rate in the United States has risen. Most recently, however, it seems to be flattening out – a personal saving rate of 5.6% in the first quarter of 1990 is only a little higher than 5.4% for 1989 as a whole.

Moreover, the distinct decline in corporate profits over the past year weakens private saving as a whole. Thus, by the first quarter, total private saving, including business capital consumption allowances, was running somewhat lower as a percent of GNP than it had last year.

State and Local Pressures

The flattening trend of private saving, as well as the growing fiscal problems of states and municipalities, makes it more urgent to reduce the federal budget deficit. If not, we will not be able to increase the proportion of our resources devoted to the new domestic plant and equipment that are needed to increase national productivity and the growth in our standard of living. Or at least we will not be able to do so without generating an excessive, and ultimately self-defeating, dependence on foreign funds – a dependence that has already gone far enough.

A budget compromise of trivial dimensions was reached following the October 1987 stock market crash, partly because of pressure from other leading foreign countries. They feared that a weak dollar and high U.S. interest rates would undermine equity values in all major markets and threaten world economic expansion. Since that time, the dollar has stabilized on exchange markets, and the U.S. stock market has exhibited underlying strength.

Pressure to correct our budgetary situation does not now stem from an actual or imminent international monetary crisis. It comes because we are running out of money to do what is best for our domestic concerns and also to maintain our leading place in the international economic and political spheres. Perhaps that will provide an even stronger incentive to reach a nontrivial agreement.

Threat of Recession

A budget agreement in the current relatively fragile economic environment involves some threat of recession. If the deficit cut is as large as it should be, economic activity could be retarded for a while. But that should not last long; the lower interest rates from the cut will be an offsetting force.

In any event, the improved international competitiveness of U.S. industry, and a relatively low dollar, will buffer the economy against any cumulative weakness.

Budget cutting might have quite limited effects on overall economic activity if the Federal Reserve were in a position to ease monetary policy, and push interest rates down even faster, in anticipation of the cuts once they are agreed on. But that is plainly impractical under current conditions. Too much inflation has already been allowed to creep back into the economy to take that risk.

"The public now appears to be resigned to [tax increases], even including some form of income tax increase. There are simply not enough spending cuts available."

The basic threat of recession in fact is less from a budget agreement than from financial dislocations and efforts to contain inflation. A budget agreement would ease both problems. It would not make a recession or economic slowdown less likely, but it would make the ensuing recovery much more sustainable and long lasting. ☐

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

THE LOBBYISTS

Cities Present RTC With Blueprint for Asset Disposition

Fearing that U.S. cities have the most to lose with the federal government's high-stakes sale of troubled real estate, the **National League of Cities** is urging the **Resolution Trust Corp.** Oversight Board to reconsider recently adopted asset disposition policies on price discounting and auction sales.

Bob Bolen, president of the league and mayor of Fort Worth, Tex., sent letters this month to oversight board members, including Federal Reserve Board Chairman Alan Greenspan and Treasury Secretary Nicholas F. Brady 3d, telling them that the cities "have the most to lose" if the sale is not executed properly.

Bob Bolen

Mr. Bolen suggested several guidelines for the RTC. First, make disposition of commercial properties to the private sector a priority. Second, reject scheduled or progressive discounting. Third, schedule quarterly auctions for properties that could have the best or healthiest impact on local economies. Also, immediately discount affordable housing by 50% and ensure better notification of the availability of these properties.

The trade group also wants the agency to hire people to work directly with local governments.

One of the association's major concerns is the plan known as progressive discounting. Under this policy, property is discounted if it fails to attract buyers.

"What that means is if you are a potential investor, you can say, 'Why should I buy that today when the price will drop?' " said Frank Shafroth, director of federal relations for the National League of Cities. "It sort of puts a deep freeze on any money coming into the market."

The league will soon meet with several other groups, including the **Association of Community Organizations for Reform Now,** the **Low Income Housing Coalition**, and the **Consumers Union.**

* * *

Ashley Goes to Bat For President's Son

As if Thomas "Lud" Ashley doesn't have enough clout with the White House.

Earlier this month, when the President's son Neil was called before the House Banking Committee to explain his dealings as director of a Denver thrift, he was accompanied by none other than Mr. Ashley, president of the **Association of Bank Holding Companies**.

Mr. Ashley, a former Democratic member of Congress who served on the banking committee, also made calls around Capitol Hill on behalf of Mr. Bush, who has been accused of voting on loans to business associates while a director of Silverado Banking, Savings and Loan Association.

Lud Ashley

Mr. Ashley has not lacked for White House access since Mr. Bush was elected President. The two men have been close friends since their college days at Yale.

* * *

Group Backs Unified Market Regulation

A coalition has been formed to back up the Bush administration's efforts to unify the regulation of stocks, stock options, and stock index futures. The **Coalition for Intermarket Coordination** comprises all the major stock exchanges, with the notable exception of the Big Board in New York, plus the **National Association of Securities Dealers** and the **Options Clearing Corp.**, Chicago.

"The market breaks of October 1987 and October 1989 clearly demonstrated what we have known for some time – that the markets for stocks and stock derivatives constitute, in economic terms, a single market," said Wayne P. Luthringshausen, head of the coalition.

A spokesman for the organization said its day-to-day lobbying activities will be handled by Thomas Boggs, a well-known lawyer with the firm of **Patton, Boggs & Blow**.

Testifying last week before the House Energy and Commerce subcommittee on telecommunications and finance, Mr. Luthringshausen, chairman of Options Clearing Corp., said the close linkages between equities and derivative products create a "compelling need for increased intermarket coordination."

The administration bill, which the coalition supports, would give the Securities and Exchange Commission jurisdiction over trading of stock index futures, which are now regulated by the Commodities Futures Trading Commission. It would also give the SEC authority to set margin requirements for stocks, options and index futures, responsibilities that are now shared by the Federal Reserve and the individual futures exchanges.

MARKETING/ADVERTISING

Bull Market Is Predicted For Bank Marketing Pros

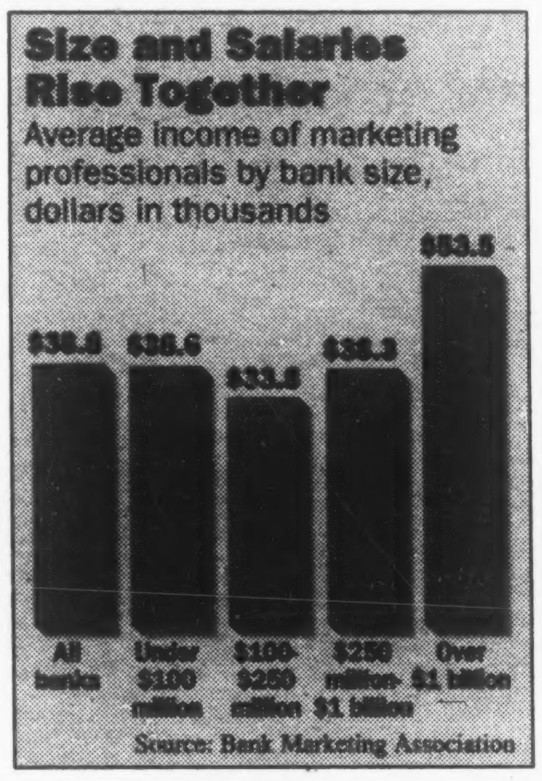
By ELLEN MEMMELAAR

NEW YORK — Banks' closer focus on marketing and the high level of technical expertise it demands is transforming the bank marketing profession, according to J. Douglas Adamson, president of the Bank Marketing Association.

But the total number of marketing executives will increase only slightly during the next several years, he said.

Already, the proportion of banks increasing their staffs of marketing professionals is falling. Eleven percent of the 471 banks in the survey expect to increase the number of marketing positions in the next 12 months, down from 14% during the previous 12 months, according to *Inside Bank Marketing*, a publication on the study by the Chicago-based BMA.

However, the changing face of retail banking can be expected to generate much turbulence below the surface of this seemingly placid projection, creating ample opportunities for marketers in the industry, Mr. Adamson said.



Size and Salaries Rise Together
Average income of marketing professionals by bank size, dollars in thousands

Source: Bank Marketing Association

Decentralization Expected

Overall, bank marketing will continue to receive increased shares of senior executives' attention and budget due to the sharply competitive environment in the financial services sector, said Mr. Adamson. But he sees the marketing function becoming increasingly decentralized at larger institutions as individual departments assume more responsibility. Also, these banks will continue to rely more on out-sourcing, replacing permanent workers with consultants and specialists on a single-project basis.

At banks in the survey with less than $100 million in assets, most chief executive officers indicated that they alone were responsible for marketing decisions. With the advent of more sophisticated marketing needs, these banks will be hiring a specialized executive, he said.

While Mr. Adamson expects headhunters to fill some of the needs of banks searching for qualified marketing executives, he firmly believes that many new marketing professionals will come from within existing ranks. Currently, 14% of experienced professionals and 38% of entry-level marketers are found this way.

Recruitment Efforts

In the search for experienced marketers, 19% use trade advertisements and 20% use search firms.

"All things considered, it is more difficult for a marketing professional to learn banking than it is for a banker to learn marketing," said Mr. Adamson. "How can a guy who used to sell soap come in and expect to manage a credit card portfolio?"

Mr. Adamson said he expects the average salaries of bank marketers to rise along with their status in the banking industry.

Regionally, the highest-paid bank marketing executives can now be found in the Northeast, where they average $57,800 a year. In other regions they earn $38,900 or less.

The larger the bank, the higher the pay. Banks with more than $1 billion in assets pay their marketing executives an average salary of $53,500, compared with $38,600 at banks with lower assets, the study showed. ☐

---

2 Firms Join Forces to Offer Segmentation Package

Two of the nation's major marketing information companies have joined forces to offer a computer-based segmentation package of use to bankers and other financial marketers.

The **Arbitron Co.** and the **Claritas Corp.** announced a joint marketing agreement last week that will result in their products being available through one unit.

New York-based Arbitron is known for its Compass product, which allows users to access and analyze multiple data bases. It combines demographic, cartographic, primary-client data, and syndicated third-party data to produce reports, analyses, and full-color marketing maps of any area in the United States.

The agreement lets Arbitron market Claritas' popular PRIZM product. PRIZM is the Alexandria, Va., company's lifestyle segmentation system that defines each neighborhood in the United States according to 40 distinct types. Using the combination of Arbitron and Claritas products, users will be able to analyze media viewers and listeners by lifestyle cluster. ☐

A Slowdown in the Bank Fee Spiral

Continued from *page* **1**

gress. There is no direct indication in the Raddon data that bankers are responding with smaller or fewer increases.

But some bank marketing experts are warning that the industry runs the risk of overdoing price increases and chasing customers away.

"Until this point, bank marketers have kept consumers sullen but not rebellious" when introducing or raising fees, said Edward Furash, a Washington-based management consultant. "Now consumers are rebellious."

Group Tracks Prices

Some of the rebelliousness is articulated by consumer advocates such as Consumer Action, a San Francisco group that monitors price increases by California financial institutions. Consumer Action surveys, which are widely reported in California news media, have shown steady increases in checking, savings account, and credit card pricing over the past five years.

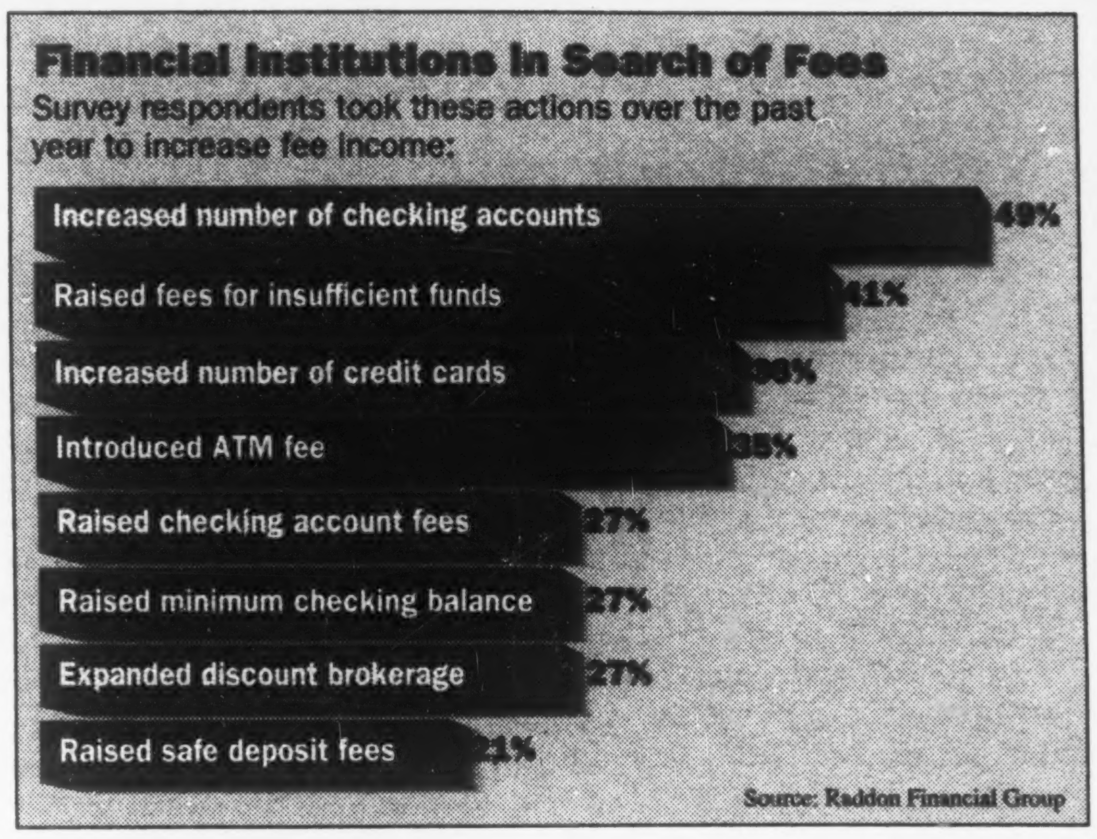
"It is getting harder for consumers with limited incomes to find a bank that offers competitive rates without charging exorbitant fees," Amy Rosewarne, Consumer Action survey coordinator, said earlier this year.

The concern about services for poor people has spawned several proposals, now being debated in Washington, to require that banks offer a basic, low-cost package of lifeline services to anyone who requests it.

Price Hikes Still a Priority

Still, 65% of the 75 banks, thrifts, and credit unions in the recent national study by the Raddon group, a Chicago-based consulting and research firm, said fee increases were important to their earnings- and capital-improvement strategies. By contrast, cuts in operating budgets were mentioned by 55% of the respondents, staff reductions by 48%.

Commercial banks were slightly more aggressive than thrifts in projecting fee-increase strategies. Almost three-fourths of the 21 banks in the Raddon survey said they expected to use pricing to bolster earnings, compared with 63% of 51 thrifts. Half the banks also planned to cut operating costs, compared with six of 10 thrifts.



Financial Institutions in Search of Fees
Survey respondents took these actions over the past year to increase fee income:

Source: Raddon Financial Group

Over the last year, 57% of the banks and 45% of the thrifts got the bulk of their fee growth from increased checking-account business, according to the research company. A total of 38% of banks and 24% of thrifts raised their existing checking account fees to generate income; 52% of banks and 37% of thrifts raised NSF (insufficient funds) fees; and 43% of banks and 29% of thrifts increased their automated teller machine transaction fees.

In the year to come, the picture changes slightly. About half of both banks and thrifts plan to increase their numbers of checking accounts to strengthen fee income. A smaller group – 29% of banks and 24% of thrifts – plans to increase its credit card base to generate fees. Some 10% of banks and 31% of thrifts are seeking to raise their checking account fees in the coming year as well.

Despite the diminishing inclination to raise checking fees, the plans may backfire on banks, said Mr. Furash, president of Furash & Co.

"There was a point where all the stress and emphasis on service made the changes in fee income pay off" for the consumer, he said. "But now we're at the edge where the consumer may feel that it has been overdone."

Mr. Furash cautions that his condemnation is not across the board. In some markets, there is still room for fee increases. However, in most markets, fee income has hit a ceiling, and any moves to raise fees higher may result in customer flight, he said.

For most institutions, shrinking or eliminating retail fees is not an option. They have generated substantial income and turned formerly unprofitable or marginally profitable products such as credit cards into the black.

Institutions also use differential pricing or incentives to steer customers toward higher-margin products such as certificates of deposit and money market accounts, said David Bennett, president of Omega, a consulting firm based in San Francisco.

While some institutions eliminate fees to stimulate sales of a particular product, most of these promotions are temporary, Mr. Bennett said.

"Up-front fees and the cost of marketing a product are of more concern to bank marketers than interest rates right now," said Gary Raddon, president of Raddon Financial Services. But he said he believes that this will pass as bank marketers become more expert in pricing strategies and techniques.

Mr. Bennett said that he, too, thinks that consumers will become less resistant as "banks find different ways to hide [fees] so that they are not as visible as they are now." This includes using flat monthly service charges and packaged account products to spread out the cost to both the consumer and the bank, he said. ☐

The Bank Rate Monitor Index is the average of rates being charged by the 100 largest banks and thrifts in the nation's 10 largest markets on the dates indicated. Other rates quoted are the lowest and highest offered at the same institutions. Auto loan rates are for a $9,000, 48-month, new-car loan with a 20 percent down payment. Personal loan rates are for a $3,000 unsecured personal loan with a 24-month term. Credit card rates are fixed rates only and do not take into account differing annual fees or grace periods.

Bailouts to Top Private Mergers In 2d Quarter

By REID NAGLE
and KEVIN STIROH

For the first time since the Depression, more bank and thrift assets will change hands through government bailouts than through private-sector mergers and acquisitions.

At current levels, the government will arrange marriages for at least $20 billion of deposits in the second quarter of 1990. The figure could go as high as $40 billion if the Resolution Trust Corp. meets its target of 140 resolutions by June 30.

ANALYSIS: *Follow-up on the news*

By contrast, private-sector acquisitions are likely to be below $15 billion of assets, less than a third of the assets that changed hands during last year's merger-charged third quarter. That quarter was tied with the third quarter of 1987 for most banking assets changing hands.

Not surprisingly, the rising tide of deals, a majority of which relate to the thrift bailout, has resulted in a sharp decline in prices paid for depository franchises. This across-the-board price decline has affected every type of sale – bank and thrift, public and private.

A useful yardstick for measuring premiums is to take price above tangible book value and compare it with deposits.

By this measure, premiums rose steadily through the first three quarters of 1989, reaching 7.5% of deposits in the third quarter, and have since declined to less than 5%. Seller resistance is likely to prevent prices from falling much lower in the near future, thereby causing a further slowdown in the total volume of private-sector deals.

This article is the launch of a new column, Mergers, that every Friday will report on bank and thrift acquisitions as part of the American Banker's expanded finance coverage.

Ultimately, sellers' perceptions will move into line with the reality of the marketplace. When that happens, prices will fall and private-sector deals will begin to pick up. But that day is a long way off.

At the same time that private-sector consolidation is trailing

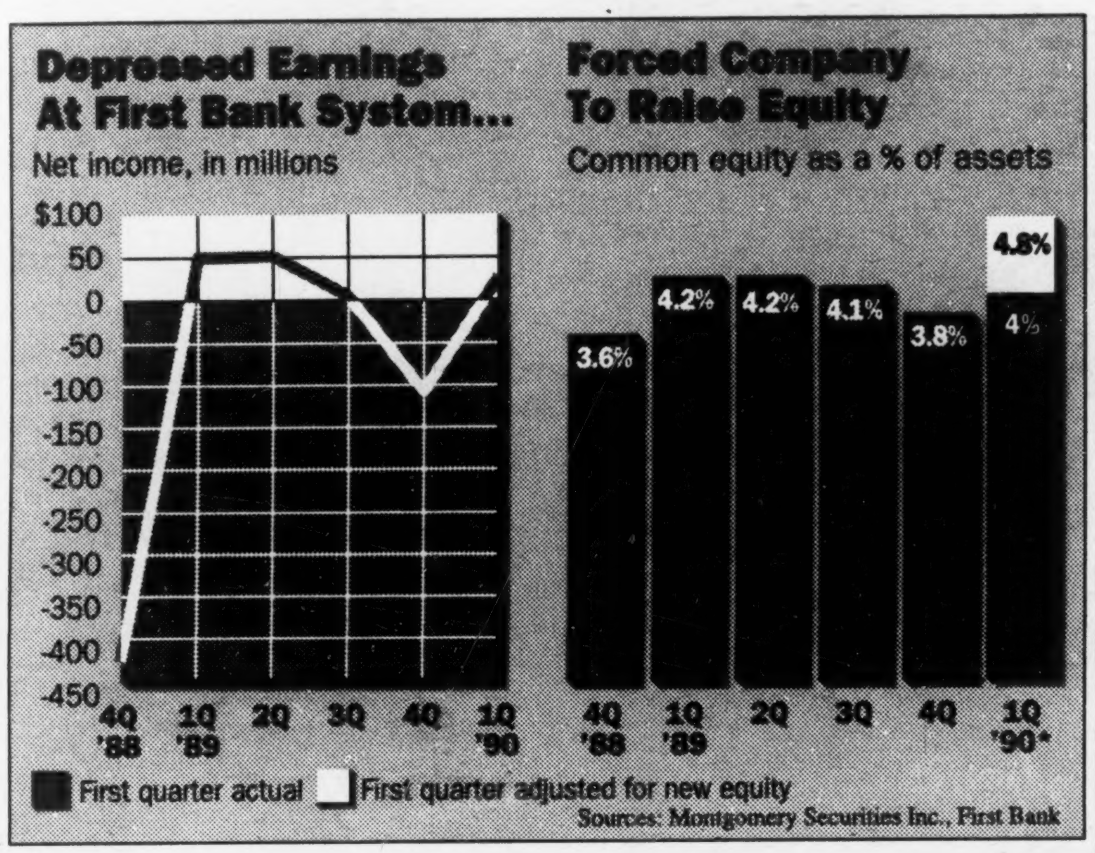
Depressed Earnings At First Bank System... Net income, in millions

Forced Company To Raise Equity Common equity as a % of assets



Sources: Montgomery Securities Inc., First Bank

First Bank System to Boost Equity With a $175 Million Private Issue

By KELLEY HOLLAND

Marking a key stage on the road to recovery, First Bank System on Thursday said it was raising $175 million in equity, which will strengthen its capital position and reduce its susceptibility to an unwanted takeover.

"We did this to help grow the company and get it ahead of the curve," said John F. Grundhofer, chairman, president, and chief executive officer of the Minneapolis banking company. "We'd like to be an acquirer rather than a target."

A Private Placement

The new common stock, to be placed privately with two institutional investors, will raise First Bank's equity-to-assets ratio from 4.0% to 4.8% on a pro forma basis for the first quarter.

The two investors are Corporate Partners, a limited partnership managed by two senior officials of the investment banking firm of Lazard Freres & Co., and the State Board of Administration of Florida, the investment arm of the state of Florida.

When the sale is completed, which depends on regulatory approval, the investors will own a total of 16.6% of First Bank System's outstanding shares.

Under the agreement they can increase their ownership to just under 25% of First Bank. But the pair agreed to restrictions regarding the sale of their stake, giving the bank a measure of protection against unsolicited takeover bids.

For example, the investors agreed not to transfer their

BankAmerica Is Expected To Acquire Arizona S&L

By STEVE KLINKERMAN
and SAM ZUCKERMAN

BankAmerica Corp. today is expected to acquire the deposits and some of the assets of Western Savings and Loan Association, a $4.2 billion-asset Phoenix thrift controlled by the Resolution Trust Corp.

The purchase price could not be learned. But the failed thrift had a capital deficit of $1.4 billion at the end of 1989, according to Sheshunoff Information Services, an *American Banker* affiliate.

That suggests the deal will cost the RTC more than $1 billion, making it one of the biggest and most costly transactions conducted by the agency.

Spokesmen for San Francisco-based Bank of America and the RTC declined to comment. But officials at the bank company's annual meeting last week identified Oregon, Nevada, and Arizona as top expansion priorities.

Arizona is the only state on the list where the company does not have a banking license or the beginnings of a branch network.

Western is one of seven failed Arizona thrifts controlled by the RTC. The institution has 62 branches and is the second-largest thrift in the state.

S&L Executives' Pay Rises as Profits Fall

By BILL ATKINSON

At the nation's largest thrifts last year, salaries were going up while performance was going down.

The median pay of the top executive at the 20 largest thrifts jumped 9.7%, to $643,132, while the return on average assets fell by more than half, to 0.24%, according to a study by Grant Thornton, a Chicago-based accounting and consulting firm (see table on page 10).

Of the 20 highest-paid executives, nine received higher compensation even though their institutions reported decreased earnings.

The biggest increase in compensation – 30.3% – went to Ray Martin, chairman and chief executive of Coast Savings and Loan Association, who earned $806,760. Meanwhile, Coast's return on assets fell to negative 0.62%, from 0.39% in 1988. The Los Angeles-based thrift lost $74.1 million when it wrote off

COMMENT/*By Denis Burns*

Competition Fosters Need To Understand Marketing

For most banks and bankers, marketing is a relatively recent discipline. In today's deregulated, fiercely competitive environment, they understand the need for marketing. But in many instances, they do not understand the process.

That's why we hear such conflicting complaints as, "We're not spending enough on marketing" and "We're spending too much on marketing." Not to mention the cry for help: "How can we tell how effective our marketing expenditures are?"

Like packaged goods marketers before them, bankers – to get the most from marketing – must understand the process. Marketing is more than writing ads, cranking out brochures, and designing branch signs.

Marketing involves identifying a significant and attractive market, creating products to meet the unfilled needs of that market, and then putting together the necessary support (e.g. pricing, delivery system, advertising, promotion, staff training) to sell them successfully.

An External Focus

Thus, marketing – effective marketing – focuses on the exterior world: markets, their segments, the competition. Success is generally measured by what you can bring to the marketplace that is better than what your competitors offer. In marketing language, that's "differentiation," or "competitive advantage." And it is necessary for real, long-term success. On the bottom line.

Banks that fail to do effective marketing are those that look inward: are content to sell products already on their shelves, products that are no different from or better than those of the competition. Banks that do not price competitively. Banks that are content with mediocre service. Or banks that allow operational lethargy to preclude creation of marketable new products.

The Process by Stages

A traditional model of the marketing process has five major stages, beginning with a look at the exterior world – the markets to be served – and ending with evaluation of results. The intermediate stages are a look at the interior environment, or a bank's strengths and weaknesses; the setting of a strategy; and implementation of the plan.

But there is interaction between and among each of the stages. Marketing is an ongoing process.

Understanding the marketing process is the first step in taking the mystery out of marketing. It is necessary but not sufficient.

Where on the Chart?

For example, many banks and bankers understand the essentials of the marketing process, and consider marketing integral to basic corporate strategy. But they wring their hands over the dilemma – is marketing a line or staff function?

Common sense dictates it is not a staff support activity, since it includes all the factors contributing directly to the sale of products, and therefore produces revenues on the income statement. Marketing is a line function, and is so considered at most marketing-oriented manufacturing companies.

Another area of mystery is marketing vocabulary. Terms like "market segmentation," or "random sample" are really not hard to understand. Study a marketing textbook. Attend seminars such as those offered by the Bank Marketing Association.

> **"Like packaged goods marketers before them, bankers must understand the process. Marketing is more than writing ads, cranking out brochures, and designing branch signs."**

Ask for an Explanation

Better still, ask your marketing manager to explain. Just as you have taught him or her bank-ese, he or she should be happy to give you a short course in marketing-ese.

Understanding the process will help determine the right people to hire or place (if they are already on your staff) in the marketing department. The right people are those who understand and are comfortable with the process. If you are not sure, have candidates interviewed by your ad agency, use headhunters who know marketing, or hire a consultant with the right background to screen resumes and candidates.

Evaluating the performance of a marketing department need not be an arcane exercise. Once you understand the process, once you have approved the strategy – and the budget – you should be able to quantify the results expected, set clearly measurable goals, and measure performance against those goals.

Many banks have trouble setting realistic goals (e.g., new accounts, balances). If you have doubts, check with the Bank Marketing Association or a qualified consultant.

Once you have understood the process and are no longer intimidated by the jargon, you should be in a position to confidently harness marketing to your strategic plan – to make it produce for you and your bottom line.

Do not, however, make the mistake of micromanaging. You do not have to know how to construct a reach and frequency table, or write a telemarketing script. You have other things to think about. After you have involved your marketing team in your strategic thinking, you have only to understand what your marketing team is doing – and evaluate its performance.

With the confidence that comes from understanding, you will have removed the mystery from marketing. You will then be in a position to use it as an engine to drive the growth of your bank. ☐

Mr. Burns spent 25 years in marketing at Chase Manhattan Bank, Citibank, and General Foods Corp. He recently opened Denis Burns Consulting, New York.

FUNNY MONEY/*By Tom Leander*

Security Trinket

Investors have at times compared the mortgage-backed securities market to a jungle. Perhaps the Federal National Mortgage Association had the comparison in mind when it hatched its latest promotional gimmick.

Peggy Turbett

TRUNCATION: Fannie Mae's pint-size pachyderms.

Representatives of the quasi-governmental mortgage investment agency have been distributing five-inch-high beanbag elephants at conferences and on sales calls. Fannie Mae's variety of mortgage-backed securities "makes managing your portfolio just as easy as juggling the Friendly MBS Elephants," says a note on the yellow container they are packaged in.

The inspiration for the elephants came from within Fannie Mae, says a spokesman. McKinney & Silver, Fannie's Raleigh, N.C., advertising agency, quickly seized on the elephant motif to trumpet the virtues of Fannie Mae in recent newspaper ads.

Officials would not reveal the cost of the tiny pachyderms, but a spokesman suggested that it was peanuts compared with the goodwill the elephants have generated as toys for investors' kids.

Hong Kong Hex

When the Bank of China opened a skyscraper in Hong Kong in May, it was viewed as symbolic of China's eventual takeover of the colony in 1997. The building's daring design by the Chinese-American architect I.M. Pei – featuring four prism-like pillars topped by twin antennas – won acclaim from architects worldwide.

But some Hong Kong residents are spooked by the hulking tower, which they say resembles daggers. The two antennas at its top have been likened to empty chopsticks. Both symbols are bad omens under a Chinese folk tradition called *fung shui.*

The controversy has grown into a public issue reminiscent of one faced in the United States by the Procter & Gamble Co., whose corporate logo of a crescent moon was said to be an occult symbol. The Cincinnati-based company has said the allegation was absurd.

Some Hong Kong citizens hang small mirrors outside their windows to reflect the bad luck cast by the tower – at 1,289 feet, the tallest in the city.

* * *

An Itch in Time

ARCS Mortgage Inc., the mortgage banking unit of Bank of New York Co., has come up with a new name for one of the hottest types of mortgage: "The 7-Year Itch."

The company is using the name for a loan that features a relatively low interest rate for seven years and then adjusts to another rate for the remaining 23 years. Lenders nationwide have been reporting success with similar loans.

The name recalls a 1955 film of the same title, starring Marilyn Monroe and Tom Ewell, about a man whose affections stray after seven years of matrimony. But Ira Cohen, an ARCS senior vice president, says some of the company's employees are associating the name with something else.

"They say it sounds like a disease – something you need some kind of cream for," he said.

He added, however, that "a lot of consumers call us about it, so that's good."

— Phil Roosevelt

Put Yer Money Heer

Would-be thieves sneaked up to a night depository at a branch of Barclays Bank in York, England, last week. Armed with drill and screws, they attached a phony night deposit box to the surface of the genuine one.

The thieves intended to remove their box before morning, after local storekeepers had dropped cash in the slot, according to police.

But flimsy construction – and perhaps bad spelling – scotched the job. Police said a customer who deposited his money became suspicious about the loose-fitting aluminum box and the sign on it. He phoned the police, and they confiscated the apparatus.

The thieves tried to reassure depositors with a notice on their bogus safe stating, "Due to key vandalism, use the temporary shute," which should have been spelled "chute."

Thrift Executives' Compensation Rises as Returns Dwindle

Continued from *page* **1**

goodwill to comply with the thrift-bailout law.

Inverse Relationship

"What bothers me is you see guys getting increases when the performance of their companies has dropped significantly," said Jon Rosenbaum, senior manager at MCS Associates, a division of Grant Thornton, who conducted the study.

"I want to see more sensitivity so that, when a company's earnings drop, the executive's cash compensation should reflect that. Some companies do a good job of it, others do not."

The study may prove embarrassing for thrift executives, coming at a time when the price tag of the government's bailout of the industry is rising rapidly.

Taking the Long View

But some executives took issue with the findings. "I think executives are compensated on their long-term contribution to the organization, not just year-to-year, or quarter-to-quarter return on equity," said Kirk Hallahan, a spokesman for Coast Savings.

He said Mr. Martin received a base salary of $600,000; the remainder of the compensation came from stock options he exercised.

A spokeswoman for H.F. Ahmanson & Co. also offered an explanation. Richard Diehl, chairman and chief executive of Ahmanson's Los Angeles-based thrift, received $1.2 million in compensation, up almost 16% from the previous year, while Ahmanson's ROA slipped to 0.45% from 0.53%.

But the spokeswoman, Mary Trigg, said the earnings decline resulted from a increase in the effective tax rate. She said despite the decline, the company's pretax core earnings increased $52.8 million over the previous year, net interest income was up 13%, deposits rose, and loan volume was the third-highest in the institution's history.

NOTES

1. Fiscal year ending 6/89. 2. Fiscal year ending 11/89. 3. Fiscal year ending 6/89. 4. T. Speigel resigned in December 1989. 5. T.A. Cooper joined Goldome in April 1989 as CEO and president, replacing the retired R.B. Kenzie. 6. D.L. Thomas retired in March 1989; thus a full year's compensation is not reflected in this figure. 7. J. St. Dennis 3d was elected president and COO in July 1989, chairman and CEO in February 1990. J.R. Torreli 3d, former chairman and CEO, terminated in July 1989, received $2,232,870, of which $2.2 million represented a severance settlement pursuant to the terms of his contract. 8. Based on 15 officers holding identical positions in 1988 and 1989. * A portion of compensation paid in 1989 reflects prior year's performance. Unless otherwise noted, all fiscal years end in December. Percentage changes in annual compensation computed only for those individuals who served in the same capacity for years 1988-89.

Source: Grant Thornton

Several industry followers interviewed do not think the compensation packages are out of whack because the thrift business has become extremely complicated and dicey.

"There is that saying, you pay for what you get," said James Barth, an industry watcher and professor at Auburn University. "You have to pay to get good people."

The highest-paid executive was James Montgomery, chairman and chief executive of Los Angeles-based Great Western Financial Corp. He racked up $1.3 million in compensation – unchanged from the previous year – while the thrift's ROA fell to 28 cents for every $100 in assets from 82 cents in 1988.

The biggest loser was Thomas Spiegel, former chairman and chief executive of Los Angeles-based Columbia Savings and Loan, who received compensation of $750,000, down 80% from the previous year. Columbia lost $4.51 for every $100 in assets. Huge losses from its junk-bond portfolio have made Columbia a candidate for seizure by federal regulators.

Detroit-based FirstFed Michigan Corp. chairman James Aliber saw his compensation package drop nearly 18% to $492,450 because of the S&L's weak performance compared with previous years.

The Grant Thornton study analyzed chief-executive compensation at 97 publicly held S&Ls from 1987 to 1989 by sifting through proxy reports.

The study found that while 88% of the thrifts in the study posted declines in earnings, the majority of the institutions reported increases in compensation.

Nine percent of the executives received pay hikes of more than 20%, while 31% received increases of more than 10%.

Overall, the median cash compensation rose by 6% in 1989, which matches 1988 figures, but fell below the 13% increase reported for 1987, the study stated.

Mr. Rosenbaum said that while the industry's compensation packages may not be excessive, directors will be criticized if they are not tied more closely to the institutions' performance.

"I think directors have to come to grips with the issue. I would certainly hold them responsible for this," he said.

"I think boards in general have not done a good job of holding CEOs accountable through more sensitive compensation programs. You are going to see more and more pressure being placed on the directors."☐

NESB Seeks to Renegotiate Senior Notes

By STEPHEN KLEEGE

NEW YORK — NESB Corp., New London, Conn., was trying on Thursday to reopen negotiations with a group of insurance companies that demanded immediate payment in full of $50 million of senior notes on which the thrift-holding company is in default.

If a settlement cannot be reached, the company's New England Savings Bank may be forced to sell assets, risking losses and erosion of capital.

"There was no movement between our regulators and the lenders. At the moment, this is a stalemate," said Ezra Harris, president of the savings bank, explaining why the negotiations broke down.

Impasse Over Collateral

He said the impasse centered on the lenders' insistence that New England Savings Bank assets serve as collateral for the holding company's notes – something the Federal Reserve forbids in transactions between holding companies and their subsidiaries.

Mr. Harris declined to say how the holding company would raise the $50 million if it cannot negotiate a resolution. He said Travelers Corp., Hartford, and Cigna Corp., Philadelphia, were the largest of the creditors, accounting for more than 50% of the notes between them.

The notes, issued in connection with NESB's 1988 acquisition of Omnibank, had been due in 1995, but NESB defaulted under the terms of the notes when its capital fell below 6% at the end of the second quarter.

Analyst Don J. Kauth of First Albany Corp. said the losses that put the holding company in default ironically were associated with the real estate and construction loan portfolio of Omnibank.

"With nonperforming assets in excess of 12%, they may not be able to go elsewhere to borrow. They may have to sell assets," Mr. Kauth said.

A total of $167 million of the savings bank's loans are nonperforming, and the bank has taken reserves for $40 million. That leaves the company's $71 million of capital well short of its $127 million in unreserved nonperforming loans, Mr. Kauth said.

The company still meets its regulatory capital requirements.

Lomas to Buy Servicing Portfolio

NEW YORK — Lomas Mortgage USA said it has agreed to acquire a $600 million mortgage-servicing portfolio from Ameriway Mortgage Corp., a Houston concern affiliated with a thrift under control of the Resolution Trust Corp.

Lomas did not disclose the terms, and an RTC official could not be reached for comment.

The move follows Lomas' acquisition earlier in May of a $3.4 billion servicing portfolio from Bright Mortgage Co., also under RTC control.

Portfolio to Highest Level

Lomas Mortgage, a unit of Dallas-based Lomas Financial Corp., said the Ameriway purchase will bring its total servicing portfolio to $24.7 billion, its highest level ever. Like other servicers, Lomas earns fees for funneling monthly payments from borrowers to investors and performing other administrative chores.

The Ameriway deal "serves as confirmation that Lomas is firmly and actively committed to a strategy of controlled growth and establishing itself as a major participant in the resolution of mortgage assets associated with troubled thrifts," said Terry J. Deyoe, an executive vice president at Lomas Mortgage.

Atlanta Bank Acquires Thrift Assets via RTC

ATLANTA — Merchant Bank of Atlanta said it has acquired the insured deposits and branch network of First Federal Savings and Loan Association from the Resolution Trust Corp. It did not disclose the terms.

First Federal operated 13 branches in the Atlanta area and had total deposits of $169.8 million, Merchant Bank said. Merchant, which had $37 million in assets at the end of March, also acquired branching rights in Clayton and Cobb counties in the transaction.

How One S&L Lost Value Under the RTC

By TERESA CARSON

ANALYSIS: *Follow-up on the news*

LOS ANGELES — Small groups of bidders are now huddling over the books at Gibraltar Savings' Simi Valley, Calif., headquarters trying to determine how much the failed thrift is worth to them.

Value is in the eye of the bidder. But one thing is certain: Gibraltar is worth a lot less than it was when the government seized it 14 months ago.

"The franchise has deteriorated; they have lost a lot of core deposits," said one banker who has looked at the books. Added another: "Seized thrifts are like fresh fruit. They rot very quickly the longer they sit on the shelf."

Top regulators acknowledge that the value of thrifts continues to fall the longer they are run by the government. L. William Seidman, who runs the agency that oversees seized thrifts, wants to see more sold before they are seized, to avoid the automatic discount imposed by the marketplace. "We know that putting institutions under [government] conservatorship lowers their franchise value."

Gibraltar is an extreme example of how that can happen, because it has been under the government's care for more than a year.

Estimated Cost to Taxpayers

It is impossible to calculate exactly how much less Gibraltar is worth today than when it was seized. But some bidders that looked at the books last year when it was put into conservatorship say they are no longer interested. And the runoff of core deposits will cost taxpayers at least $10 million, according to conservative estimates.

The same thing is happening at other seized institutions. Richard K. Kneipper, head of Jones, Day, Reavis & Pogue's financial institutions practice, said one of his clients became frustrated after examining the books of a number of thrifts. "He is not going to bid anymore, the dissipation of value is so pervasive," Mr. Kneipper said.

Agency Is Hamstrung

"Most of the value is based on customer relationships," said Joseph A. Jolson, an analyst at Montgomery Securities Inc. "You have a custodian managing this in a competitive environment. It just doesn't work very well."

To be sure, all of the blame does not fall on Mr. Seidman's

Whose Assets Do Investors Value Most Highly? Synovus Financial

By KELLEY HOLLAND

NEW YORK — There are bigger banks. And there are banks with larger market capitalizations. But in the eyes of investors, Synovus Financial Corp. is, pound for pound, the most valuable banking company in the nation.

When market value – a source of bragging rights among bankers – is compared with asset size, Synovus, which has just $2.6 billion in assets, was far and away the nation's leader at the end of the first quarter.

Eye-Catching Numbers

Shares of the Columbus, Ga., banking company were worth $632 million on March 31, according to data supplied by SNL Securities. That was good enough for 59th place among the 100 banks with the largest market capitalization.

But Synovus' market value was equal to a whopping 24.3% of its assets. In effect, investors were valuing each dollar of the bank's assets at about 24 cents.

By contrast, Citicorp, tops overall with a market value of $7.5 billion, had a market-value-to-assets ratio of 3.2%. J.P. Morgan, in second place with a market value of $6.7 billion, had a ratio of 7.4%.

Among institutions with more than $10 billion in assets, Banc One Corp., Columbus, Ohio,

Fed Moves To Adopt Uniform Code For Payments

By JEANNE IIDA

NEW YORK — The Federal Reserve Board plans to bring the rules governing liability for Fed Wire transactions in line with measures being adopted at the state level.

If, as expected, both the Fed and the State of New York approve such measures, the majority of wholesale wire transfers could fall within a uniform body of law by the first of the year. The measures, designed to resolve disputes over electronic payments, would govern about $1.5 trillion of transfers each day.

Comments Solicited

The Fed's proposal, to incorporate Article 4A of the Uniform Commercial Code, will go out for public comment this month. The measure is expected to take effect Jan. 1.

Article 4A, which outlines rights and responsibilities of banks and their customers in electronic payments, has been adopted by a handful of states. But adoption by all 50 states is expected to take several years.

In New York, the measure is on the governor's desk and is ex-

NCNB Bid Seen As Winner for 9 Texas Banks

By STEVE KLINKERMAN

NCNB Texas National Bank won the bidding for the nine failing banks owned by National Bancshares Corp. of Texas, sources said Friday.

The nine South Texas banks together hold about $1.5 billion of assets, most of which are concentrated in San Antonio.

The acquisition will give NCNB Texas a dominant position in that market and further bolster its position as the biggest bank in Texas, with more than $35 billion in assets.

"They are a little bigger, a little stronger, and a little more dominant," said Frank Anderson, an analyst with Stephens Inc., a Little Rock brokerage.

The Federal Deposit Insurance Corp. put National Bancshares on the block after Pittsburgh-based Equimark Corp. failed to raise financing to acquire the failed institutions.

NCNB shares rose $1.125 Friday, to $39.875. NCNB and FDIC officials were unavailable.

SILENCE: Great American Bank cut funding to symphony.

Cash-Strapped Donors Turn Off Spigot of Charity Contributions

By TERESA CARSON

LOS ANGELES — Wesley Brustad did not need a phone call to tell him the money would not be coming this year.

The executive director of the San Diego Symphony Orchestra Association had read in the papers about the increasingly dire financial condition of Great American Bank, San Diego. He anticipated that the thrift's budget slashing would include its symphony contribution, which totaled $120,000 last year through a matching program.

The San Diego orchestra is one of hundreds of arts and service organizations feeling the pinch as financial institutions across the country cut their budgets. With loan losses mounting, some institutions find they can

COMMENT/ *By Paul Nadler*

Smart Managers Add Value To Act of Giving Raises

When a bank gives an employee a raise, it has an opportunity to earn goodwill and enhanced loyalty, but the opportunity is sometimes thrown away. In fact, some banks have even made advancement in pay and title an occasion that hurts morale rather than boosting it.

Most studies show that workers want recognition as much as or more than they want the money. They want to feel that the boss knows that they have been doing a good job and wishes to reward them for it.

This helps explain why, when a bank fires people, often the morale of the rest goes up rather than down. After all, if the bank has fired the right people – the incompetents and the slackers – the rest can say, "I made the cut. They know I am doing a good job."

Missed Opportunity

A raise can give the employee the same message. But some employers blow this opportunity to make the staff feel appreciated by following several poor policies.

The most obvious is merely to have the employee see that his or her paycheck is now higher. Not only does this eliminate the opportunity to let the individual know personally that he or she is appreciated, it sometimes even goes almost unnoticed. With all the withholding nowadays, there is not that much left on the bottom line to take home.

Some companies make the process of getting a raise humiliating. Raises are not given until asked for, and then the employee is made to feel that he is profaning motherhood and apple pie, much less almost bankrupting the company by his request.

Asking for a Raise

When I was economic consultant to a now defunct brokerage firm, I had not had a raise for seven years, and my friends told me that I would only get one if I asked for it. So one day I went into the CEO and said: "Steve, I haven't had a raise in seven years. I think I deserve one."

His response: "Absolutely impossible; we are in financial difficulty now."

I left his office and went about my business only to have him call me back into his office half an hour later.

"How much do you want, Nadler?"

I gave a response of something like 15% increase in my honorarium.

"Absolutely impossible," he said, "far too much." I left his office again.

Half an hour later I hear him call: "Nadler, get in here. You got your raise."

"Most studies show that workers want recognition as much as or more than they want the money."

I was rewarded, but in his effort to show who was the boss, the CEO took most of the joy out of it.

Black-Tie Bonus

Far worse was the policy of the old Hanover Bank, now part of Manufacturers Hanover in New York.

Raises and promotions for officers were only given at a black-tie banquet, once a year. If you didn't get it then, you had to wait an entire year for another chance. Believe me, there was plenty of drinking that night – both by the celebrants and by the disappointed. Those not promoted had the dejection of knowing they had 365 days to wait before another opportunity arose at CEO Bill Grey's annual dinner.

How different was the attitude of the CEO of Old Kent bank when I was their consultant in Michigan for 15 years. I remember coming to Grand Rapids one fall on my semiannual trip and saying to Dick Gillette, the CEO, "Dick, I haven't had a raise in five years, I think it's time."

His answer "No, Paul, it is only four years."

I left feeling great, even though I didn't get the raise. Because he knew how long it had been since I was given a raise, it was obvious that he cared enough to have checked up before I came to town instead of just taking my services for granted. The fact that he cared meant as much to me as the raise, as is the case with so many other people.

We can glean several rules from these experiences:

- When you give a raise, make something of the procedure. Show the workers they are appreciated so you give a morale boost as well as a pay boost.
- Frequent, smaller raises are appreciated more than infrequent larger ones, because there are more opportunities to stroke employees – whether officers or rank and file.
- Some companies when they reward those who have been on staff for several years provide the annual raise in a lump sum. This is usually far more satisfying than to be told you have a $2,000 raise and then just get a dribble more in your check each pay period.
- But most important, make a fuss, make people feel appreciated through this opportunity. Bankers must never forget that their most important resource goes down in the elevator and out the door every night. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

Banking expert Lowell L. Bryan of McKinsey & Co. caused a stir last month when he told the Senate Banking Committee that a recession would wipe out the capital of 20% of the nation's commercial banks and cause the Federal Deposit Insurance Corp.'s fund to collapse. The fund was at a historically low coverage point of 70 cents per $100 of insured deposits at commercial banks. Lisa A. Hammond of Medill News Service asked:

Q ***Is it likely that a recession will deplete the capital of commercial banks and annihilate the FDIC fund?***

■ Edward E. Furash
President
Furash & Co., Washington

This is probably the most difficult period for the entire financial system that I've seen in my 30 years as a banker and bank consultant. The situation could get worse if there were a recession that caused an increase in loan losses and a decline in interest income.

That's a big if, and a soft landing or a mild turndown can be weathered. What is particularly frightening is the speed with which capital can disappear under the current circumstances, such as problem commercial real estate loans, operating losses, and operating risk problems. This situation requires extraordinary caution and diligence by both bankers and regulators alike.

A loan loss or operating accident has the capacity to wipe out capital instantaneously. The system is fragile indeed.

The insurance fund is at risk in all of this – an insurance fund that is already at one of its lowest historic coverage points.

■ Robert Litan
Senior fellow
Brookings Institution, Washington

I think the real question is what would happen in a small to moderate recession.

I think a recession such as we saw in '81-'82 has a very low probability. In a recession of that magnitude, Mr. Bryan could very well be right.

Mr. Bryan is describing a very, very worst-case scenario. In a recession, the failure rate would go up. And there's no question that even a mild recession could cause some problems for the FDIC, because it is so thinly capitalized – but they have acknowledged that.

They are skating on the edge, and a mild recession could put them close to the edge or under the water.

■ Kathleen B. Cooper
Executive vice president
Chief economist
Security Pacific Corp.

I think it is much too negative an assessment. He's failing to consider that so many of the chargeoffs of the past four years have been LDC-related, and that's not going to be repeated. Only recently, in the past year, have the chargeoffs been related to commercial real estate.

There are tough predictions out there and banks have already set up sizable reserves. I have a lot of difficulty believing that this assessment would happen in a recession.

■ Paul M. Horvitz
Professor, banking and finance
University of Houston

I don't think that is realistic at all. We've had lots of recessions, historically, and they have not resulted in banks running losses in the aggregate. Also, banks are better positioned as far as loan-loss reserves.

I think that idea is based on possible losses from some of the highly leveraged loan transactions. But, in most of those transactions, banks have a senior position compared with holders of junk bonds. The idea of 20% of the capital being wiped out is just ridiculous. ☐

■ Allan H. Meltzer
Professor, Carnegie-Mellon University
Shadow Open Market Committee

It would take a heck of a recession [to see that scenario come to pass].

First, I don't think we're facing that type of recession – it isn't likely to be of the magnitude that would cause the type of losses seen in [Lowell Bryan's] remark. Second, the FDIC is in a weaker position than it should be, but it is much stronger than the FSLIC fund was at the emerging stage of the S&L crisis.

The recession would need to be at least as deep as 1981-1982 and perhaps deeper. And I personally am not anticipating one. ☐

CAPITAL

Synovus Tops Market-Value Ratio

Continued from *page* **1**

had the highest market value as a percentage of assets, 15.1%

Synovus' strength reflects its emphasis on nontraditional lines of business, at a time of pervasive worries about loan quality. The company, a major credit card processor, announced during the first quarter that it would be handling the processing for AT&T's Universal card.

"There are businesses considered by the market to be better than the banking business, and Synovus is in one of them," said John J. Mason of Interstate-/Johnson Lane, Atlanta. "The credit card processing business is vastly more attractive to investors than the banking business, no question about it."

A Measure of Strength

A bank's market capitalization is the price of its stock multiplied by the number of shares outstanding.

It represents the market's assessment of the bank's value and its ability to make acquisitions. The greater a bank's market value, the stronger an acquirer it can be and the more easily it can resist unwanted takeovers.

Because of a deep slump eroding share values, the 100 banks with the largest market capitalizations on average lost 9.3% of their value during the quarter, although many have since regained strength in the recent rally.

Total market capitalization of the 100 institutions dropped to $129.2 billion from $142.5 billion at year's end.

The two biggest gains were posted by Society Corp., up 42.8%, and CoreStates Financial Corp., up 26.5%. Both completed major acquisitions during the quarter. Synovus' market value grew 21.2% during the period.

Other Side of Coin

In contrast to those gains were dramatic declines for troubled banks such as Midlantic Corp., whose market capitalization declined by 47.6% from yearend, and Bank of New England, which lost 49.3% of its market capitalization.

Healthier banks also suffered. Citicorp's market value was off 19.7% from yearend 1989, while J.P. Morgan's dropped 17.0%.

Apart from companies closing acquisitions, many of the banks that posted increases in market value during the quarter focus, as Synovus does, on nontraditional lines of business. For example, Wilmington Trust Co., another major credit card processor, grew 4.2%.

How Regions Fared

In regional terms, West Coast banks fared relatively well, with Valley Capital Corp., Las Vegas, showing the biggest decline in market capitalization at 16.6%.

Banks in the Middle Atlantic states generally performed worse than those in other regions, with both Bank of New England and Shawmut National Corp. losing nearly half of their market capitalization.

Southwestern banks' performance was close to the average for the top 100, with a 24.1% decline at Hibernia Corp.'s market share offset by a 13.05% gain on the part of First Security Corp.

Industry experts noted that the decline in market capitalization helped to slow the pace of consolidation in the banking industry. During the quarter, as previously reported, just $706 million in merger deals were announced. That annualizes to $2.8 billion for 1990, far below the $10.8 billion of 1989.

"People have in their minds certain [price] targets because of past deals," said John F. Kooken, vice chairman and chief financial officer of Security Pacific Corp.

But any slowdown will be temporary, according to Arthur P. Soter, a managing director at Morgan Stanley.

"Lower market capitalizations can temporarily stall but not permanently delay the industry consolidation," he said. "The superregionals will get antsy for growth and realize that acquisitions are their only avenue."

Market Monitor

Bankers Trust New York Corp. said on Friday that it will soon issue $250 million in auction-rate preferred stock. The issue, which will count as Tier 2 capital, will be sold in four tranches and the dividend on the shares will be repriced every 49 days in a dutch auction.

A Bankers Trust official said a portion of the issue would not be underwritten but would instead be placed directly with investors. The remainder of the deal will be underwritten and sold by a group led by Shearson Lehman Hutton Inc. He declined to specify what proportion Bankers Trust would place directly. ☐

OTS Swamps RTC Plan for Coordination

By STEVE KLINKERMAN

DALLAS — Discord between the Office of Thrift Supervision and the Resolution Trust Corp. threatens to derail a plan proposed in March to streamline the rescues of perhaps hundreds of ailing thrifts.

Under the so-called accelerated-resolution program, the OTS would refrain from turning over a failing thrift to the RTC until that agency had found a buyer for the institution. RTC officials aim to install the program by June 30.

Troubled thrifts would fetch higher prices under this coordinated approach, the RTC said, because the institutions would retain many depositors, borrowers, and managers who otherwise might leave during a prolonged RTC conservatorship.

ANALYSIS:
Follow-up on the news

Analysts and observers of the thrift bailout have said the OTS is going overboard in placing thrifts under RTC control, acting regardless of whether buyers have been found or even sought. A former OTS official said the agency is shoving thrifts into RTC conservatorship quickly so it can cut staff, distance itself from controversy, and give greater attention to healthy thrifts.

OTS Seen as Creating Chaos

In the process, the trigger-happy OTS is creating chaos for the RTC, the experts said.

The RTC, set up by the the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, must arrange rescues for the more than 300 thrifts already under its control while launching an advance sales program for hundreds of additional thrifts qualifying for accelerated resolution.

Unless the OTS moves at a more deliberate pace, critics said, dozens upon dozens of troubled thrifts are headed for decay under needlessly prolonged RTC conservatorships. To the extent the units lose value, the government's rescue costs will rise.

'Out of Control'

"The process is out of control, and no one seems to be interested in what it is costing," said Jonathan Lindley, managing director in the Washington office of Ferguson & Co.

L. William Seidman, chairman of the RTC, began putting brakes on the runaway train in March. Mr. Seidman, who also is chairman of the Federal De-

1st Interstate Rumors Push Stock Higher

By FRED VOGELSTEIN

NEW YORK — Shares of First Interstate Bancorp soared Monday on takeover talk, leading a broad rise that propelled several bank stocks to their highest levels this year.

By late afternoon, the stock of the Los Angeles-based banking company was up $4.875, or 12%, to $44.875 on a second straight day of heavy volume.

First Interstate, which traded as high as $70 a year ago before stumbling on problem loans in its Texas and Arizona subsidiaries, is considered by many analysts as the most likely takeover target among major banks.

Rumors Discounted

"We hear rumors that Wells Fargo is about to launch a bid for First Interstate," said Raphael Soifer, an analyst at Brown Brothers Harriman. But having talked to both banks, he said, "I do not believe any of the rumors."

Officials at both Wells Fargo & Co and Security Pacific Corp. have expressed interest in ac-

Single-Borrower Limit To Be Relaxed by OTS

By DEBRA COPE

AP/Wide World
T. Timothy Ryan Jr.
Office of Thrift Supervision

WASHINGTON — In a bid to quell political pressure and complaints from home builders and lenders, the Office of Thrift Supervision is temporarily boosting one-borrower lending limits for the best-capitalized thrifts.

The residential construction market is being hurt by a provision of last year's S&L rescue bill that slashed thrift lending limits per borrower to 15% of unimpaired capital from 100%, bringing S&Ls in line with the standard for national banks. As a result, some builders have been unable to take further draws on lines of credit obtained before enactment of the Financial Institutions Reform, Recovery and Enforcement Act of 1989. Others are having trouble rolling over loans.

To provide some immediate relief, the OTS submitted an interim final rule to the Treasury Department and the Office of Management and Budget. The new rule permits thrifts that already meet 1995 capital requirements to lend the equivalent of 60% of unimpaired capital to a single borrower for domestic residential construction, according to a senior OTS official.

An OTS spokesman said 1,185 thrifts with $214.8 billion in assets currently meet the test. But thrift industry sources say they would like the OTS rule to allow any well-run, profitable thrift to take advantage of the exemption – even if its capital does meet not current standards.

Safety-and-Soundness Concerns

The relief measure is the first rulemaking attempt by the new director of the OTS, T. Timothy

AT&T Sending Some Applicants Gold Cards They Didn't Request

By YVETTE D. KANTROW

NEW YORK – Some consumers applying for AT&T's Universal card are getting a surprise in the mail.

In an unusual marketing gambit, American Telephone & Telegraph Corp. is sending a gold version of its combination credit and telephone card to select applicants – even if they did not request it.

To qualify for the gold Visa card, consumers must make more than $30,000 a year and have what the company deems an "impeccable" credit record.

Tight Targeting

The gold card program is yet another example of how the telecommunications giant is using its consumer marketing smarts

A Market In Bad Loans Takes Shape

By STEVEN LIPIN

Looking for a silver lining in the mounting number of big corporate bankruptcies, commercial banks are gearing up to trade nonperforming corporate loans in a fledgling market now dominated by Wall Street.

The trading activity, participants said, would be patterned after the growing market for lesser-developed-country loans. Last year, $60 billion in LDC loans changed hands, according to estimates by Shearson Lehman Hutton Inc. Some observers say the market in distressed corporate loans could eventually approach that magnitude.

Significant Profits Expected

"We believe the market is evolving and will approach the LDC debt market," said Jo Ousterhout, senior director and head of secondary loan trading at Continental Bank.

"We do see significant profit potential. But it will be a little while before the trading market gets going."

Continental Bank Corp. and

Asset/Liability Management: The Focus Changes for Banks

The environment of the 1990s will require commercial banks to continue revising the focus of their asset/liability management. During most of the 1960s banks focused primarily on asset management. Funds were obtainable at costs with regulatory ceiling, so that high-performing banks were generally able to employ their funds in high-yielding assets.

Banks tended to struggle more with the liability side in the 1970s. Many banks seemed to believe they could profitably employ funds if they could obtain them at anything like a reasonable cost. Finding funding sources (often circumventing Regulation Q) and managing the cost of funds became major asset/liability management objectives.

The rising and volatile rates of the late 1970s and 1980s changed the focus of asset/liability management to the maintenance of an adequate margin between the returns on assets and the costs of funds. The focus of maintaining an adequate interest margin, even if interest rates fluctuated widely, led to emphasis on interest sensitivity management, gap management, duration management, and simulation.

Asset/liability management became more complex because of the continuing trend to deregulation in the financial-services industry. Ceilings on interest rates were removed.

Banks and other financial intermediaries were allowed broader lending and borrowing powers. Competition among increasingly similar financial intermediaries, and between these institutions and direct financial flows without an intermediary, intensified.

By late 1980s the impact of deregulation, intensified competition, and weak management was enough to cause severe financial stress on banks in areas with weak regional economies and on much of the savings and loan industry. These problems will be more difficult to resolve and their cost higher than is now admitted. The impact on the restructuring of financial institutions and regulatory practices has just started and will be felt throughout the 1990s.

Trends for the 1990s

While it is impossible to predict the exact environment that will affect the focus of bank asset/liability management, many trends have started that seem highly likely to continue well into the next decade. Two of the changes are endogenous: 1) changes in the structure of the banking and financial services industry and, 2) changes in the regulatory environment. The remaining four changes are broad exogenous changes in the financial markets in which banks must operate.

The structure of the banking and financial services industry will change markedly. The number of all types of financial institutions will be dramatically reduced during the next decade.

Remaining geographic and business-activity barriers will be removed, and differences among types of financial institutions will largely disappear by the mid-1990s. Successive waves of acquisitions and mergers will produce major new financial institutions that will rival today's large money-center banks in prominence and size.

Passage of risk-based capital rules and of the Financial Institutions Reform, Recovery, and Enforcement Act in the late-1980s are probably the tip of the iceberg in coming regulatory changes. Reemphasis on capital, and relating capital required to the perceived risk of broad asset categories, becomes fully effective by 1993.

> **"Differences among types of financial institutions will largely disappear by the mid-1990s."**

The 1989 reform act encourages industry consolidations and strengthens the regulatory structure for likely future regulatory changes. The most likely regulatory changes are probably some type of risk-related deposit insurance and a shift toward market value instead of historical cost accounting for depository institutions.

Evolution of the Markets

Three changes in the financial markets in which banks operate stand out:

- The globalization of money and capital markets.
- The evolution of numerous new securities in these markets.
- The development of new secondary markets for many financial assets.

The second and third changes have led banks to securitize many financial assets.

The pace of globalization of the money and capital markets seemed to quicken during the very tight monetary situation of the early 1980s. In the early 1980s, larger banks could purchase funds and raise capital in nearly all the financial markets in the world. However, many bank customers did not have access to these money and capital markets.

By 1990, many medium- and all larger-size businesses in the United States and other countries had the choice to raise funds in financial markets throughout the world. The ability of larger American corporations to finance themselves in many markets has reduced banks' share in financing such corporations and reduced the interest spread banks earn on the portion of such financing that banks have retained.

Development of New Securities

Many new securities have been developed in the past decade or so. Furthermore, the rate of development appears to be increasing.

Early innovations, such as zero-coupon securities and bonds with put options, have been replaced with increasingly complex issues, such as bonds adjusted for changes in inflation and exchange rates and dutch-auction preferred stocks. I estimate that there were close to 100 new types of securities that first appeared in the 1980s.

Banks appear to be affected in at least three ways. First, they can issue and have issued such new securities to finance their own needs. Second, they can ac-

Gallery Rogue Back in Prison

Thomas Termatto, convicted of bilking six New York state banks out of more than $500,000, was sentenced last week to a minimum of 28 months and a maximum of seven years in prison.

State Supreme Court Justice Eugene Bergin also ordered Mr. Termatto, 33, to pay $511,000 in restitution to the banks and other victims who lost money because of his illegal activities.

In late 1984, Mr. Termatto led investors to believe he would be creating an exclusive art gallery on the top floor of a landmark skyscraper in downtown Rochester. The same site, he emphasized, had housed a prestigious gallery at the turn of the century.

According to prosecutors, Mr. Termatto told investors the gallery would act as a magnet to attract funds for a multimillion-dollar renovation of the historic building.

Mr. Termatto then obtained loans from a dozen different local banks, saying the money would be used to finance the gallery. He used the same portfolio of blue-chip stocks as collateral in each case.

The prosecutor, Monroe County Assistant District Attorney Kathleen Majewski, said Mr. Termatto sent the banks forged letters – on the letterhead of Mason, Lewis, and Grant, his New York broker – to verify his ownership of the stocks.

To promote the gallery – and himself – Mr. Termatto threw lavish parties at his home. The final soiree, in March 1985, was a grand-opening bash at the gallery. On that occasion, Ms. Majewski said, Mr. Termatto covered the walls of the gallery with paintings on loan from contemporary artists.

But the gallery never opened, and the bank loans were never repaid. Mr. Termatto fled on an extended vacation to Europe.

The lenders he victimized were Chase Manhattan Corp.'s Chase Lincoln First Bank, Rochester; Central Trust Co., Rochester, a subsidiary of Midlantic Corp.; Manufacturers Hanover Trust Co.; Marine Midland Bank; KeyCorp's Key Bank of Western New York; and First Federal Bank, Rochester.

To obtain the loan from First Federal Bank, Mr. Termatto pledged a luxurious BMW as collateral, but he was only renting the car, Ms. Majewski said.

Mr. Termatto was arrested and tried in 1987. He served 39 months in jail before a higher court overturned his original conviction, saying the trial court never adequately advised him of the perils of acting as his own attorney.

Following his second conviction, Ms. Majewski unsuccessfully asked the judge to impose a longer sentence, arguing that Mr. Termatto is eligible for parole almost immediately based on the time already served.

Securities Recovered in U.K.

British police arrested three men at London's Heathrow airport last week after $130 million of stolen bank securities were found in their baggage.

The 80 certificates of deposit found were part of securities valued at nearly $500 million that had been taken at knifepoint from a British money broker's messenger. The three men were all traveling to London on a British Airways flight from Dublin.

The Bank of England has issued a warning to banks worldwide concerning the stolen securities, which included CDs issued by a number of British and foreign banks.

— By John Evans

Lawyer Charged in Forgery

A lawyer from Manhasset, N.Y., was arrested last week on charges of fraudulently obtaining a $5.2 million loan from the Banking Center, Philadelphia, by forging signatures on promissory notes to convince bankers that he had backers in a limited partnership.

Attorney Gerald Cotter was approached in 1985 by a business acquaintance, Patrick Fawrley, who was seeking limited partners to develop houses in Bucks County, Pa., according to Nassau County assistant district attorney Connie Gentile. Mr. Fawrley, who had known Mr. Cotter for 19 years, has not been charged with any crime.

Mr. Cotter allegedly presented the Banking Center with documents naming 24 people who promised to invest $150,000 to $300,000 each. The documents included forged promissory notes pledging capital to the partnership.

But the partnership failed to make monthly payments on the $5.2 million loan in December 1987. When the bank tried to contact the investors whose names were signed to the promissory notes, it discovered the forgeries.

Defense attorney Kenneth J. Weinstein says that Mr. Cotter had no intention of defrauding the bank. □

Trading in Nonperforming Loans Gains Appeal for Commercial Banks

Continued from *page* **1**

Bankers Trust New York Corp. are already trading actively. And sources said Citicorp is looking at setting up a distressed unit, as are a number of foreign banks.

A spokesperson at Citicorp said the bank was not trading currently and declined further comment.

"There is not a great deal of activity yet, although there's a great deal of interest," said Arthur B. Schoen Jr., managing director at BT Securities Corp., the securities unit of Bankers Trust.

Bankers stress that the bad-loan market is not a way for them to dump their loans. Rather, they believe it is a way to complement their other bankruptcy-related activities such as workout groups and debtor-in-possession financing.

Essentially an offshoot of the thriving secondary market in which healthy loans are routinely sold, trading in distressed loans is still illiquid.

Nonstandard Documentation

While that creates inefficiencies that banks can take advantage of, it is also an impediment to growth. One big problem is that documentation, which is not standardized, is difficult to transfer.

The development of the market depends on the willingness of banks – weighed down with souring real-estate and leveraged loans – to sell loans at a discount.

The market includes actual nonperforming loans as well as performing loans to some companies that have stumbled. The loans of R.H. Macy & Co., for instance, are being quoted at sharp discounts by some traders, even though the struggling company is still current.

Banks Awaken to Market

Wall Street firms are the biggest players in the nascent market for defaulted corporate loans, but banks are now recognizing it as a market they cannot afford to ignore.

"There's a growing interest in the market of distressed situations," said Ms. Ousterhout, whose unit makes a market in bad loans. "But calling it 'trading' might be ahead of the market."

Ms. Ousterhout believes the roughly $200 billion in highly leveraged transactions will provide grist for the troubled loan market.

The size of the distressed-loan market is thought to be as high as $75 billion.

The pressure to sell down these loans is especially acute on regional banks, said Christopher L. Snyder, president of Loan Pricing Corp. He believes regionals will be a source of supply for the market because of the need to clean up their balance sheets.

They have borne "the burden of regulatory compliance," and investors and banks' boards of directors have put pressure on regional banks.

"They've been forced to sell at a discount," he said.

At the same time, demand is growing from savvy investors willing to wade through bankruptcy proceedings and workouts for the potential to receive as much as face value for defaulted, but secured loans.

T. Rowe Price Associates Inc.'s Recovery Fund LP purchases bank loans, as does the Foothill Group's new bankruptcy fund.

In addition, traditional investors in distressed bonds are becoming more interested in the loan market, said Ms. Ousterhout.

Market Makers

Such Wall Street firms as Bear, Stearns & Co. and Oppenheimer & Co. are known to make markets in distressed loans. Also active are the bankruptcy boutiques, Delaware Bay Co. and R.D. Smith & Co.

These institutions do not necessarily take positions in the loans. Often they act as brokers, matching buyers and sellers.

Historically, banks have been loath to sell loans at less than par, forcing them to take write-downs and set aside reserves for the losses, bankers say.

"Banks have tended to hang on until the bitter end," said one loan trader. The very idea of quoting corporate loans at a discount – like securities – is new to commercial bankers.

But the wave of troubled leveraged transactions, and increased regulatory concerns, have put pressure on banks "to raise cash and get the nonperforming assets off their balance sheet," said one bankruptcy specialist.

The size of the distressed-loan market is thought to be as high as $50 billion to $75 billion. Business failures, one proxy, surged to 49,719 in 1989 from 10,000 a year in 1980, according to Dun & Bradstreet Corp.

A study by Edward I. Altman, professor of finance in the Stern School of Business at New York University, tallied the total market value of private distressed debt at over $150 billion, with a book value of $225 billion. That includes private trade claims, private placements, and bank loans.

Mr. Snyder of Loan Pricing Corp., however, believes banks are better off holding onto loans rather than selling at a loss at inopportune times.

"Banks are selling just as others want to buy. Nonbanks are looking at credit trouble as an opportunity," he said.

He argues that banks should work to restructure loans instead of selling outright. "Banks are selling at the worst possible time," Mr. Synder said. ☐

Trump Organization Confirms Restructuring Talks with Banks

By WILLIAM GOODWIN

The Trump Organization, the main holding company of New York real estate developer Donald Trump, confirmed reports Monday that it is holding restructuring talks with its four major lenders.

The company is talking with the banking units of Citicorp, Chase Manhattan Corp., Bankers Trust New York Corp., and Manufacturers Hanover Corp., according to banking industry sources. The names of the banks and news of the restructuring talks were first reported in Monday's *Wall Street Journal.*

Though Trump is current on the bank loans, The discussions were prompted by the real estate downturn, and the banks' concerns that Trump's new Taj Mahal casino in Atlantic City, N.J., is not generating enough cash to cover debt payments, according to a source familiar with the situation.

Diversity of Lenders

However, the bank talks are complicated by the fact that Trump has "different institutions in different credits," a bank source noted.

"Currently, we are meeting with major banks and are having cooperative and constructive discussions," the Trump Organization said in a brief statement Monday.

"Based upon the excellent asset values and their long-term earnings potential, we are confident we will arrive at a mutually beneficial solution," the company added.

In apparent reaction to the front-page *Wall Street Journal* story, the press release began by saying: "The Trump Organization assets are among the best in America. They are unique, well positioned, and they have great long term value."

The Trump Organization calls its assets "among the best in America."

The *Journal* article called into question the value of Trump assets and the prospects of their sale at high levels. A Trump spokesman would not provide details of the bank talks, and Trump officials did not return phone calls. The banks also had no comment on the talks.

While Trump has an estimated $2 billion of bank debt, it is unclear how much is actually held by the four banks.

Chase, for example, provided first mortgages of $75 million for the Trump Tower as well as $200 million for Trump property on the West Side of Manhattan. But Chase subsequently sold off most of both loans.

Other Trump lenders include Japanese, German, and French banks.

"He's spread his exposure around," a banking source said. ☐

Bad Property Loans Soar in New England

Continued from *page* **9**

regions have tended to blame their real estate woes on the regulators.

"We did some complaining in 1985," he said, "But its a very real situation in the market that you have to deal with."

Officials of Bank of New England have said that its recovery from recent excesses may take years. The bank has embarked on a program that includes shrinking from $25 billion in assets to about $20 billion, setting up a collecting bank, and the sale of assets, including Maine National Bank and Bank of New England, Providence, R.I.

A Cluster of Problems

The Providence unit did not appear on the list of the banks with the greatest exposure of bad real estate to equity, but six of the eight Bank of New England units did at yearend, including the Maine subsidiary, which ranked 33d with bad real estate loans comprising 46.91% of capital. Bank of New England has since consolidated into only five units.

Thomas L. Lavelle, a spokesman for the holding company, said that company officials were confident the $151 million of reserves taken in the first quarter, although much smaller than the $1 billion taken the fourth quarter of last year, was "appropriate."

At the end of the quarter, he said, the company's primary capital – a broader measure of strength than equity capital, some bankers said, because it includes reserves – totaled $2.2 billion. Total nonperforming assets, primarily real estate loans, measured $2.25 billion.

A Trap in Demographics

"The major mistake by everyone up here is, they did not focus on the true demographics of New England," said James Moynihan, regional bank analyst for Advest Inc., Boston. "This is a region where we have zero population growth, and therefore one that couldn't possibly support the boom" that began in the 1970s.

"If the overall economy doesn't sink any further, I think [some New England banks] will be able to work out of it," Mr. Moynihan said. "But it's a good three- to four-year process, assuming things peaked in 1987."

One bank appearing for the first time on the Dec. 31 list was Dai-Ichi Kangyo Bank of California, Los Angeles, which had bad real estate loans equal to 39.65% of equity capital to rank 43d.

In another category, its ratio of bad real estate loans to total real estate loans was fourth worst after Bank of New England (27.22%) and two other small units of foreign banks, UBAF Arab American Bank, N.Y., 12.65%, and Bank of Tokyo Trust Co., N.Y., 8.11%. ☐

Solvent Texas Bank Units May Seek Bankruptcy Shield

By STEVE KLINKERMAN

DALLAS — In response to the Friday takeover and sale of nine of its 12 banks, National Bancshares Corp. of Texas as early as today will seek court protection under Chapter 11 of the U.S. Bankruptcy Code.

Attorneys representing the San Antonio-based bank holding company said National Bancshares hoped a bankruptcy judge would speed orderly settlements of some $35 million in creditor claims. Including its solvent banks in the South Texas towns of Rockdale, Laredo, and Eagle Pass, the company's assets are worth $5 million to $20 million, they said.

A key question in the impending bankruptcy proceedings is whether the Federal Deposit Insurance Corp. will try to exercise the "cross guarantee" provision.

Bailout Law Granted Right

With passage of the thrift reform law last August, the FDIC gained the right to seize assets of healthy bank subsidiaries to offset the costs of rescuing their failed affiliates.

The FDIC sold National Bancshares' nine failed banks to NCNB Texas National Bank, Dallas, in a transaction that ultimately could cost the agency more than $300 million.

Billing the three remaining healthy banks for that sum "would cause them to fail," said Robert Ott, a lawyer with Arnold & Porter who is representing the company. It hopes to persuade the FDIC to limit its claim to the $5 million it would stand to get if the three banks were sold, he said. ☐

BankAmerica's Arizona Deal May Set Pattern

By TERESA CARSON

LOS ANGELES — With the announcement last week that it would acquire a failed thrift in Arizona, BankAmerica Corp. joined two of its California rivals and several other out-of-state banking companies with stakes in one of the nation's most depressed real estate markets.

Unlike Security Pacific Corp., First Interstate Bancorp, and others that suffered sizable Arizona losses in recent years, BankAmerica enters the state with little, if any, risk. Like other buyers of failed thrifts, it has the option of returning to the federal government assets it does not want to keep.

ANALYSIS: *Follow-up on the news*

The deal is the kind that could attract others who want to buy into a region that has nowhere to go but up.

Buyers could include those who lost out in the thrift regulators' auction of Western Savings and Loan Association, Phoenix.

BankAmerica last week agreed to pay $81 million for Western's 61 branches and $3.5 billion in deposits.

Bargain Hunter's Paradise

Most of the rest of the Grand Canyon State's troubled thrift industry remains in regulators' hands after having drowned in real-estate-related red ink. The institutions eventually to be sold include MeraBank, Phoenix, with $4.7 billion in deposits, and Pima Savings and Loan Association, Tucson, with $2.1 billion in deposits.

If BankAmerica's first major foray into Arizona is any indication, the state has all the earmarks of a bargain hunter's paradise – a status it is likely to retain until its economy turns around. Most observers of the Arizona market say the real estate market remains at rock bottom and recovery is still months away.

Hopeful Sign?

But some view BankAmerica's entry as a hopeful sign.

'I think it means Arizona has a hell of a future," said Gordon Murphy, executive vice president of the Arizona Bankers Association.

"We are through the major downside. I am quite comfortable with that," said Richard J. Lehmann, chairman and chief executive of Valley National Corp., Phoenix. "But I can't tell you when we'll start to see things turn up."

Some are a little more opti-

In Profits, the Community Banks Leave Big Competitors in Dust

By YVETTE D. KANTROW

NEW YORK — Community banks face tougher competition from big institutions. And they complain bitterly about the rising cost of complying with regulations. But meanwhile, they continue to outperform the rest of the industry.

The return on assets at the average community bank increased to 1.19% last year, from 1.13% in 1988, according to an *American Banker* survey.

Smaller ROA at Bigger Banks

The 1989 return was 34 basis points higher than the average of other banks, whose ROA grew to 0.85% from 0.77%.

In each of the four years of the survey, community banks – defined as those with assets of $50 million to $200 million and owned independently or by a one-bank holding company — outperformed their rivals. In the latest year, 3,604 banks met that definition.

Three Key Factors

Experts attribute the success of community banks to three factors:

- Community banks can offer personalized service that larger institutions cannot match.
- The relationships they build enable them to accurately gauge their customers' creditworth-

Comptroller May Begin New Round Of Exams

By ROBERT M. GARSSON

WASHINGTON — Expressing concern about deteriorating loan quality in regions outside New England, Comptroller of the Currency Robert L. Clarke said Wednesday his agency might soon begin a new round of examinations of real estate loans by national banks.

"There are other places that have fallen into the condition of being overbuilt," Mr. Clarke told reporters after a hearing of the House Small Business Committee.

Sizable Increases Forced

He declined to specify which parts of the country he now has in mind but said their problems are not of the magnitude of New England's. Besides New England, the Comptroller's office has already examined the real estate portfolios of banks in the Southeast and Midwest, forcing some to make sizable increases in loan-loss reserves.

Earlier, in testimony at the House committee's hearing on credit availability in New England, Mr. Clarke said that when

Massachusetts Puts Interstate Banking on Hold

By JED HOROWITZ

NEW YORK — Massachusetts banks that are eager to repel out-of-state invaders won a victory this week when the state Senate voted to delay a nationwide interstate banking provision until Jan. 1, 1993.

The Senate bill conflicts with a House version passed in April that would allow banks outside New England to move into Massachusetts as soon as the legislation becomes law. A joint conference committee of the two bodies must now work out a compromise.

Industry officials predicted that the legislators will compromise on a trigger date of Jan. 1, 1992, for nationwide banking. But they expect banks will have the option of approving friendly takeovers early in 1991.

Connecticut and New Hampshire earlier this year passed nationwide interstate banking bills, leaving Massachusetts the region's sole holdout. Massachusetts has allowed reciprocal

Warnings of Losses on FHA Loans Prod Kemp to Call for Higher Fees

By DEBRA COPE

WASHINGTON — Spurred by warnings that the government's flagship program for first-time home buyers could become insolvent, the Bush Administration called on Wednesday for most borrowers to pay higher fees for FHA mortgages.

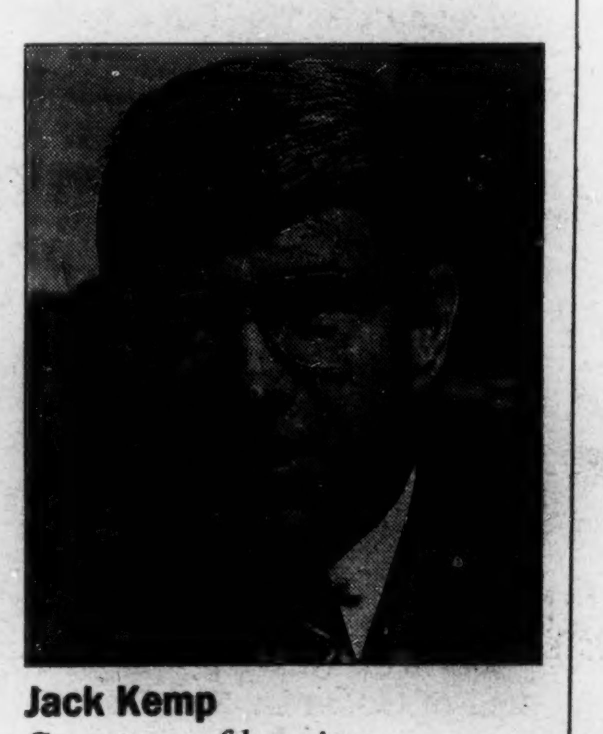
The plan is intended to minimize the possibility that the Federal Housing Administration's mutual mortgage insurance fund could require a taxpayer bailout by the end of the decade.

$271 Billion Insured

That fund is the FHA's largest that guarantees loans for single-family homes. The fund insured $271 billion in loans as of last September.

The General Accounting Office said Wednesday its audit of the fund showed a loss of $1.4 billion in the fiscal year that ended in September 1988, and the likelihood in the near term of a continued high rate of foreclosures.

As part of a plan to revamp the fund, Jack Kemp, Secretary of housing and urban development, recommended imposing risk-based mortgage insurance premiums and ending the financing of most closing costs.



Jack Kemp
Secretary of housing

The fund needs to increase its income by $760 million a year to offset growing losses and rebuild equity. It was not clear how much fee income the proposals would provide.

COMMENT/ *By Melvin L. Burstein*

Banking System Safeguards Should Not Be Dismantled

" . . . along with the dismantling of these archaic laws, public policy officials concerned over U.S. competitiveness must overcome unfounded trepidation over the separation of finance and commerce."

— March 22 testimony of L. William Seidman, chairman, Federal Deposit Insurance Corp., before the International Competitiveness Task Force, House Committee on Banking, Finance, and Urban Affairs

Mr. Seidman testified that without his recommended changes to U.S. banking structure and powers, the U.S. banking system will lose its ability to compete in the global financial market. That loss will "weaken the viability of our banking system and . . . the economic strength of our nation worldwide," he maintains.

Mr. Seidman, who is not alone in his assessment, would go further than almost anyone else in restructuring the U.S. banking system and enlarging bank powers. He urges "dismantling of . . . archaic laws" – including Glass-Steagall, which separates commercial and investment banking, and the Bank Holding Company Act, which separates banking and commerce – to enable the formation of so-called universal banks.

Banks Are Special

I have to wonder if Mr. Seidman and others have lost sight of why banks are subject to these and other laws regulating the way they do business.

The thesis of an essay by E. Gerald Corrigan, the immediate past president of the Minneapolis Fed and current president of the New York Fed, published in my bank's 1982 annual report, captures what I believe is the reason for such laws:

Banks are special. The banking system has a special place and set of functions in our economy.

The "archaic laws" Mr. Seidman refers to, among others, were put in place not to develop the largest or the most profitable banks in the world, but to provide a safe and sound banking system for the benefit of the U.S. economy. Anyone advocating major changes to banking structure and powers should have the burden of proving the need to do away with the legal structure intended to protect the U.S. economy from a major disruption in the banking system.

In 1913 Congress passed the Federal Reserve Act, the first piece of banking legislation of this century to address the country's repeated banking panics. Among other things, it established a central bank system to provide liquidity to banks as needed to provide stability.

In part because the Federal Reserve didn't properly use its power to provide liquidity, thousands of banks failed during the early 1930s. As a result, Congress enacted the banking acts of 1933 and 1935, which included the National Bank Act, Glass-Steagall, the federal deposit insurance system, and significant amendments to the Federal Reserve Act.

To further protect the banking system, Congress passed the Bank Holding Company Act of 1956 to separate banking from commerce. In 1970, that law was amended to include corporations owning even a single bank.

No Dropouts

Like public utilities, banks are not allowed to operate unfettered in the marketplace; rather, they are given a limited market advantage of a geographic and activities franchise. In addition, they derive a market advantage from the federal safety net of deposit insurance and access to borrowing from the Federal Reserve.

These market advantages must still have value, because despite all the market opportunities allegedly now denied U.S. banks, I am not aware that any bank has relinquished its charter to engage in other business.

Economy Is Vulnerable

No one familiar with the yet unresolved thrift problem and numerous and substantial bank failures of the 1980s should have any doubt about the economy's vulnerability to misadventures in the banking system.

Driven at least in part by deregulation of some activities and fueled by problems inherent in deposit insurance, these misadventures caused the insolvency of the Federal Savings and Loan Insurance Corp., the diminution of the reserves of the Federal Deposit Insurance Corp., and a huge but undetermined addition to the federal deficit.

Need for Change Unproven

I have reflected at length on the alleged competitive problems confronting U.S. banks to understand what could justify the advocated changes in spite of these problems of the 198Os. The allegations are unsupported

See **COMMENT** *page* **15**

"No one familiar with the yet unresolved thrift problem and numerous and substantial bank failures of the 1980s should have any doubt about the economy's vulnerability to misadventures in the banking system."

Mr. Burstein, senior vice president and general counsel of the Federal Reserve Bank of Minneapolis, is its senior officer over banking supervision.

THE LOBBYISTS

Sensing a Crisis, The Home Builders Step Up Their Efforts

Driven by a growing sense of crisis in the housing market, the **National Association of Home Builders** has stepped up lobbying of the federal banking regulatory agencies.

Frequent trips to the Office of Thrift Supervision spawned one notable success – a soon-to-be-issued rule easing limits on loans to one borrower. Surveys by the 157,000-member group show builders are pinched by credit tightening by banks and S&Ls.

Now the association is urging the thrift regulation office to loosen risk-based capital rules for construction loans-in-process. OTS districts want S&Ls to fully cover untapped portions, although banks hold only 50% capital for the off-balance-sheet liabilities. Builder lobbyists on Monday briefed **Jonathan Fiechter,** OTS's second-in-command, and **John Robinson,** senior policy official.

Jonathan Flechter

Builder association officials have trooped to the thrift regulation office twice to meet with director **T. Timothy Ryan Jr.,** but two other banking regulators have come to them.

FDIC Chairman **L. William Seidman** and Comptroller of the Currency **Robert L. Clarke** spoke at the builders' May board meeting in Washington.

Introducing Mr. Clarke, association president **Martin Perlman,** a Houston builder, noted they once served together on the board of a Texas bank and boasted of teaching Mr. Clarke all he knows about construction lending.

A Supplemental Plan Of Deposit Insurance

With deposit insurance reform under serious review by the Treasury Department and sure to be a catalyst for major financial legislation next year, it's no surprise that a wide spectrum of industry players are trying to shape the reform debate. On Wednesday, **Peter J. Wallison** — former White House counsel to President Reagan and chief counsel at the Treasury Department under Donald Regan — entered the fray by offering his concept of private, supplemental deposit insurance. At a discussion at the **American Enterprise Institute** think tank here, Mr. Wallison, now a lawyer with the firm of **Gibson, Dunn & Crutcher,** explained his "supplemental deposit protection" system.

Peter J. Wallison

The system would rely on the earnings and capital of the banking industry to guarantee 100% of the deposits and liabilities of participating banks. The Bank Insurance Fund and Savings Association Insurance Fund of the **Federal Deposit Insurance Corp.** would remain as "backup insurers" for all deposits up to $100,000. "Too big to fail" issues would be resolved because all deposits and other liabilities of banks and S&Ls with assets over $1 billion would be guaranteed.

Since the system is voluntary for smaller institutions, these banks and S&Ls could continue with the current system, he argues. Mr. Wallison's views are similar to those of consultant **Bert Ely,** who is publishing his reform ideas in concert with the U.S. Chamber of Commerce.

Manufacturers Group Taps a Citicorp Exec

Charles Long, Citicorp's corporate secretary and head of the banking concern's Washington operation, has been named to the board of directors of the **National Association of Manufacturers.**

A spokesman for the trade group said Mr. Long is not the first banker to serve on the 210-member board, but said he is one of the few. "We're involved in lobbying on corporate governance and tax issues that are of interest to banks," the spokesman said.

* * *

Hunter Heads Bank Directors

A former **Federal National Mortgage Association** chairman, **Oakley Hunter,** is spearheading a newly formed association for bank directors.

Mr. Hunter, who is a director of a small bank in Bethesda, Md., is president of the **American Association of Bank Directors,** a group formed not only to educate bank directors, but to lobby for changes in the Financial Institutions Reform, Recovery, and Enforcement Act passed by Congress last summer.

The job of directing a bank or savings and loan has become increasingly risky because directors are now subject to huge civil penalties under the act.

"The feeling among the directors is that they needed representation," said **David H. Baris,** a partner in the Washington law firm of **Kennedy & Baris,** who is assisting in the group's startup.

After opening a month ago, the association is already looking at possible amendments to the new law concerning the money penalties against directors who have no knowledge of violations, Mr. Baris said.

The association also intends to conduct a survey of banks to determine whether directors have resigned because of the reform act, and whether banks are having trouble attracting new directors because of the law.

Data Source: Data are from the federal regulatory "Reports of Condition and Income" filed by all federally-insured commercial banks. **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex., was used to generate the listing. **Community Bank:** An FDIC-insured commercial bank that is independently owned, or owned by a one-bank holding company, and has assets between $50 million and $200 million on Dec. 31, 1989. The bank must be profitable in each of the last three years 1987-1989. U.S. bank subsidiaries of foreign banks are excluded. **Returns on Average Assets and Average Equity Capital:** net income for the year divided by average assets and average equity, respectively. **Overhead as a % of Assets:** overhead expense divided by average total assets. **Loans as a % of Assets:** total loans divided by total assets. **Deposit Growth Rate:** the percentage change in deposits over the period Dec. 31, 1986, to Dec. 31, 1989. **Net Income:** income after taxes but before extraordinary items. **Net Income Per Employee:** net income divided by the number of employees at the end of the period. (★) — Owned by a 1-bank holding co. (‡)— Data for 1987 were used because the 1988 data were sharply higher due to capital gains. (¹)— Annualized data for 9/88. **Compiled by American Banker, Copyright 1990.**

Community Banks Still Outperforming Big Competitors

Continued from *page* **1**

iness.

- The nation's agricultural economy – a major source of business for many community banks – continues to strengthen.

Impressive Returns

These points have helped the 100 most profitable community banks maintain an impressive average return on assets of 2.23% in 1989, on par with the 2.27% reported in 1988.

In contrast, the most profitable money center – First Chicago Corp. – reported a return on assets of 0.74% in 1989, while the 21 out of 26 superregionals profitable last year had an average return of 0.94%.

Commitment to Customers

Whether their primary business is consumer or corporate lending, many community bankers say it is their commitment to their customers that has enabled them to fend off competition from larger banks that enter their markets and charge less.

"Some of the chains will come in and cut rates to get their foot in the door, but they won't stay in the marketplace very long," said James R. Daniel, president of Friendly Bank in Oklahoma City. "We can compete with that pretty effectively."

Quick Answers on Loans

David Wierchering, vice president of the $66 million-asset San Benito Bank & Trust Co. in Texas said, "We don't have to go to Dallas or Houston to get an answer on loans."

> **"If a $35 million bank has to spend $35,000 for a compliance officer, that's a lot."**
>
> **Kathleen Murphy**
> *American Bankers Association*

That means that the bank can turn around loan approvals faster than its competition – which includes the Texas affiliates of NCNB Corp. and Chemical Banking Corp. – and that customers will come back for more.

Industry is Shrinking

But even though their lending operations remain strong, community bankers fear that their industry is contracting. According to the Independent Bankers Association of America, there are 12,600 banks in the United States, down from 14,209 at yearend 1986.

Moreover, there are expected to be only 11,000 by yearend 1992, and many that disappear are expected to be small, independent banks.

Compliance Costs Rising

In addition, the cost of complying with regulation is driving up operating expenses at community banks.

According to a 1989 study by the American Bankers Association, banks typically spend 1% to 4% of their annual net income on regulatory compliance. And the smallest banks are believed to be hit the hardest.

"Staff resources are the burden," said Kathleen Murphy, director of the Community Bankers Council at the ABA. "If a $35 million bank has to spend $35,000 for a compliance officer, that's a lot."

According to the trade group's study, a bank with a staff of 10 needs to devote at least half of one employee's time to compliance issues.

Rookie Examiners

Laws like the Community Reinvestment Act can require labor-intensive recordkeeping operations. And even routine portfolio exams can trip up institutions.

"The smaller banks have the honor and the privilege of being examined by rookies that have just gotten out of supervisory school' said Kenneth A. Guenther, executive vice president of the Independent Bankers Association.

Overhead Going Up

Though community banks typically boast lower overhead than their larger counterparts, their expenses are rising faster.

At the 100 most profitable community banks, overhead equaled 3.06% of assets, up from 2.48% in 1988. That rise contrasts with stability at the average U.S. bank; the all-banks average was 3.40% of assets in 1989, 3.36% the year before, according to Sheshunoff Information Services, Austin, Tex.

A key factor for community banks has been the agriculture rebound. "The big plus in terms of community banking is that agriculture has been healthy," said Mr. Guenther. "And they have not been cursed by LBOs and LDC debt."

According to the Federal Reserve Board, the profitability of agricultural banks rose 10 basis points last year, to 1%. Moreover, profitability of agricultural banks has risen 60 basis points since 1986.

For small nonagricultural banks, the one-year rise was sharper – 20 basis points, to 0.9% of assets – but the increase since 1986 was only 30 basis points, half the agricultural banks' gain.

The survey also found that:

- The nation's top-performing community bank was Kentucky-Farmers Bank, Catlettsburg. The $105 million-asset retail bank had a 3.52% return on assets.
- Last year the 100 most profitable community banks averaged a return on average equity (ROE) of 19.67%, total assets of $89 million, total deposits of $76 million, net income of $1.8 million, and 45 full-time employees. In 1988, the top 100 averaged ROE of 18.52%, $83 million in assets, $70 million in deposits, and 41 employees. □

SERVICE
IS NOT
A THING
OF THE PAST

You can still find it at Balboa Life and Casualty.

In fact, we don't just talk about providing service.

We impose the strictest of performance standards in such key areas as customer contact, information processing and response to service requests.

For instance, every one of the 800,000 documents we receive monthly from our customers is processed within 48 hours, with over 99.8% accuracy. Our service representatives, who receive over 120,000 phone calls each month, are continually trained and monitored.

So you and your customers can count on fast, courteous service as well as virtually flawless precision.

At Balboa Life and Casualty, we approach business with the values of the past. We find the future looks better that way.

For more information, call David de Gorter, Marketing Director at 714-553-7692.

Rx for Thrift Ills: Generate Fees And Cut Costs

By SANFORD ROSE

The average thrift in the country is at least 25 basis points shy of breakeven and perhaps 40 basis points shy of economic viability, according to a rough but perhaps not unrealistic analysis.

Yet it may be possible for many thrifts to temporarily make up all, or nearly all, of this economic shortfall, not in ways usually envisioned but rather through a combination of draconian expense reduction and nontraditional fee generation.

The average home-mortgage-oriented thrift cannot look forward to an especially lush net interest margin. Indeed, according to some analysts, the spread on mortgage loans is probably negative, if one makes allowance for the cost of match-funding and for the cost of the borrower's option to prepay without penalty. Many thrifts, however, report a positive spread precisely because they aren't match-funding and they don't factor out the cost of the prepayment option – an estimated 50 to 75 basis points.

Comment

Profiting from the Premium

But at times during the past decade, the spread on mortgage loans has been marginally positive, even on a match-funded basis. Additionally, mortgage lenders can eke out a supplementary spread from their liquidity portfolios. And a case can be made that liquidity assets should not be match-funded.

It can be argued that some relatively safe extra profits can be garnered by mismatching in the under-one-year part of the yield curve, provided this is done in conformity with the liquidity premium. In other words, since there is a liquidity premium in Treasuries that reaches a maximum around the one-year maturity – that is, longer Treasuries command structurally higher yields than shorter ones – a thrift that mismatches between, say, very short liabilities whose rates are tied to Treasuries and one-year T-bills will of course earn more money than if it simply match-funds.

This type of mismatch creates some interest rate risk, but not a great deal, and the mismatch is likely to prove successful more than 50% of the time. In order to take advantage of this opportunity, a thrift should probably shorten the maturity of its non-Treasury liquidity assets (since these do not contain a liquidity premium) while simultaneously lengthening, up to a year, the

Moody's Investors Service on Monday lowered its ratings on the debt of Chase Manhattan Corp. and some of its units, citing deteriorating quality in Chase's commercial real estate portfolio.

Agency Halts 1-Borrower Rule's Easing

By ROBERT M. GARSSON

WASHINGTON — The Treasury Department has put on hold a proposal by the Office of Thrift Supervision to phase in new limits on the amount a thrift can lend to one borrower, industry sources said Monday.

Treasury officials were taken aback at the negative reaction prompted by early reports of the proposed interim rule and have decided to delay a decision on it, the sources said.

Post Editorial Roils Waters

Of particular concern to Bush administration officials was an editorial in the *Washington Post* calling the rule "grotesque" and arguing that it harkens back to the tradition of forbearance that helped bring on the thrift crisis.

However, the government is under considerable pressure from lenders and the politically powerful home construction and development industry to adopt the less stringent phasing in. As a result, the department could decide fairly soon to bless the plan.

"It's not really a thrift issue so much as it is a homebuilders' issue," said one thrift lobbyist. "Because of that, everybody wants some wiggle room."

The thrift-bailout law passed

RTC to Market Assets In $500 Million Pieces

By DEBRA COPE

WASHINGTON — In its latest appeal to institutional investors, the Resolution Trust Corp. plans to market bad loans, junk bonds, and other hard-to-sell financial assets from failed thrifts in $500 million chunks.

The agency is also likely to reduce down payments and ease other terms in its seller-financing program. Both measures would be part of a stepped-up effort to attract buyers of assets seized by the thrift-bailout agency.

Making Assets Marketable

Through the bulk-sales approach, the agency will move loans and other assets that are not readily marketable, RTC Chairman L. William Seidman said in a telephone interview Monday. These assets include junk bonds, derivative securities, real estate, and a sizable amount of bad loans.

Roughly half of the workout agency's $174 billion-asset portfolio consists of loans that are nonperforming or do not meet the underwriting standards of the secondary mortgage market, Mr. Seidman said.

Investment analysts said pension funds, insurance companies, and other big investors find it inefficient to buy up RTC assets piecemeal and will be more likely to bid on bulk sales. The RTC will also improve financing terms to accelerate sales.

The RTC's Holdings

Assets in conservatorships, dollars in billions

Wooing Institutions

"This is where the institutional money comes into play," Bert Ely, a consultant and close watcher of RTC activities, said of the bulk sales approach.

Mr. Seidman concurred, saying he hopes, with the bulk sales, "to attract large buyers."

The RTC will ask its policy-setting body, the RTC Oversight Board, to authorize expanded seller financing to augment the sales, he said.

Currently, the RTC may extend financing to buyers only if no other loan is available. A 15% down payment is required; the

Breeden Turns SEC Sights on Banks, S&Ls

By BARBARA A. REHM

WASHINGTON — Banks and thrifts are facing heightened scrutiny these days from an unusual source – Richard C. Breeden and his Securities and Exchange Commission.

The agency is in the midst of a sweeping investigation of financial institutions' compliance with securities laws. Of particular interest is whether potential loan losses are being disclosed adequately to investors.

Some bank attorneys are worried about the probe, in part because of the possibility of embarrassing publicity. The SEC publicly announces the results of its investigations – a big switch from the hush-hush approach of bank and thrift regulators.

But observers also wonder how muscle flexing by the SEC, traditionally a bit player in bank supervision, might change the regulatory balance of power.

Mr. Breeden is already on the record as saying the SEC should supervise the securities activities of bank holding companies – such as the underwriting of commercial paper and corporate debt – which are now regulated by the Fed.

Van Howell

Some believe that Mr. Breeden, who became SEC chairman eight months ago, has an even larger agenda: to make the SEC the top regulator of bank and thrift holding companies.

Sees Larger Role for Agency

Mr. Breeden scoffs at that speculation. But the 40-year-old lawyer, who has close ties to President Bush and helped develop the administration's thrift-bailout plan, acknowledges that he sees the SEC playing a larger role.

The SEC chairman figures to be a key player in the debate on Capitol Hill next year over how to reform the financial services arena. So his views are being carefully watched.

For one thing, he does not think that banks deserve special treatment when it comes to complying with securities laws.

PEOPLE *in the news*

Contractor Caught in Web Of RTC's Thrift Cleanup

By RICHARD LAYNE

Robert Foraker had his business stripped away by the Resolution Trust Corp., and there does not appear to be anything he can do to get it back.

Mr. Foraker owns a computer software and consulting company in Canton, Ohio. He is caught in the middle of the massive, sometimes messy cleanup of the thrift crisis.

As a contractor to the failed Broadview Savings Bank in Cleveland, he fell victim to one of the extraordinary powers that Congress granted the thrift-bailout agency – the ability to cancel preexisting contracts. The same policy allowed some seized thrifts to lower the interest rates they had committed to pay on certificates of deposit.

Mr. Foraker has considered becoming the first to take advantage of an obscure provision in the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 that allows parties aggrieved by the bailout to sue the government for compensatory damages.

Legal experts say Mr. Foraker has little chance of regaining his contract through the courts. Some have described him as quixotic and unlikely to represent a reliable test case of the RTC's power to abrogate contracts. But the fact remains that the bailout has hurt his systems consulting company.

Before Broadview went under – its deposits have since been assumed by Society Corp. – Mr. Foraker sued Broadview over his contractual right to market software developed at the savings bank.

> **"I've risked everything. I may be one of the homeless, but I won't quit."**
>
> **Robert Foraker**
> *I&I Group Inc.*

While Mr. Foraker views the RTC's discontinuation of his contract as a moral injustice, he says the RTC is so big and powerful that a lawsuit might be counterproductive.

"I have too much business potential with the government," said Mr. Foraker, who believes he can sell processing business to the RTC in its role as manager of thrifts.

Until last fall, Mr. Foraker's I&I Group Inc., a two-man operation, was in business to sell banking software developed at Broadview Savings before it became a ward of the government.

20 Years in Business

A technology consultant and software specialist for 20 years, Mr. Foraker, 45, had helped developed systems for several banks in Ohio, although not for Broadview.

The RTC sent him a letter on Nov. 17, 1989, that discontinued the marketing contract between the bank and I&I Group.

Mr. Foraker said he lined up investors and marketing agreements with other companies. He said he invested $5 million to get the software ready to market. Much of that money went to purchase an IBM computer to run the software.

"I've risked everything," he said. "I may be one of the homeless, but I won't quit." He accused the RTC of canceling his contract so it could peddle the software as part of Broadview's assets. RTC officials scoff at that charge.

Software Not an Issue

"When we are sitting down with bidders on a $1.5 billion institution, the existence of a software package that may or may not have a marketing agreement attached to it is not going to make or break our ability to sell an institution," said an RTC spokesman.

The bank acquiring Broadview could sell the software that comes with it, the spokesman said. It could even sign a new contract with Mr. Foraker to sell the system.

Mr. Foraker was committed to pay Broadview $300,000 for the exclusive rights to market the software, in installments, whenever he makes a sale. According to the bank's records, Mr. Foraker had paid only $20,000 of that obligation.

Litigation on All Sides

Mr. Foraker said he paid off only a small amount because he was forced to seek bankruptcy protection in 1988 – caused by legal expenses related to an earlier contract dispute with Broadview.

He eventually settled the dispute, which reaffirmed his right to sell the software. Meanwhile, the bankruptcy washed away his debt to the bank.

"The RTC could argue that it was a burdensome contract," said Richard Kniepper of Jones, Day, Reavis & Pogue, one of several lawyers who think Mr. Foraker has little chance of prevailing. "He didn't pay and he took bankruptcy. He isn't reliable."

Mr. Foraker's bad luck from past dealings continues.

In 1988, he made his only sale of the software, for $30,000, to City Federal Savings and Loan in New Jersey. He said he sold cheaply to get cash for the legal costs of his Broadview dispute. City Federal agreed to supply him with a new version of the software, which would run on a more powerful IBM system.

City Federal went into receivership in January 1990. It is doubtful that Mr. Foraker will receive the new software. □

Don't Change Privacy Law, Consumers in Survey Say

By LINDA CORMAN

WASHINGTON — Most American consumers agree with the credit-reporting industry that existing privacy laws ought to be more energetically enforced before new, tighter laws are enacted, according to a recent Louis Harris & Associates survey.

The poll commissioned by Equifax Inc., a leading credit-reporting company, found Americans are more concerned than ever about corporate and governmental threats to privacy. But the handling of individual credit histories is not among their gravest concerns.

While seven of 10 say consumers have lost control over the personal credit information that companies exchange, about two-thirds say they have a high or moderate degree of trust in the way credit bureaus and insurance companies use information on individuals.

Equifax released the results Monday, a day before three bills aimed at broadening disclosures of consumer credit were to be debated in a hearing of the House Banking Committee's consumer affairs and coinage subcommittee. The Harris organization surveyed 2,264 consumers and 916 business executives from January through April.

Present System Favored

In the findings, Atlanta-based Equifax found support for the view that before new privacy laws are adopted or existing laws amended, consumers should be better informed about the rights they have. The survey found that 55% favor protecting con-

Freddie Mac Expected to Cut Pass-Through Period

By PHIL ROOSEVELT

NEW YORK — In a move that could attract more securitization business from lenders, the Federal Home Loan Mortgage Corp. is expected to announce today a fundamental change in the structure of its mortgage-backed securities.

Industry sources said that Freddie Mac, as the agency is called, plans to reduce markedly the time it takes to give investors their first monthly payments. That, in turn, would probably increase the securities' prices, helping originators who swap their loans for securities and then sell the securities.

Currently, investors in Freddie Mac securities do not get their first payments until 75 days after the securities are issued, versus 55 days for securities of the Federal National Mortgage Association, or Fannie Mae. As a result, analysts said, investors pay slightly less for Freddie Mac securities.

At a press conference slated for this afternoon in New York, Freddie Mac will announce a reduction of its payment period to as little as 45 days, according to sources who requested anonymity. The change would affect all new issues, the sources said, and holders of outstanding issues may get the option to convert to the new structure. A Freddie Mac spokeswoman declined to comment.

Separately, the agency is expected to announce a large securitization deal with Citicorp, the nation's biggest originator and servicer of home mortgages.

Big Citicorp Deal Predicted

Some sources speculated the deal would top a transaction that Freddie Mac carried out last month with Great Western Bank, continuing a trend of bigger and bigger securitizations.

The Great Western transaction, involving $1 billion in mortgages, was the largest securitization ever done by Freddie Mac in one step.

Spokeswomen for Citicorp and Freddie Mac refused to comment. □

COMMENT/*By Charles R. Haywood and Charles E. Wilson*

Managing Change Is the Key to Survival

U.S. banks are facing economic, political, and technological changes that could cause "future shock," the term Alvin Toffler coined in 1970 to describe the extreme disruption and dysfunctional behavior resulting when change occurs so rapidly that it cannot be assimilated.

Aggressive managers can turn this potential crisis into opportunity. The challenge, however, is formidable.

Banks must adapt to accommodate the external changes of shifting demographics, deregulation, and global competition as well as new technologies. Yet they cannot do that successfully unless they also effectively manage the internal impact of these changes.

Five Critical Factors

To develop a strategy for change, managers must get a handle on the five factors that are shaping banks and other financial institutions as the 21st century draws near.

- Global competition is becoming an issue for all banks as financial institutions around the world become more involved in nontraditional products.

Also, product and service expansion in the United States by foreign institutions will lead to more mergers among U.S. banks and to increasing affiliations with mortgage lenders, insurance companies, and other financial services providers.

These new alliances will challenge banks to create a harmonious management environment as different corporate cultures come together.

- Banks face a personnel crisis because of slowing growth in the U.S. labor force. As entry-level labor becomes more expensive and harder to find, managers will be forced to apply new technologies to improve productivity and streamline operations.

Furthermore, the need for well-designed programs for professional development of present employees must be given high priority.

- New technologies and service-delivery mechanisms also can help meet the impending workforce problems. Banks will be compelled to implement these new technologies to contain costs and provide competitive services in response to customer demands.

- In the face of increasing competition from nontraditional financial services providers and foreign firms, banks must focus on growth strategies that are based on customer needs and not just on the expansion of product offerings or adding new customers.

Developing a sales culture that is driven by customer needs, in which traditional "order takers" become "order getters," is imperative. For many banks, this is foreign territory: outside help may be required.

- To address the rapidly changing regulatory environment in the United States and abroad, banks and other financial intermediaries must develop ways to comply with regulations while quickly adapting operations to meet competitive and economic challenges.

"Banks must focus on growth strategies that are based on customer needs."

Charles R. Haywood
ODR Inc.

Financial institutions would be well advised not to merely anticipate the changing regulatory environment but to constructively influence the direction of legislation.

Beyond Intuition

Many bank management teams have, in the past, guided their institutions through difficult transitions. Yet when asked how they were so successful, many managers are unable to articulate the specific techniques or skills they employed.

These "unconsciously competent" managers possessed intuitive skills derived from long experience. Our research shows that those who manage change have a number of characteristics in common.

They understand what motivates change. Just because a contemplated direction is interesting or intellectually stimulating is no guarantee that the process of change will succeed. Change is motivated only by pain.

People or organizations will not change unless they perceive that it will be more painful – in terms of increased problems or lost opportunities – to continue operating in the current manner.

Change is a process, not an event. A manager cannot simply send out a memo that reads, "We will become a market-driven bank tomorrow at 3 p.m." A transition period of loosening old habits and assimilating new behavior is always necessary to avoid costly long-term resistance.

Resistance Is Natural

Successful managers understand that resistance to change will always arise, even if the change is perceived as positive. People do not resist change as such; they resist the disruption that change brings in their lives.

The disruption caused by a merger, for example, can be difficult to detect. Employees may mouth acceptance, but their behavior may reflect strong resistance.

Transition periods are times of great ambiguity, typified by low stability, severe emotional distress, and high, often undirected energy. Employees often place increased importance on issues of control and high value on past patterns of operation. As a result of all these factors, conflicts increase.

Put Energies in Harness

The key to managing this ambiguity and resistance is to encourage overt rather than covert

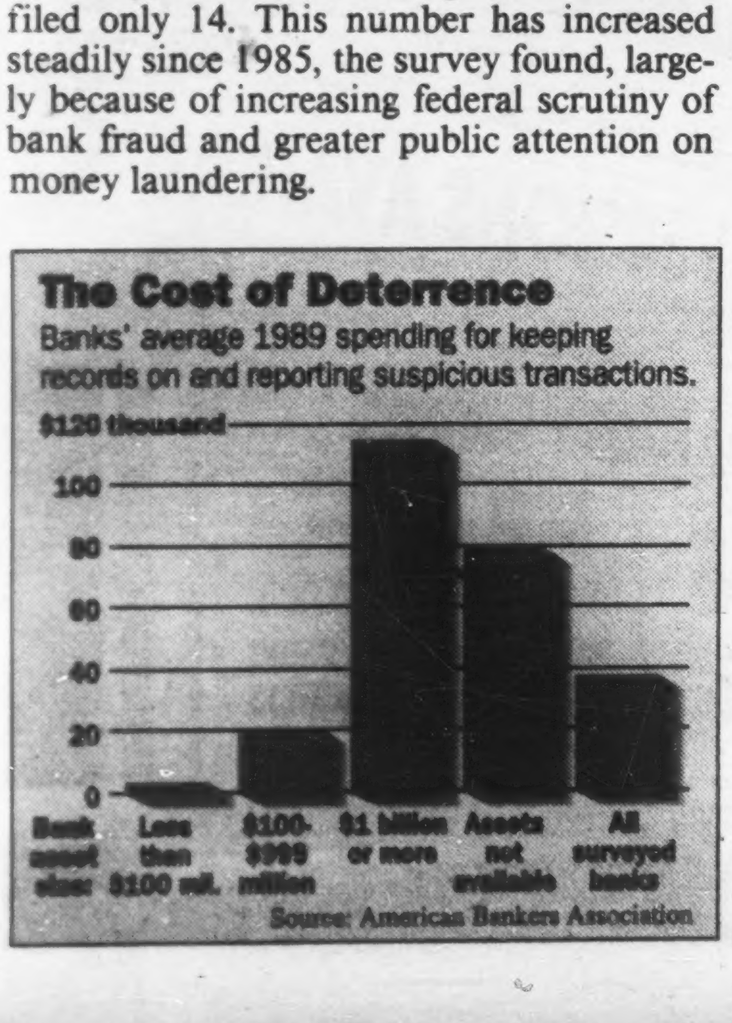
CRIME BLOTTER/*By Tom Leander*

The War on Laundering

Banks spent more than $129 million in 1989 on required record-keeping and reporting procedures for suspicious transactions, according to a survey on money-laundering deterrence by the American Bankers Association.

In a sample of 548 banks of all sizes, the ABA found average compliance costs ranging from $3,733 for small banks to $114,360 for large banks.

The average large bank filed 6,057 reports annually, while the average smaller bank filed only 14. This number has increased steadily since 1985, the survey found, largely because of increasing federal scrutiny of bank fraud and greater public attention on money laundering.



The Cost of Deterrence

Banks' average 1989 spending for keeping records on and reporting suspicious transactions.

Source: American Bankers Association

The banks were asked if they believe that currency transaction reports are an effective deterrent to crime. Only 7% of the banks were aware of any prosecutions that resulted from filing the reports or alerting authorities about suspicious transactions. One in four banks were unsure whether regulatory agencies are doing all they can do to attack the problem; one in three said the agencies are not doing enough.

Heist Suspect Dies in Cell

A Boston man who allegedly pulled off three bank robberies in less than an hour on June 4 was arrested the following day and died in his jail cell of an apparent drug overdose, according to police.

Stephen Price, 34, allegedly robbed a Pioneer Financial office in the south end of Boston at 11:07 a.m. He next allegedly robbed a BayBanks branch, several blocks away, at 11:21, then moved to a nearby suburb, Brighton, to hit New World Bank.

The robber allegedly showed a handgun at all three banks and escaped from each with an undetermined amount of cash.

Police said Mr. Price became a suspect when they stopped his car and found an illegal sawed-off shotgun in the vehicle. After he was in custody on the weapons charge, police said, they discovered he was wanted on several warrants, including one for bank robbery.

Eyewitness accounts led police to believe that Mr. Price also pulled off the triple bank heist.

The investigation into Mr. Price's death is pending. Police could not explain how Mr. Price might have obtained narcotics in the jail cell.

Mr. Price was a suspect in eight other bank robberies in the Boston area, police said.

Sentencing in Fraud Case

The former chief executive of a bankrupt clothing store franchise was sentenced last week to six months in a halfway house for bank fraud and securities fraud.

Joseph Wolfer of Cresskill, N.Y: told U.S. District Judge H. Lee Sarokin in Newark, N.J., that he perpetrated the frauds because he had big dreams for Oliver's Stores. He operated the franchise in New York, New Jersey, and Connecticut.

The judge ordered Mr. Wolfer to make restitution of $700,000 to former Oliver Stores shareholders. He also sentenced Mr. Wolfer to five years probation with 500 hours of community service each year.

Mr. Wolfer, 47, admitted falsifying company financial statements to help Oliver's obtain a $2.95 million loan from Midlantic National Bank and a $1.5 million loan from Manufacturers Hanover Trust Co. The false financial information was used to raise $7.8 million in an initial public offering, according to U.S. attorney Samuel A. Alito in Newark, N.J., who prosecuted the case.

Mr. Wolfer pleaded guilty to creating false invoices and bills of lading to make it appear that another apparel company, Maspeth Industries, had purchased $689,775 of inventory in 1985 and 1986. ☐

Privacy Law Good As Is, Survey Finds

Continued from *page* 2

sumer privacy using "the present system or setting up a nonregulatory privacy board." Another 41% favor the creation of a regulatory privacy commission to increase protection.

Several banking and credit industry trade groups want to forestall additional disclosure requirements and other major changes in privacy regulations.

A proposed overhaul of the Fair Credit Reporting Act, one of the bills to be discussed in the congressional hearings today, is "premature," said Marcia Sullivan, vice president and senior legislative counsel for the Consumer Bankers Association, which represents about 900 retail banks.

"Everyone agrees that organizations have not been clear enough in saying, 'here are your rights,' " said Ms. Sullivan. "We feel consumers should be made to know what their rights are."

The association would be willing to consider additional legislation only if problems with fair credit reporting continue once consumers are better informed of their rights, Ms. Sullivan said.

Weaknesses Cited

Representatives of the American Financial Services Association and the Associated Credit Bureaus cited inadequate enforcement as one major weakness of the existing law. The credit reporting act took effect in 1971 and has not undergone a major overhaul since then.

Under this law, only U.S. attorneys may prosecute cases of unauthorized access to personal information collected by reporting agencies.

Walter Kurth, president of Associated Credit Bureaus, wants to allow consumers and reporting agencies to file complaints. He opposes other proposed amendments to the legislation that would tighten up credit reporting requirements.

Proposed Legislation

At today's hearing, legislation proposed by subcommittee chairman Richard Lehman, D-Calif., would strengthen the existing law in a number of ways. Mr. Lehman would:

- Prevent credit bureaus from releasing information unless the consumer granted express permission.
- Shorten the statute of limitations on negative credit information that a reporting agency could use.

Banking and credit industry trade groups want to forestall additional disclosure requirements.

- Require reporting agencies to offer consumers entire files, not just summaries.
- Require a consumer to be notified of their Fair Credit Reporting Act rights each time an agency reports information about that person.
- Require reporting agencies to provide annual copies of its reports to consumers.

The subcommittee will also consider similar bills submitted by Rep. Charles Schumer, D-N.Y., and Rep. Matthew Rinaldo, R-N.J.

Although past attempts at reform have not advanced in Congress, David John, special assistant to Rep. Rinaldo, predicts the current raft of bills may go further. "The question is when," he said.

Edmund Mierzwinski of the U.S. Public Interest Research Group, a consumer group founded by Ralph Nader, said he is optimistic the legislation will go further than in the past because of growing concern about the computer revolution. Increasing numbers of people have access to credit information, which agencies repeatedly"splice and dice"' and resell to ever more users. ☐

Apple Challenges Suitor on Partners

WASHINGTON — Apple Bancorp Inc. said in letters to federal and state banking regulators that Stanley Stahl should be required to file new applications with them to include partners in his effort to acquire Apple.

In letters dated June 5 to the New York State Banking Department and the Federal Reserve Bank of New York, Apple said Mr. Stahl's original applications for approval as a potential bank owner are invalid because they did not include his relationship with Apple Bancorp shareholders Edward Brodsky, Richard Czaja, and William Mason.

The letters were released in a Securities and Exchange Commission filing.

Mr. Stahl, Mr. Brodsky, Mr. Czaja, and Mr. Mason all are on the Apple Shareholders Protective Committee and have filed as a group with the SEC. Mr. Stahl, who holds a 30.6% stake in Apple, has made a $38-a-share tender offer for the company. — **Reuters**

The Fed Gives New Powers To Major Japanese Banks

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board has approved the applications of two major Japanese banks to expand their activities in the United States.

Over the objections of Fed Governor Martha Seger, the board allowed the Bank of Tokyo , the 18th-largest bank worldwide, to do securities brokerage, trade foreign exchange, and provide investment advisory services through its wholly owned subsidiary, BOT Securities Inc., New York.

Fed Governor Martha Seger objected, saying neither bank meets capital requirements.

The board also approved the application of Nippon Credit Bank Ltd., Tokyo, the world's 32d-largest bank, to acquire Nippon Credit Trust Co. of New York and become a bank holding company.

Ms. Seger objected to both actions because she said neither Nippon Credit nor Bank of Tokyo meet capital requirements for U.S. banks. But the board issued its approval because it said the applicants met capital requirements using Japanese banking and accounting practices and taking into consideration the unrealized appreciation of their equity securities.

The board of governors also approved the application of Amsterdam-Rotterdam Bank and Stichting Amro, both of Amsterdam, to underwrite and deal in securities through their New York-based subsidiary, Amro Securities Inc.

The decision also allows the Netherlands' second-largest banking organization to perform limited dealing in mortgage-related securities, municipal revenue bonds, commercial paper and consumer-debt related securities, to privately place securities, to engage in a full range of brokerage activities, and to advise customers.

The Dutch banks were deemed to meet U.S. capital requirements. ☐

Investor Group Gets RTC Thrift in Florida

VIRGINIA BEACH, Va. — Essex Financial Partners, a group organized last year to buy thrift assets in the Southeast, said it has acquired Financial Security Savings and Loan of Delray Beach, Fla., in a deal with the Resolution Trust Corp.

The company said it will change Financial Security's name to Essex Savings Bank and inject enough capital to bring the thrift into compliance with regulatory guidelines. It said it will assume management of $125 million in Financial Security loans, investments, and deposits and has up to 90 days to decide which loans to keep and which to return to the RTC. — **Reuters**

FDIC Appears Flexible on Insurance Issue

By YVETTE D. KANTROW

ANALYSIS: *Follow-up on the news*

L. William Seidman, chairman of the Federal Deposit Insurance Corp., surprised the industry last week when he announced that his agency is reviewing whether bank insurance powers recently granted by a Delaware law are too risky for the deposit insurance system.

The brief announcement, made at the beginning of the agency's regular monthly meeting, caused speculation that the agency might take a hard line and prohibit its member banks from underwriting insurance. Such a step would undo the major expansion of insurance powers banks won after a hard-fought battle in Delaware.

But the consensus among industry observers is that the FDIC will not prevent banks from taking advantage of the wide-ranging Delaware law. To be sure, the FDIC may very well conclude that underwriting and other insurance activities are risky for banks and warrant close scrutiny. But observers say the FDIC will most likely seek provisions to control the risk – such as the construction of firewalls – rather than attempt to outlaw underwriting altogether.

Stance Is Termed Decade Old

"I don't believe for a minute they would say that it can't be done," said William Isaac, a former FDIC chairman who is now with the Secura Group in Washington. He expects the FDIC to require all underwriting activities to be handled out of a bank subsidiary rather than out of a bank itself.

"That's been the position of the FDIC for a decade or so," he said.

Other observers expressed similar sentiments.

"I'd be shocked if Seidman said he wouldn't insure a state bank" that took advantage of the Delaware law, said Dennis J. Lehr, a partner with Hogan & Hartson in Washington. "There's a hundred ways [the law] could be conditioned and studied."

Signed May 30

Mr. Seidman asked his agency's staff last week to review the Delaware law, which grants state-chartered banks the power to underwrite and sell insurance nationwide. The law, signed by Gov. Michael L. Castle on May 30, effectively allows major banks like Citicorp and Chase

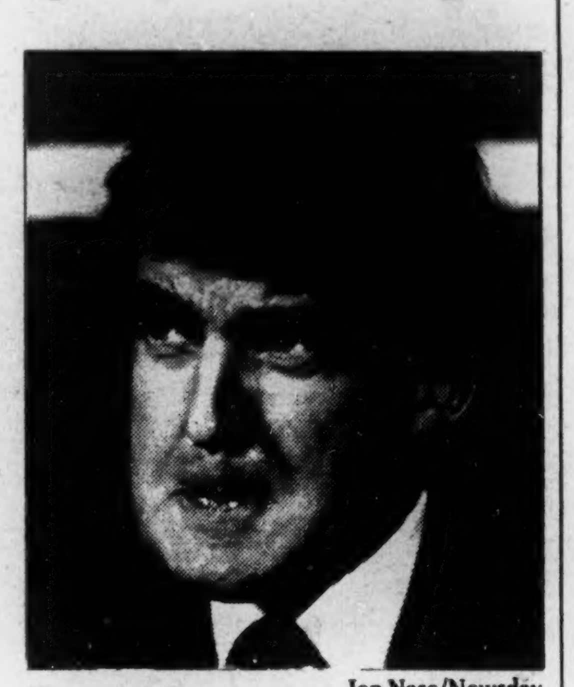
Missed Bond Payment Starts A Clock Ticking for Trump

By STEPHEN KLEEGE



Donald Trump Jon Naso/Newsday

The Trump Organization said Friday a $30 million payment to bondholders of Trump's Castle casino was not being made, pending the outcome of negotiations with its bank lenders.

The move started a clock ticking that gives the faltering empire headed by Donald J. Trump 10 to 30 days in which to make the payment, or default on the bonds. A default could force Trump's casinos into bankruptcy, further impairing his ability to repay $2 billion in bank loans.

Pressure on First Fidelity

The failure to make the payment also puts heavy pressure on First Fidelity Bank, Newark, N.J., which is trustee of the bonds.

As trustee, the First Fidelity Bancorp. unit would have the option of extending the deadline to 30 days, according to one high-yield analyst. A spokesman for First Fidelity, which also holds $75 million of Trump loans, declined to comment.

Trump's major lenders – Citicorp, Chase Manhattan Corp., Bankers Trust New York Corp., and Manufacturers Hanover Corp. – reportedly had agreed to lend the developer an additional $60 million and defer interest payments on the bank loans. But this agreement was said to be contingent on approval from the other Trump bankers.

Bankruptcy Possible

However, some of the smaller lenders are holding out. Sources said the smaller banks might want to force a bankruptcy, because that would leave them in a better position if their interest in a particular Trump property were secured.

But a bankruptcy specialist said that reasoning would be "naive thinking" by the bankers because of the interrelationships of Trump's myriad holdings. He said it was more likely that the smaller banks were stalling in hopes that they would be bought

Miami Bank To Post Loss As Bad Loans Soar by 30%

By KENNETH CLINE
and GORDON MATTHEWS

In a sign that real estate woes in the Southeast may be getting worse, Miami-based Southeast Banking Corp. said Friday that its nonperforming loans would rise by 30% in the second quarter and that it would post an unspecified loss for the quarter and the year.

The $17.1 billion-asset bank also announced it would cut it quarterly dividend by 64%, to 10 cents a share.

Deficit Estimated

Robinson-Humphrey Co., an Atlanta-based brokerage house, estimated the quarterly loss at $15 million to $20 million and projected a $25 million deficit for the year. The annual loss will be mitigated by a gain of up to $100 million on the sale of mortgage assets, the company said.

The surprise news drove down the bank's stock by $2.125, to $11.25.

After Southeast posted a first-quarter loss of $56.8 million, chairman and chief executive Charles J. Zwick said the bank

Mass. Bankers Protest Plan To Tax Services

By ELLEN MEMMELAAR

Massachusetts bankers are up in arms over a bill passed by the state Senate that would impose a 5% tax on their services.

Mortgage bankers say they would be most affected, and some are threatening to leave the state if the measure becomes law.

Others Would Be Taxed, Too

As part of wide-ranging package to raise $1.6 billion in taxes, the Senate is seeking to levy the 5% tax on most service industries – including law, engineering, surveying, research management, consulting, public relations, and money management. A few services, such as advertising and hairdressing, are exempt.

The bill has moved to a conference committee, where the Senate must reconcile it with a House tax package. The House version does not call for a tax on services.

"We think that the chances for

Deals with Bigger Equity Stakes Could Set New Pattern for Buyouts

By STEVEN LIPIN

The recently proposed acquisitions of Maybelline and part of Prime Motor Inns Inc. could signal the way deals will need to be structured in the leverage-averse 1990s, bankers and buyout specialists said.

Unlike most of the deals that characterized the go-go years of the past decade, both buyouts feature extremely big equity components – in the range of 50% of the purchase price.

With banks wary of highly leveraged transactions, experts say more buyouts will need to have such conservative financial structures in order to attract lenders.

"This is what the retooled market looks like," said Michael Madden, cohead of investment

Mac Network's Banks Help To Test New Kind of ATM

By RICHARD LAYNE

PHILADELPHIA — Nine Midlantic banks have agreed to help CoreStates Financial Corp. develop two new teller machines that will allow consumers to cash checks, buy certificates of deposit, and receive account statements.

As CoreStates said when it began testing the machines last year, the new generation of ATMs could fulfill the technology's promise by taking customers off the teller line and providing round-the-clock service.

But like any new technology that could alter retail banking service, bankers are expected to spend up to a year testing it before beginning a rollout.

Installation in 1991

CoreStates said some of the banks will begin installing the two machines next year. The Mac Check machine cashes checks, and Mac Info dispenses account information and performs transactions.

In a presentation to bankers on Thursday, CoreStates also announced that it would market a telephone banking service and a machine that will allow banks to issue ATM cards in branches. All of the services are being offered to members of the Mac ATM network.

Some observers have suggested a check-cashing ATM could help banks comply with rules to make deposited funds available sooner, but the machines are not expected to be in use until well after such regulations take effect in September.

A Tight Schedule

Banks will then be required to credit to a customer's account within two days virtually any check deposited through an ATM.

More than 90% of banks plan to continue accepting deposits through their existing ATMs after Sept. 1, according to an American Bankers Association survey. Those banks plan to adapt in other ways to make funds available sooner.

CoreStates, working with NCR, installed the two new ATMs in a branch of Philadelphia National Bank in Newtown, Pa., 14 months ago. IBM now offers a version of both machines.

Costs Would Be Cut

In an interview last year, Bipin C. Shah, now CoreStates vice chairman, said the new ATMs could knock $150,000 a year off the cost of running a branch.

> **"The steak is the Mac Check. The sizzle is Mac Info."**
>
> **Bonnie Hill**
> *Philadelphia National*

Richard W. Epps, senior vice president at the banking company, estimated that 75% of a teller's activities involve cashing checks. By installing check-cashing ATMs, a bank can reduce or reassign tellers.

At the Newtown branch, the ATMs have been available 24 hours a day, seven days a week. Mr. Epps said that 50% of the transactions other than cash dispensing were done outside of work hours, mostly on the weekend. Mac Check handled an estimated 70% of the electronic transactions, he said. "The steak is the Mac Check," said Bonnie Hill, a Philadelphia National executive. "The sizzle is Mac Info." ☐

Banks Using Less First-Class Mail

ABA Study to Be Cited in Case Against Rate Increase

By JEANNE IIDA

NEW YORK — Responding to spiraling postal costs, banks are sending 4% fewer first-class letters than they did three years ago, according to a study just completed by the American Bankers Association.

The study shows that bankers, the single biggest group of first-class mailers, are choosing less-expensive postal services when they can. It also indicates that a proposed 20% increase in first-class rates could be counterproductive for the U.S. Postal Service – by spurring declines in usage, at least among bankers.

The ABA plans to use the findings in testimony on July 17 before the Postal Rate Commission as ammunition in its fight against the rate increase.

Previous ABA studies showed steady increases in the use of first-class mail by bankers. The shift in mailing habits, bankers say, is a response to actual and anticipated increases in postal rates, declines in postal service, and technology advances that allow them to send memos, documents, and intracompany letters by facsimile machine or electronic mail.

"Banks are really looking for alternatives to first-class mail," said Carlyle Jensen, vice president and manager of centralized services for U.S. National Bank of Oregon, Portland.

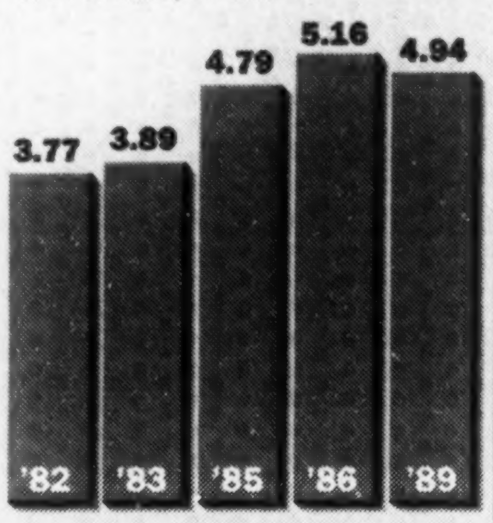
Required Uses

Banks are required, however, to use first-class mail for certain types of mailings, such as bank statements. The Oregon bank's postal costs will increase by about $2 million if the proposed rate increase goes into effect, Mr. Jensen said.

The ABA study, tabulating mail volume and expenses for 651 U.S.-based banks in 1989, shows that bankers sent less first-class mail but paid more for it than in 1986, when the group last conducted a survey.

A Dip in Mail Volume

Pieces of first-class mail sent by U.S. banks, in billions



Data not available for '84, '87, '88

Source: American Bankers Association

While the volume of first-class mail sent by banks declined 4.3% – to 4.940 billion pieces in 1989 from 5.162 billion pieces in 1986 – the cost to banks of sending first-class mail increased to $1.526 billion from $1.467 billion. The cost increase can be attributed to a 3-cent increase in first-class rates in April 1988.

"Those numbers suggest bankers are in a competitive environment where costs matter, and they're going to do everything possible to lower those costs," said Perry D. Quick, a principal of Quick, Finan & Associates, a Washington-based economic consulting firm. Mr. Quick will represent the ABA before the Postal Rate Commission.

Major Shifts Seen

Bankers increased the amount of mail sent by third-class bulk rate by about 160% over the three-year period, to 162.4 million pieces from 61.6 million pieces.

The study showed a 300% increase in the use of priority mail, to 21.7 million pieces in 1989 from 5.4 million pieces in 1986.

A spokesman for the ABA said the study bears out the trade association's warning to the Postal Service in a 1986 rate case, when the rates climbed 25%. The ABA said the postal plan would backfire, because companies would change the way they did their mailings.

But at least one banker said it is not fair to blame the Postal Service for all of the decline in first-class mailings. "Our customers are demanding faster resolution of questions, and so we've gone to new technology," such as telephone response centers and fax, the banker said. "This is not a shift that we calculated coldly," he added.

Presorting Advocated

Postmaster General Anthony Frank, a former banker, has encouraged banks and other companies to invest in bar-coding and presorting equipment. "If you're paying 25 cents right now, shame on you," Mr. Frank told bankers at a recent ABA conference.

If mailers presort their mail and put bar codes on it, they could pay as little as 24.3 cents a letter, according to the Postal Service.

"For a bank our size, [installing presorting equipment] is cost-prohibitive," said L.R. Connelly, executive vice president and chief operating officer of Plaza Bank of Commerce, San Jose, Calif.

Presorting and bar-coding equipment costs $40,000 to $500,000, Mr. Quick said.

About 54% of all banks presort some or all of their mail, according to the study. A full 100% of banks with assets of $10 billion or more presorted their mail in 1989, while only 22% of banks with assets of less than $25 million did. ☐

COMMENT/

By Paul S. Nadler

Investment Officers Ascend, But at a Perilous Moment

We all used to pity the investment officer. He was the guy who got the money when loan demand was weak, interest rates were low, and bond prices were high and was told to put it to work.

Then, when loan demand picked up, interest rates rose, and bond prices fell, the CEO would say, "Sell the bonds so we can lend out the money."

Naturally, bond prices having fallen, the next words the poor investment officer would hear from the CEO would be: "Schmidlapp! Why do you always lose money in the bond market?"

The Downside of 'Idiocy'

Investment officers seldom got to the top of the bank because you couldn't convince the board that this "idiot" who buys high and sells low should be promoted.

Today, however, investment officers' status should have improved.

After all, it is the loans that are causing today's losses. And with regulators having become so tough in evaluating loans and forcing banks to write off those that would have been accepted as solid before the thrift crisis, eyes are turning to good old Schmidlapp, the investment officer.

And CEOs are wondering whether he or she might not be the salvation of the bank – in other words, whether the investment arena might not be the place where the bank can find the yields it needs to cover the cost of deposits and possibly even make a profit, too!

More Complicated Investing

But those who are now turning to the investment department as their bank's salvation may find the switch tougher than they expected.

Brian Glenn – vice president of UBS Securities in New York, a certified public accountant, lawyer, and a former Internal Revenue Service agent and bank tax counsel – basically is saying: "It's tough making a decision in investments today because, now, regulatory and accounting rules are driving the transaction."

What are this expert's reasons?

First, all tax advantages for investments are gone. Banks used to be able to deduct the cost of time and savings deposit interest yet place the money in tax-exempt bonds – making a profit on the after-tax spread. No more.

Capital gains and normal income tax rates are roughly the same, so the benefits of tax planning have largely disappeared from investment decision-making. That leaves accounting and regulatory rulemaking as the keys to investment opportunities.

And bankers soon must deal with a final set of accounting guidelines on investing versus trading, Mr. Glenn said, which will further complicate investment decision-making.

Under the guidelines, a bank must designate trading and investment portfolios. If an asset is available for sale, it must be marked to market regularly. If the bank wants to keep an investment on the books at cost, it can only sell the item under severe restrictions.

Which is the better approach? Who knows?

Restriction on CMOs

On top of this, Mr. Glenn reports that the Office of the Comptroller of the Currency will soon restrict certain collateralized mortgage obligations by declaring that those that are too volatile will not be accepted as suitable bank investments.

What is this test of volatility? If a rise or fall of 300 basis points in interest rates would lead to a change of more than seven years in the average life of these CMOs – due to a change in early repayment patterns – then the investment would be considered unsuitable for a bank.

What are Mr. Glenn's conclusions?

Tax-exempt securities will play virtually no role in most banks' portfolios in the years ahead, but CMOs will continue to be useful.

Lure of Shorter Maturities

Even with the new volatility rule, most CMOs will meet regulatory standards for bank investment. This is especially true with regard to shorter-maturity CMOs, and Mr. Glenn reports that many banks are now shortening the average life of all securities.

This is both to meet the volatility test and to minimize reported gains or losses if a bank decides to keep investments in the trading portfolio and thus must mark them to market.

So while the investment officer finally has a chance to be the bank's hero, achieving this status will not be a piece of cake. Rather, it will require understanding the implications of regulatory changes and accounting complexities that investment officers never had to face before.

So Schmidlapp has his, or her, work cut out in order to build an image and be considered a potential bank CEO. But it remains easier for this to happen than it was in the old days of being forced to buy high and sell low while lending officers' needs got high priority. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

A recent study by Grant Thornton, a Chicago-based accounting and consulting firm, examined the performance of 97 thrifts and the salaries paid to their top executives. Of the executives who run the 20 largest institutions, the study showed, nine received pay raises although the performance of their institutions declined. *American Banker* reporter Bill Atkinson asked:

Q ***In light of the shakeout in the savings and loan industry, should executives decline to take increases in salary?***

J. Lee McCullough
Partner/Consultant
The Hay Group Inc.

Merit increases or short-term incentives should be tied to the performances of both the institution and the individual. Compensation should be more a question of how I – or the company – have performed rather than how the industry is doing.

Nonetheless, in light of the poor performance of many thrifts, I think the compensation levels of some senior executives are questionable. And I don't think the shareholders are really as sensitive to executive compensation as they should be.

Pay isn't always linked to performance. If I were a shareholder, I would be worried about that.

But if you are a shareholder in a thrift, and you object to outrageous compensation, there is an obvious question: Where were you when the proxy came out and you approved the compensation plan?

Michael J. Leding Jr.
President
Michael J. Leding
Jr. & Associates
Tampa, Fla.

If a thrift is a viable business, and it is run accordingly, then a raise makes sense. On the other hand, if the savings and loan is in trouble, that should mean no salary increases.

Compensation in the savings and loan industry started to change when Wall Street started to pay more attention to earnings per share. Until then, part of a thrift executive's compensation was considered to be the prestige he gained in the community.

Now, officials read proxy statements, and they say: "So and so is making this, so I should be making that."

Frederick L. Webber
President/CEO
U.S. League
Of Savings Institutions

The question ignores the fact that the majority of thrifts are healthy and profitable. Executives of healthy and prudently operated institutions – burdened as they are by the costs imposed on them by the Financial Institutions Reform, Recovery, and Enforcement Act – have earned their salaries.

As for troubled institutions, the question is moot. The regulators control those salary levels.

William F. Sinclair
Chairman/CEO
Washington Federal Savings Bank
Washington, D.C.

If an institution is profitable and has a strong net worth, executives should be given a raise. Likewise, as an executive if you've performed well, you should take a raise. If you don't reward people who are performing well, capable people are going to find work elsewhere.

By contrast, if the company is in trouble, an executive has to bite the bullet, knowing that until they get out of the jam, there aren't going to be any raises.

At Washington Federal, we are making money, yet our executive committee voluntarily cut their fees in half. That adds up to a lot of money.

Frank P. Felton
Chairman/CEO
First American Savings
Jenkintown, Pa.

If a savings and loan is profitable and it meets all of its fully phased-in capital requirements, its executives should be paid for performance and should not be penalized because some institutions have been poorly handled.

If thrifts were not able to pay salaries comparable to those at other financial institutions, it would be impossible for them to attract qualified, well-trained personnel.

Besides, the salaries paid to executives by savings and loans have to be reported to the Office of Thrift Supervision. If in the opinion of the OTS, any officer is being paid too much, the agency will advise the institution involved. ☐

Why Banks Make So Many Bad Loans

By SANFORD ROSE

Let us state a simple but often overlooked proposition: The health of a country's banking industry is inversely related to the speed and efficiency of information transfer.

That is, the more information that is available to market participants, the weaker are the banks. The less available information, the stronger are the banks.

Few should question the notion that banks thrive when information is not widely disseminated – i.e., markets are reasonably imperfect. In a world of perfect knowledge of existing market conditions, there would be no need for financial intermediaries. Buyers and sellers of credit would interact directly, without recourse to middlemen.

Comment

The prosperity of banks depends on a monopoly or quasi-monopoly of customer-specific information. As the technology of information transfer improves, it erodes this monopoly and with it the raison d'etre of financial intermediaries.

Banks Love a Mystery

Otherwise put, banks love a mystery. They batten on credit opacity; they abhor credit transparency. When credit risk is opaque, banks can sell highly valued analytic services. When risks are transparent, banks are reduced to being purveyors of money, a low-valued and widely available commodity.

In this country, we are passing through an age characterized by the predominance of "borrowers and lenders" and entering an age characterized by the predominance of "issuers and investors." In the earlier period, ultimate investors, lacking the requisite information about creditworthiness of borrowers, lent their funds first to banks and thrifts, which, possessed of the needed data, relent to borrowers. In the emerging period, this roundabout and costly technique of funds transfer is rapidly being short-circuited, replaced by the more efficient security-issuance process.

It is unquestionable that increased competition from progressively better informed public markets has greatly diminished the franchise value of banks and thrifts. And as the value of bank and thrift charters has declined, the incentive to indulge in less-than-prudent lending behavior has corresponding-

Cirrus, Plus Seen Gaining In ATM Wars

By RICHARD LAYNE

NEW YORK — For the first time since they were formed in the early 1980s, national automated teller machine networks are poised to take away market share from the regional networks that currently dominate the business, according to Speer & Associates, an Atlanta consulting company.

In its annual survey of ATM networks, Speer forecast that the national networks' share of interchange transactions – in which a customer of one bank conducts a transaction at the ATM of another bank – will rise to 10% in 1993 from 4% this year.

The data indicate that the national networks are proving cost-effective alternatives to regional processors. The most prominent national networks are Cirrus System Inc., a MasterCard International subsidiary, and Plus System Inc., which is part-owned by Visa U.S.A.

Until now, Cirrus and Plus ATMs have been used relatively rarely by travelers wanting to obtain cash from their bank accounts back home. But a 10% market share in 1993 will add up to a sizable 232 million transac-

U.S. Postmaster Hints At Check-Cashing Role

By ROBERT M. GARSSON

WASHINGTON — In a move that might spare banks from being forced to cash government checks, Postmaster General Anthony M. Frank said on Monday that he is studying whether his agency's 40,000 branches could be used for that purpose.

The proposal, disclosed in an interview, comes at a time when the banking industry is gearing up to fight legislation that would require all banks to cash U.S. government checks. The measure, sponsored by Sen. Howard Metzenbaum, D-Ohio, would also require banks to cash state and municipal government checks within the state of issue.

The proposal by Mr. Frank, a former thrift executive, could help the banking industry fight the legislation.

Duty to Taxpayers

In discussing the idea, Mr. Frank said, "We are owned by the American people. If we can serve, by cashing government checks, people who would otherwise not be served, we should take a look at it."

However, he said, if Congress requires banks to cash government checks, there would be little need for his agency to offer the service.

"The only exceptions would be in rural areas, where there aren't many banks, and in the inner cities," he said.

Each month, the federal government makes about 83 million payments, primarily by check. Social Security and Medicare, the two largest categories, are responsible for $70 million of the payments.

Mr. Frank, former chief executive officer of First Nationwide

Loans for Real Estate Grew Twice As Fast as Business Loans in 1989

By STEPHEN KLEEGE

Usually, a top-10 ranking is a source of pride for bankers. But this year, when it comes to real estate lending, a top ranking seems about as welcome as a visit from bank examiners.

Asked about the *American Banker*'s annual survey of the top 100 banks in commercial real estate loans, top-ranked Citicorp quarreled over data showing rapid loan growth, second-ranked Wells Fargo found itself on the defensive despite a good track record, and third-ranked Chase Manhattan Bank declined to comment at all.

(The rankings are in tables that begin on page 19. Tables listing the top business lenders begin on page 8.)

The sensitivity reflects growing concern about the dangers of lending in overbuilt markets. It

Great Western To Buy Carteret Units in Florida

By TERESA CARSON

LOS ANGELES — Seeking a major expansion in Florida, Great Western Bank announced onMonday that it has agreed to acquire 13 Carteret Savings Bank branches in the state with $700 million in deposits. The Beverly Hills-based thrift also disclosed that it wants to make another big Florida purchase and remains interested in the the failed CenTrust Bank.

The Carteret acquisition will boost Great Western's Florida deposit base 40% to $2.4 billion and increase its branch network there to more than 60. Eleven of the branches are in affluent Palm Beach County, where Great Western already has 20 branches.

From Eighth Place to Sixth

The acquisition will make Great Western the sixth-largest thrift in Florida based on year-end deposits, up from its No. 8 ranking. The thrift also operates

ATM Wars: National Nets Gaining

Survey Shows Regionals Poised to Lose Market Share

Continued from *page* **1**

tions, four times the nationals' 1990 volume, Speer projected.

The national networks' gains will come mainly at the expense of the smallest, regional networks handling between 6 million and 24 million interchange transactions a year.

Superregionals Slipping

Meanwhile, the market share of the major superregional networks will drop by two percentage points to 82% in 1993, Speer said. That slip does not represent a major setback, considering that total interchange volume is growing 60% to 70% a year, according to Richard N. Speer Jr., chairman of the consulting firm.

The company sees the superregionals – led by CoreStates Financial Corp.'s Mac system and the New York Cash Exchange network – increasing their transaction total 50% to 1.9 billion in 1993 from 1.27 billion this year.

The interchange transactions will rise to 2.3 billion in 1993 from the current 1.5 billion annual rate, Speer said.

Mac Still Dominates

Even with their projected gains, the combined volumes of Cirrus, Plus, and a few smaller nationwide interchanges may not exceed the projected volume of the Mac network, which is the perennial leader in interchange transactions.

At 17.7 million interchange transactions a month, Mac is twice as active as the Nyce network and almost three times as big as Star System, a California-based network that is No. 3 on the Speer list. Nyce is the biggest network in total transactions – which are not reflected in Speer's measures – and in teller machines, with 8,819. Star has about 7,700 machines, Mac 6,919.

The gains in market share by the national networks are impressive. "You start to believe that Plus and Cirrus can become viable," said Ron Dennis, a senior vice president with Speer. "Before, their volumes were so low, they weren't doing as much volume as the successful regional networks."

Consolidation Credited

Plus and Cirrus owe their growth to several factors, including consolidation among small regional ATM networks. National networks, which have doubled their market share from 2% in 1987, are gaining as the regionals merge or find that bigger switches can process transactions cheaper than they can.

Mr. Dennis of Speer said that not long ago there were more than 200 networks. Now that number is down to over 100, with only 90 registering any significant volume.

In one example of consolidation, the Honor, Avail, and Relay systems merging in the Southeast gives the national networks an opportunity to process interchange transactions.

"With consolidation, like in the Southeast, the nationals may play a greater role in those markets," said Ron Reed, vice president of Plus System Inc., Denver. One option that Honor, Relay, and Avail are considering is adopting a national identity such as Plus to create a common image.

Also, some regions of the country, including Vermont and parts of Tennessee and Virginia, are not served by large, shared ATM networks, according to Mr. Speer. In these markets, banks may elect to offer a Plus or Cirrus service, increasing the number of ATMs available to cardholders and perhaps cutting down processing costs. ☐

National ATM Networks Make Their Mark

Systems such as Cirrus and Plus are expected to double their market share by 1993

Visa to Provide Services to Member Banks of Internet

By YVETTE D. KANTROW

NEW YORK – Hoping to gain a foothold in the emerging debit card market, Visa U.S.A. has reached an agreement to provide credit, debit, and other processing services to the members of a major automated teller machine network.

The deal allows Internet Inc. – operator of the Most ATM network in Virginia and nearby states – to hawk Visa's payment processing services to its 420 participating banks. The nonexclusive agreement represents potentially millions of new transactions for Visa's authorization and processing businesses.

Executives at the San Mateo, Calif.-based card association say the deal is significant because it diversifies Visa outside of its traditional strength in credit cards.

Forging Relationships

Visa already has close ties to bank credit card executives. But as debit card systems proliferate, Visa is looking to forge similar relationships with the debit card departments of banks.

"Debit card decisions will be made by the same people who make ATM decisions, and it's important that we have a dialogue with that side of the bank," said Roger Peirce, a Visa executive vice president.

The Most network, which serves the Middle Atlantic and Mid-South regions, also has a service contract with Deluxe Data Systems Inc., Brown Deer, Wis. Most's banks will have the option of relying on either Deluxe or Visa for their ATM network processing needs.

"In the long term, there is a potentially competitive dimension to [the agreement]," said David O'Connor, president and chief executive officer of Internet, Reston, Va. "Especially if we can find more efficiencies and applications with Visa than with Deluxe Data."

Incentives Provided

Visa will provide Internet with financial incentives to promote its services to its member banks, Mr. Peirce said.

A Deluxe spokesman said the company has been providing terminal-driving and transaction authorization services for Internet since 1983. Internet signed a new five-year contract with Deluxe about two months ago, the spokesman said.

Mr. O'Connor said the Visa arrangement gives Most members an opportunity to take advantage of Visa's huge payments processing infrastructure. "The regional networks might see this as giving up control to Visa and allowing Visa to gain a foothold," he said. "We don't see that at all."

While some regional network executives have been wary of Visa as a potential competitor, they say the Internet deal represents a new way of thinking for the card association.

"They've said, 'We've got to find a way to be partners with the regionals,' " said Richard P. Yanak, president of the Yankee24 network in Wallingford, Conn. "I'm positive about [the agreement], and it can help Most better service their marketplace."

According to Mr. O'Connor, banks in the future will rely heavily on the regional networks to help them develop new EFT applications for both merchants and consumers. For example, Visa's wide range of services can help Most develop cash management services for merchants, he said. ☐

ANOTHER

" The highest compliment I can pay Shared Financial Systems is to say that their EFT/POS software produces results."

COMMENT/ By Peter K. Keogh

Well-Meant Regulations May Thwart RTC Mission

All parties watching the Resolution Trust Corp.'s performance acknowledge the challenge of disposing of the largest portfolio of commercial real estate yet assembled in this country. Fewer see that the tight regulatory jacket tailored for the RTC, though nobly intentioned, could well throttle its attempts to meet this challenge.

From birth, the RTC has been torn between mandates.

Its Washington-based creators, sensitive to charges that their regulatory laxity brought on the savings and loan crisis in the first place, have taken pains to insure that the agency operate above ethical suspicion. But equally anxious that thrift takeover costs be minimized, they have also pressed for a rapid return of seized real estate assets to the private sector.

Rigid Auction Regulation

The RTC has accommodated both mandates by choosing to use a rigidly regulated auction process to dispose of real estate. The agency's safeguards have put particular – and undue – focus on appraisals, to which much of the disastrous smoke-and-mirrors commercial real estate gimmickry of the last decade has been traced.

But delay is the RTC's enemy, not uncontrolled appraisals. By its latest estimates, the agency must dispose of $100 billion in real estate assets held by failing S&Ls in addition to the $100 billion in such assets it now holds.

Disposing of that much real estate under any conditions would be a monumental task. Under appraisal guidelines the RTC has proposed, the task may never be completed.

Under the proposed rules promulgated in order to satisfy Title XI of the Financial Institutions Reform, Recovery, and Enforcement Act, appraisals must include three years of sales history, a market-trends analysis, and a determination of market value.

> **"The fact is, however, that the standard criteria used to establish appraised 'market value' of commercial properties . . . simply don't apply in the distressed RTC markets."**

Proposed Appraisal Rules

The rules also require use of certified appraisers by Aug. 9, 1990, on federal transactions and by July 9, 1991, on state-level deals. Conflict of interest guidelines are spelled out for both in-house and fee appraisers.

The Federal Deposit Insurance Corp., aware of the general challenge facing the RTC, has acknowledged that the agency is being asked, in the proposed licensing process alone, to do in two years what professional organizations have taken decades to accomplish.

The RTC's appraisal burden is, again, the price for balancing agendas.

The agency's own policies call for "maximizing net present value" of seized real estate, which means disposing of parcels before carrying costs or physical deterioration further erode their worth. But it has also had to assure regional commercial interests that auctions will not disrupt already weak markets.

The RTC's masters apparently believe fair appraisals are the key to protecting the value of everyone's real-property interests.

The fact is, however, that the standard criteria used to establish appraised "market value" of commercial properties – current sale prices, income-generating potential, and replacement costs – simply don't apply in the distressed RTC markets. There are few current sales, little immediate income potential, and no replacement equivalents because no one is building.

Many projects under RTC control, conceived and built in speculative frenzy, simply have no economic reason to exist.

The entire approach, moreover, implies there *are* intrinsic market values and that they can be "found" and protected.

Self-Interest Is Market Key

If so, why is the market – here in the form of auction bidders – not seen as capable of determining such values? The standard definition of "market value" used by the RTC, Fannie Mae, Freddie Mac, and professional appraisal organizations assumes parties in a transaction are acting in their own self-interest.

Surely, calculating the impact of a depressed market on a property's value, and bidding accordingly, is acting in self-interest.

The RTC's own strategic plan acknowledges that holding properties off the market may cause more disruption rather than less because of the uncertainty these "overhangs" pose in specific markets.

Arizona, where the RTC controls $10 billion in real estate assets (80% of it raw land), seems to provide a case in point. On a recent trip to Phoenix, I found raw land sales nonexistent. While acknowledging that Arizona real estate is troubled by many depressed fundamentals, I was also struck by a market-wide paralysis

While the RTC waits, problems mount.

Quick disposal is the mandate that must prevail, and the way to make it work is the most open auction process possible

Some bankers may fear that allowing preinsolvency development interests into the RTC auction process without regulation is tantamount to admitting the Trojan horse. They need not. The proposed rules have value as preventive measures against the recurrence of abuses and should be retained as such.

To its credit, the RTC has taken a number of recent steps to ease its auction process. Rules regarding down payment, seller financing, and the onerous 95%-of-appraised-value auction price floor have all been loosened.

Cut Auction-Appraisal Linkage

What the agency should do now, during the comment period on the proposed appraisal rules, is to unshackle the seized-asset auction process from appraisal reform.

It should be very clear to every kind of financial institution that its interest lies in seeing the RTC recover its savings and loan takeover costs as quickly as possible.

The alternative is the current scenario – an RTC burdened by the carrying and maintenance costs of a growing and stagnant portfolio, solvent institutions threatened with levies to support the bailout effort, increasing government resistance to further financial assistance, and eroding public trust. □

CRIME BLOTTER/ By Tom Leander

Bank Bombers Strike Again

A rash of Monday morning bombings has extended to a third bank in Southern California, a Security Pacific National Bank branch in the resort community of Indio.

Last week's explosion sent a fallout of thousands of dollars raining down on the bank's parking lot, but police said robbery did not appear to be the motive in any of the bombings. All three bombs were detonated with timing devices.

The Security Pacific blast, which occurred before the bank's 19 employees arrived for work, touched off a substantial fire. Police said they were seeking two suspects seen leaving the branch but could offer no motive for the bombings.

Security Pacific issued a statement reassuring customers that the vault and safe-deposit boxes at the Indio branch are intact and that all deposits are safe.

The first Monday morning bombing, about five weeks ago, hit a Bank of America branch at nearby Palm Springs. The second struck a Provident Savings and Loan branch at Rancho Mirage, near Palm Springs. Some money was blown out of aBankAmerica Corp. branch in Palm Springs, but the Provident branch survived with all its money intact.

The California Bankers Association is offering $50,000 for information leading to the arrest of the Monday bombers.

Conviction in Fraud Case

A federal jury in Los Angeles convicted David A. Feldman, former owner of a mortgage-finance company, of mail fraud in a complex swindle that cost the Bank of America $95 million.

Prosecutors said Mr. Feldman, 50, approached banks across the country through his now-defunct National Mortgage Equity Corp. He talked these banks into investing in certificates that were supposedly backed by pools of high-interest residential mortgages in Southern California and Texas.

The senior officers believed Mr. Feldman when he told them that the certificates were protected by several layers of guarantees – including assurances from independent underwriters that the borrowers could pay their debts. According to prosecutors, there were no independent underwriters. All the brokers and borrowers were in cahoots.

Contrary to what Mr. Feldman told the investors, the mortgage borrowers did not make their loan payments – the loans in the pool were in default. Mr. Feldman diverted millions of dollars of investor funds to a bonding company.

The losses of the defrauded institutions were covered by the Bank of America, which acted as escrow and trustee for all but three of the mortgage pools.

Bank of America has a civil racketeering suit pending against Mr. Feldman, seeking restitution of the $95 million. Mr. Feldman faces a possible 15-year prison term when he is sentencing Aug. 20 in U.S. District Court.

Indictment in Vernon Probe

An additional indictment was handed up last week in the continuing investigation of fraud at Vernon Savings and Loan, the Texas thrift that already provided the setting for numerous S&L fraud convictions.

A federal grand jury in Texas indicted Laurence B. Vineyard Jr., president of Key Savings and Loan Association, Dallas, on one count of defrauding Vernon of $2.6 million in 1986.

Officials of the Justice Department's Dallas Fraud Task Force allege that Mr. Vineyard drew a $2.6 million advance on a $12.7 million loan agreement with Vernon, supposedly to pay certain obligations for the benefit of Vernon.

Justice officials claim that Mr. Vineyard used the money to buy a $1.4 million house and other items for his personal use. □

Data Source: Data are from the federal regulatory "Report of Condition" filed by all federally-insured commercial banks. American Banker's statistical staff extracted these data from **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex. The 1988 data are not adjusted for mergers in 1989. **Business Loans** are total commercial and industrial loans, and are taken from schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A— Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12. **Compiled by American Banker, Copyright 1990.**

Top Tier of Business Lenders Underwent Reshuffling in '89

By WILLIAM GOODWIN

NEW YORK — Major New York banks continued to dominate the top tier of business lenders last year, but major shifts occurred in the rankings, according to an *American Banker* survey.

The banking subsidiaries of Bankers Trust New York Corp. and J.P. Morgan & Co. reported big declines in their outstanding commercial and industrial loans at yearend 1989. Bank of New York Co., meanwhile, after its merger with Irving Trust Co., catapulted into the top five lenders.

(The tables of top business lenders begin on page 8. Tables listing the top real estate lenders begin on page 19.)

First Increase Since 1984

The sum of business loans held by the 10 biggest lenders grew by 6.4%, the first increase since the annual survey was begun in 1984. This growth reflects a rise in demand for working capital loans and the Bank of New York merger, observers said.

Business loans held by all domestic banks increased by 3.1%, to $618.7 billion, the fastest rate of growth since 1986. But growth slowed at the U.S. branches of foreign banks. Their increase – a robust 10.7% – was down from 14.9% in 1988.

The 6.4% increase in business loans by the 10 biggest lenders, to $165.5 billion, was partly skewed by the merger that left Bank of New York with $17.5 billion in such loans. Even excluding the merger's effects, however, the top 10 banks had loan growth of about 2.4%.

Business loans held by all domestic banks increased by 3.1%, to $618.7 billion, the fastest rate of growth since 1986.

Slowing Economy Felt

The increase partly reflects the fact that the economy was slowing in 1989, said Richard Bove, a banking industry analyst at Dean Witter Reynolds Inc. Demand for working capital loans typically rises when the economy slows and corporate revenues fall, he said.

Banks were also in a better position to make loans last year, according to Mr. Bove. "For the first time since 1982, banks reached the point where the Fed believed they were no longer undercapitalized," he said.

The collapse of the junk bond market eliminated a major source of competition for banks, Mr. Bove said. At the same time, the market's devaluation of the yen contributed last year to a reduction in the price advantage Japanese banks hold over their U.S. counterparts, he said.

A pullback by European banks was probably the main reason for the declining rate of growth in business loans held by foreign bank branches, Mr. Bove said. These loans totaled $138.2 billion at yearend 1989.

Bank of New York's Mark

The survey is based on data culled from federal call reports and includes commercial and industrial loans made both in the United States and abroad.

Among individual lenders, the most dramatic growth in such loans was the 111% increase at Bank of New York, to $16.2 billion, from $7.7 billion.

New York banks held four of the five top spots among business lenders in 1989 and five of the top 10 spots.

Citibank, the Citicorp subsidiary, was at the top of the list, with $33.3 billion in business loans. After Citibank came the banking units of BankAmerica Corp., Chase Manhattan Corp., Manufacturers Hanover Corp., and Bank of New York Co.

Two Fall from Top 10

With the exception of Bank of New York, which supplanted Chemical Banking Corp.'s lead subsidiary in fifth place, the top five rankings were unchanged from 1988.

But major shifts occurred among the top 10. Bankers Trust and Morgan fell out of the group.

In the case of Bankers Trust, which ranked seventh in 1988, outstanding business loans plunged 22.5% in 1989, to $8.5 billion. A Bankers Trust spokesman said the decline in reported commercial and industrial loans reflected the bank's "development of a strong loan distribution capability" in recent years, rather than a decline in loan originations.

"For the first time since 1982, banks reached the point where the Fed believed they were no longer undercapitalized."

Richard Bove
Dean Witter Reynolds Inc.

"It's a trend that began four years ago," when the bank developed its capability to sell loans that it originated, the spokesman said.

Commercial Paper Blamed

Morgan Guaranty Trust Co. of New York, meanwhile, pointed the finger at the commercial paper market, saying its customers are using that market as a cheaper source of funds.

"The decline in C&I loans in 1989 is consistent with a long-term trend among our custom-

SERVICE
IS NOT
A THING
OF THE PAST

You can still find it at Balboa Life and Casualty.

In fact, we don't just talk about providing service.

We impose the strictest of performance standards in such key areas as customer contact, information processing and response to service requests.

For instance, every one of the 800,000 documents we receive monthly from our customers is processed within 48 hours, with over 99.8% accuracy. Our service representatives, who receive over 120,000 phone calls each month, are continually trained and monitored.

So you and your customers can count on fast, courteous service as well as virtually flawless precision.

At Balboa Life and Casualty, we approach business with the values of the past. We find the future looks better that way.

For more information, call David de Gorter, Marketing Director at 714-553-7692.

Data Source: Data are from the federal regulatory "Report of Condition" filed by all federally-insured commercial banks. American Banker's statistical staff extracted these data from **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex. The 1988 data are not adjusted for mergers in 1989. **Business Loans** are total commercial and industrial loans, and are taken from schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A— Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12. **Compiled by American Banker, Copyright 1990.**

Top 300 Banks in Business Lending

Based on Federal Regulatory Report of Condition data for Dec. 31, 1989, compared with Dec. 31, 1988 (dollar amounts in thousands)

Rank		Total Business Loans			Bad Bus. Loans	Bad Bus. Loans/	Total Loans			Total Assets

Data Source: Data are from the federal regulatory "Report of Condition" filed by all federally-insured commercial banks. American Banker's statistical staff extracted these data from **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex. The 1988 data are not adjusted for mergers in 1989. **Business Loans** are total commercial and industrial loans, and are taken from schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A— Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12. **Compiled by American Banker, Copyright 1990.**

Data Source: Data are from the federal regulatory report of condition for all federally insured, domestically chartered U.S. commnercial banks as reported by the **Federal Deposit Insurance Corp.,** Washington, D.C. **(1)**— Includes 1-4 family residental first and second mortgages, home equity loans, credit card loans, and all other loans to the individuals (such as instalment loans and student loans). **(2)**— Commercial and industrial loans booked by domestic and foreign offices. **(3)**— Includes the following loans booked by the domestic offices of banks: (1) construction & land development loans; (2) multifamily residental mortgages; and (3) nonfarm, nonresidential loans. **(4)**— Derived by subtracting from total loans consumer loans, business loans, and domestic commercial real estate loans. **(5)**— total loans and lease financing receivables net of unearned income but including the allowance for loan and lease losses and the allocated transfer risk reserve.

Realty Loans Grew Twice as Fast as Business Loans in 1989

Continued from *page* **1**

also comes at a time when commercial real estate loans are growing rapidly. Last year, realty loans grew by 10.6%, much faster than the 4.4% growth of commercial and industrial loans.

The percentage of total loans devoted to real estate has increased steadily over the past five years, from 12.1% in 1984 to 18% at the end of last year, according to the survey.

Real estate recessions that rolled through the Southwest and New England have spurred crackdowns by worried regulators.

Recent Downgrading

Rating agencies are also sensitive to potential real estate problems. San Francisco-based Wells Fargo was downgraded just last week by Moody's Investors Service because of concern over an exposure to real estate problems.

In fact, eight of the top 10 have been downgraded in recent months, at least in part because of concern over real estate exposure.

The only banks in the top 10 that have not been downgraded by Moody's are BankAmerica's fifth-ranked Bank of America unit, San Francisco, which Moody's upgraded on the basis of its modest exposure to new real estate loans and ninth ranked NCNB National Bank of North Carolina, whose rating was unchanged.

This year's ranking shows Citibank well ahead of its closest competitor, with $16.3 billion of real estate loans, following by Wells Fargo's $9 billion. The ranking indicates Citibank was among the fastest-growing real estate lenders, with 30% growth, although the bank disputes that figure.

Officials of Citicorp, reiterated the banking giant's commitment to commercial real estate lending. But they complained that list exaggerated the growth of its real estate operation in 1989.

Ferguson & Co., Irvine, Texas, using banks' reports to the regulators, said Citibank's portfolio of commercial loans grew by about 30%. Citibank officials acknowledged that that level would be cause for concern.

But executive vice president Thomas E. Jones contended the 30% figure was "a figment of an imprecise measurement system." He argued that reports to the Securities and Exchange Commission provided a truer measure than the report to banking regulators used by Ferguson.

"The 1988 to 1989 year-to-year growth of this business was 12.7%, reflecting normal growth for the period," Mr. Jones said in a letter to the *American Banker*.

He contended the statistics unfairly represented Citibank's activity in that they "represent Citibank only, and not the corporation as a whole, include individual (noncommercial) loans . . . include lending activity from overseas branches and do not include adjustments (for example, changes in classifications)."

Estimate Given

Mr. Jones, citing the SEC report, estimated commercial real estate loans at $12.5 billion.

But the *American Banker* and Ferguson stand behind the higher numbers.

The downgrade of Wells by Moody's came despite the fact that the bank survived a targeted real estate exam by regulators in the fourth quarter with no significant writeoffs.

A spokeswoman dismissed the rating action by saying that average chargeoffs for Wells Fargo real estate losses have averaged only 13 basis points from 1975 through 1989. That performance was better than the 55 basis point level of chargeoffs for the bank's total lending operation.

Problems Not Foreseen

"The rating agencies did not forsee what happened in Texas, New England, and Arizona, and they're trying to be more proactive," said Leslie Altick, chief spokeswoman.

She said Moody's prefaced the downgrade announcement by noting the diversity of Wells' portfolio and its conservative

DEALMAKERS

Trend-Spotter Looks to London for Deals

By STEPHEN KLEEGE

In the midst of a chorus of warnings about collapsing real estate markets, there are still a few voices that take the contrarian view.

One such voice belongs to Stephen F. Anfang, founder of Anfang Resources, New York, who boasts of past successes investing early in undervalued property in "transitional" neighborhoods of New York such as Soho and the East Village.

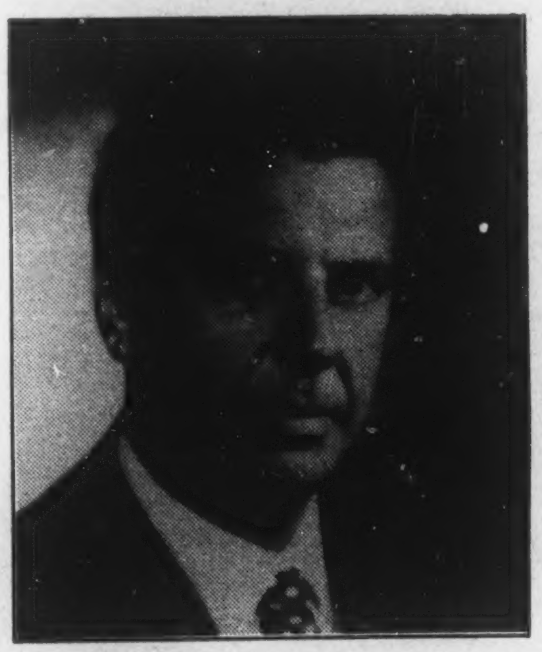
Because their regulators are breathing down their necks, Mr. Anfang says banks are pulling back at exactly the time they should be investing in some markets.

"Everybody wants to play it safe, and because they play it safe, they get into trouble," Mr. Anfang asserted.

Waiting Too Long

Banks tend to wait to invest until the national news media identify a market as strong, but by then it's too late, he said. "The smart play is two years before *The New York Times* publishes an article."

Mr. Anfang is now focusing overseas for the first time, specifically on London, where an oversupply of commercial real estate in London has spooked many investors.



Stephen F. Anfang
Anfang Resources

But Mr. Anfang likes to quote Baron Rothschild's advice to "buy when there is blood in the streets." He is convinced that London's cyclical rebound will be all the more pronounced because of the city's position as European banking capital when financial barriers are lowered in two years.

High Expectations

He believes he can finance his acquisitions at 15% and still earn a profit for his wealthy investors, based on expectation of improved profits due to improvements to the property and a stronger market.

"I'll take a bigger risk but I'll take a bigger reward," he said.

The acceptance of English as the international language and the city's sophistication give London the edge over other European cities that may vie for the title of banking capital come 1992, Mr. Anfang said. He added that the tunnel being built under the English Channel will help, too.

He has his eyes on one deal for four small commercial buildings with retail space on the ground floor.

"I'll always stick to my niche in the market," said Mr. Anfang, who intends to concentrate on such properties, which he believes will become desirable as headquarters for small and mid-size corporations in the coming years.

"Retail property in a city is an irreplaceable asset, because in cities there are usually limitations on land mass," he said. Cities bordered by water or other natural boundaries tend to grow taller, "but there's still limited ground level space," for retail. □

Data Sources: Data are from the federal regulatory "Reports of Condition and Income" filed by all federally-insured commercial banks. Most of the data are from **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex. Ferguson does not adjust its data base for mergers. Thus, some of the large percentage gains may be attributable to merger. Data on noncurrent real estate loans and net charge-offs were taken from **Lotus One Source**, a data base supplied by **Sheshunoff Information Services Inc.,** Austin, Tex. **Commercial real estate loans** are domestically booked construction and land development loans, loans secured by multifamily (5 or more) residential properties, and loans secured by nonfarm nonresidential properties. **CR as a % of Assets:** is commercial real estate loans outstanding on 12/31/89 divided by total assets on 12/31/89, expressed as a percentage. **Total Noncurrent Real Estate Loans:** include all real estate loans— commercial plus residential— that are 90 days or more past due and all nonaccrual real estate loans to U.S. addressees. **Noncurrent as a % of Real Estate Loans:** is all noncurrent real estate loans divided by all real estate loans outstanding, expressed as a percentage. **Real Estate Net Charge-offs:** include all charge-offs on real estate loans held by U.S. addressees less corresponding recoveries. **Noncurrent as a % of Real Estate Loans:** is all noncurrent real estate loans divided by equity capital, expressed as a percentage. **(¹)**— Unless indicated otherwise, the 1988 totals were for the top 100 banks that year. **(²)**— An unweighted average, and 1988 average was for the top 100 banks in 1989.

Data Sources: Data for the top 200 banks are from the federal regulatory "Reports of Condition" filed by all federally-insured commercial banks. **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex., was used to generate the listing. Data for all federally insured banks provided by the **Federal Deposit Insurance Corp.,** Washington, D.C. **Construction and land development loans (C&L Develop. Loans)**— a component of commercial real estate loans— are loans secured by real estate with maturities of 60 months or less made to finance land development preparatory to erecting new structures or the on-site construction of industrial, commercial, residential, or farm buildings. Construction loans include the construction of new structures, the additions and alterations to existing structures, and the demolition of existing structures to make way for new structures. (Schedule RC-C, Column B, item 1.a.)

Data source: **ADP Data Services Division, New York,** from its data base of the federal regulatory report of condition. ADP adjusts its data base for mergers. **Description of the table:** for the 614 commercial banks in the U.S. with assets over $500 million on Dec. 31, 1989, American Banker identified the 145 banks whose commercial real estate lending grew 200% or more over the four year period ended Dec. 31, 1989. These 145 banks were arrayed in order of their ratio of bad real estate loans to total real estate loans on Dec. 31, 1989. The banks above are the 25 banks in the group of 145 with ratios greater than 3%. The 3% cutoff was chosen because the average ratio for banks in states where real estate loan problems have emerged is 3% or more. **Bad Real Estate Loan Ratio (BRL Ratio):** The ratio of total noncurrent real estate loans to total real estate loans. **Total Noncurrent Real Estate Loans:** include all real estate loans— commercial plus residential— that are 90 days or more past due and all nonaccrual real estate loans to U.S. addressees. **Growth in CREAL Lending**: is growth in commercial real estate lending over the four-year period 12/31/85 to 12/31/89. **CREAL Loans Outstanding:** are commercial real estate loans outstanding. These loans are the sum of domestically booked construction and land development loans, loans secured by multifamily residential properties, and loans secured by nonfarm nonresidential properties. **CL/CREAL Ratio:** is the ratio of construction and land development loans to commercial real estate loans. **CREAL/REAL Ratio:** is the ratio of commercial real estate loans to total real estate loans. **CREAL/Assets Ratio:** is the ratio of commercial real estate loans to total assets. **CREAL/Equity Ratio:** is the ratio of commercial real estate loans to total equity capital. **BRL/Equity Ratio:** is the ratio of total noncurrent real estate loans to equity capital. **(¹)**— Bank was acquired by Bank of New England NA, Boston on 2/9/90.

W.Va. Sues Brokerage Over Pool's 1987 Losses

By GEOFFREY A. CAMPBELL
The Bond Buyer

WASHINGTON — West Virginia has sued Chase Securities Inc. for $13.75 million, alleging the company played a blameworthy role in $279 million of market losses the state's consolidated investment pool suffered in 1987.

The state filed its complaint in the West Virginia Circuit Court for Kanawha County, alleging that put options urged upon state officials by Chase were "inappropriate."

"State officials clearly were misled by Chase salespeople about the nature of the investments and the appropriateness of the investments," said Thomas J. Gillooly, a West Virginia assistant attorney general.

Chase Rejects Claim

Ken Mills, a spokesman for Chase, said the firm believes it acted properly in all dealings with the state and that "there is no basis in law or fact to support their claims." "While we regret their action," he added, "we fully expect to prevail at trial."

West Virginia is ensnarled in litigation with three Wall Street firms in connection with the 1987 losses; it is seeking a total of $145 million from the firms.

The brokers — Salomon Brothers Inc., Morgan Stanley & Co., and Goldman, Sachs & Co. — have countersued the state for more than $300 million, the amount they claim the state earned on trades.

West Virginia claims the firms enticed officials to violate state laws and investment guidelines by entering risky trades. The brokers countered that the state treasurer's office at the time was the state's sole money manager and that the pool accounts were nondiscretionary.

2d Case in U.S. Court

That dispute is before a U.S. District Court in West Virginia. The court must decide whether the case should be heard in federal or state court, a ruling that is expected within a few weeks.

The state has reached out-of-court settlements for just less than $5 million with Greenwich Capital Markets, County NatWest Inc., the banking subsidiary of Citicorp, Shearson Lehman Hutton Inc., and Merrill Lynch Pierce Fenner & Smith.

State officials for months had sought a settlement with Chase but by last month had grown frustrated at the slow pace of talks.

The state's suit against Chase focuses on two transactions. In one, Chase allegedly sold the state a put option that yielded a $6.9 million loss. In another put option transaction, the state claims a loss of $6.6 million.

Mr. Gillooly, the assistant attorney general, said tape recordings of the deals, which were transacted by phone, demonstrated clearly that the state treasury official who authorized the purchases was unsophisticated in financial affairs and relied heavily upon the advice of Chase sales representatives.

The West Virginia pool debacle led to the resignation of former Treasurer A. James Manchin, who left office a day before the state Senate was to begin an impeachment trial against him.

James B. Lees, a Charleston, W.Va., lawyer hired by the state House of Delegates to prosecute the impeachment case against Mr. Manchin, concluded in a special report that West Virginia would be ill-advised to sue brokers over the pool losses.

However, state officials played down Mr. Lees' recommendation, noting that he was hired for impeachment proceedings, not to determine whether the state should sue brokers.

Citibank Tops Real Estate Loan Ranking

Continued from *page* **18**

underwriting. Ms. Altick said the company was downgraded on the mere possibility that its large Calfornia exposure may necessitate writedowns if the state economy goes into a recession – something she termed unlikely.

About 70% of Wells' portfolio is in California.

Ms. Altick noted Wells' portfolio actually shrank slightly in 1989, and would have shrunk by about an additional $300 million, had the ranking excluded real estate loans the bank took on when liquidating a subsidiary.

The decline, she said, reflects market conditions. Wells' policy, she said, is to base lending on the worthiness of projects rather than production goals.

Wells lends to all major property types, although its exposure to condominiums, mobile home parks, and strip shopping centers is minimal, she said.

No Comment from Chase

Ken Mills, a spokesman for third-ranked Chase, declined to comment on the survey.

Chase made a $225 million provision for credit losses in the first quarter of this year, attributing the $75 million increase over the provision in the first quarter of 1989 primarily to the potential impact of deterioration in domestic real estate markets. Whereas the 1989 provision included $50 million for refinancing countries, neither the fourth-quarter provision nor the provision in the first quarter of this year by Chase included any such element.

In a statement at a recent shareholders meeting, chairman Willard C. Butcher said Chase began to limit growth and tighten underwriting two years ago.

Mr. Mills explained a 36% increase in the firm's real estate loans by pointing out that $1.7 billion of loans that had been booked in overseas locations were transferred to domestic offices in 1989.

The biggest chargeoff for real estate loans was the $226 million taken by BancOne Texas, Dallas, a unit that was acquired by Banc One Corp., Columbus, Ohio. □

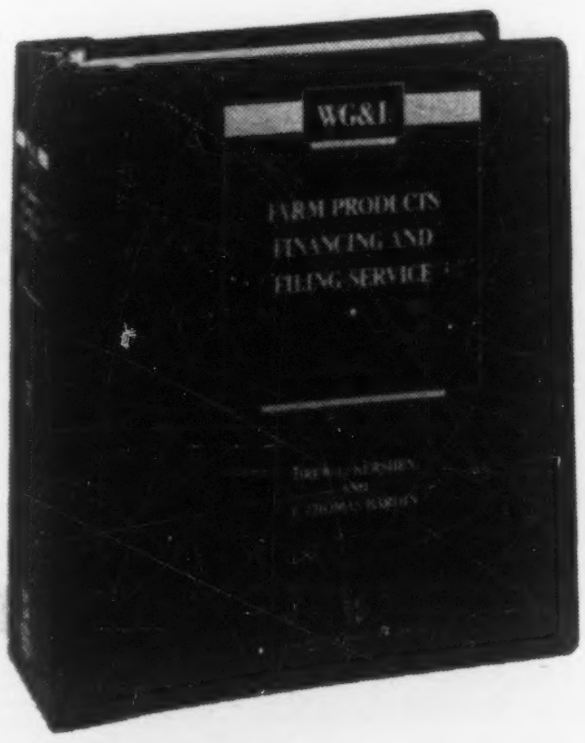
If you have a secured interest in

this...

this...

or even this...

here's how to protect it.



It used to be that when you made a secured loan to a producer of farm products, your interest was automatically protected by the farm products exception of the UCC.

Then came Section 1631.

Now you have to give *actual notice* that a farm product is serving as collateral against a loan. And because each state has its own notification system, there are literally *fifty* sets of rules and regulations that you must comply with. Or you risk losing your protection.

Cause for concern, but not for alarm.

Because now, **Farm Products Financing and Filing Service** gives you all the information you need to ensure that your secured interests in farm products are protected under Section 1631.

This is the only in-depth examination of Section 1631 available. It analyzes all the legal issues surrounding the allocation of risks among lenders, buyers, selling agents and commission merchants. Examines the two notification systems Section 1631 creates–PNS and CNS. And offers practical guidance on how to file valid PNS and CNS notices–including sample forms and schedules for state CNSs.

And since Section 1631 is in its infancy, and litigation and changes to its requirements will no doubt occur, **Farm Products Financing and Filing Service** is updated three times a year with special supplements that keep you apprised of *any* new developments and changes.

Call now for more information. Or to receive a copy to examine for 30 days without obligation.

Call 1-800-950-1210 now.

Top Tier of Business Lenders Reshuffled

Continued from page 9

ers – the larger and higher quality companies in general – to limit the use of the bank market and access the public markets when there is an advantage to doing so," said Peter Smith, chairman of Morgan's credit policy committee.

But Mr. Bove, the Dean Witter analyst, explained the decline another way, saying that Morgan recognized it "can't get an adequate return by providing money to that market and has pulled back."

Morgan's outstanding commercial and industrial loans fell 9.45%, to $10.05 billion, last year. As a result, it fell from sixth place in 1988 to 11th place in 1989.

In Texas, meanwhile, an "aggressive marketing plan" accounted for a 55% rise in outstanding C&I loans last year at NCNB Texas National Bank of Dallas, according to Kenneth Lewis, president of the NCNB Corp. banking unit.

"We think we were substantially beating our competition" in gaining new business, Mr. Lewis said, and "that continues to be the case this year."

The 55% increase in outstanding business loans represented "new incremental business earned the hard way," he added. "It had virtually nothing to do with acquisitions."

NCNB Expects Growth

To be sure, Mr. Lewis said, he doesn't expect to repeat last year's huge jump in business, though he projects robust growth in commercial and industrial loans of 12% to 15% annually for the next three to five years.

"We see the Southwest – particularly Texas – beginning to rebound," the NCNB official said. Production loans made the bank's energy group the fastest-growing sector, Mr. Lewis said.

"These are not Fortune 500 companies," he said of the bank's business customers, but rather middle-market companies that don't have access to the commercial paper market.

In Newark, N.J., a whopping 78% increase in outstanding C&I loans at Midlantic National Bank reflected the consolidation of the Midlantic Corp. unit with two other Midlantic affiliates in New Jersey, a Midlantic spokesman said.

Midlantic's outstanding C&I loans rose to $3.3 billion at year-end 1989, from $1.8 billion a year earlier. □

Mitsui Trust Acquires Futures, Options Unit

NEW YORK — Mitsui Trust Bank (U.S.A.) said it had acquired the foreign currency options and futures trading operations of Cooper Neff & Associates, Philadelphia.

The bank, a subsidiary of Japan-based Mitsui Trust and Banking Co., said the operations will become a new subsidiary, Mitsui T and B Options Inc. Thirty traders from Cooper Neff will join it.

In addition, 10 Cooper Neff traders will join Meredith Overbrook Partners, a new firm that will provide trading software for Mistui. — **Reuters**

VOL. CLV NO. 120 | Wednesday, June 20, 1990 | 155th year

For Investors, Asset Quality Worries Prevail

By KELLEY HOLLAND

In today's jittery market, concern about asset quality is overtaking a traditional focus on interest rates and changing the way investors treat bank stocks.

At the end of April, when long-term bond rates started falling, investors reacted as if bank stocks were still an interest-rate play, as in the good old days. The Keefe Bank Index shot up 17.9% between April 27 and June 1.

ANALYSIS: *Follow-up on the news*

But sobering reminders about asset quality – reminders in the forms of ratings downgrades, Donald Trump's cash squeeze, and more loan writedowns – stopped the rally in its tracks. The average bank stock, as measured by Keefe, fell 4.9% in the first two weeks of June, even though bond yields barely changed.

Indeed, asset quality is becoming increasingly important to bank profitability. And investors are coming to realize that asset quality is in greater danger when interest rates fall and the economy is, presumably, slowing down.

Less Rate Sensitivity

That means lower interest rates are not always a bullish signal for banks, and traders may be missing the full picture when they become positive on bank securities simply because rates are declining.

"I've always been puzzled by the effect of interest rate moves and how they've affected bank stocks," said a chief financial officer at a major regional bank.

Banks have historically been considered interest sensitive, with funding costs falling when interest rates decline. That's because in the past most banks borrowed short term to fund long-term loans – so when interest rates fell, their funding costs dropped but their income did

Clarification

A table published Tuesday on page 1 showed that commercial real estate loans on the books of Midlantic National Bank increased 80% in 1989. Most of that increase was due to the inclusion of loans from two affiliates that merged with Midlantic last year. Excluding the effects of the consolidation, Midlantic's commercial real estate loans grew 4.8%.

LATE NEWS

Fed Plans to Ease Rule on Fund Sales

The Federal Reserve Board said late Tuesday afternoon it planned to allow bank holding companies and their subsidiaries to sell the mutual funds of investment management companies they advise.

That practice is currently prohibited because of potential conflicts of interest. Banking companies can now either sell mutual funds or advise fund managers. The proposal is out for public comment until Aug. 9.

Paper Mart Looks to Go Paperless

By RICHARD LAYNE

NEW YORK — Moving to improve efficiency and reduce risks in processing commercial-paper transactions, financial institutions and corporations are preparing to test an automated settlement and safekeeping system similar to that used for other securities.

Pending approval from the Federal Reserve Board and Securities and Exchange Commission, a small-scale test of the system will begin in September at the Depository Trust Co. of New York, which operates clearing systems for major banks and securities firms.

A Substantial Test

The initial test will involve an expected 10% of the more than $500 billion in commercial paper outstanding, rising to 55% in 1992, according to Depository Trust Co.

The test will be a result of an initiative begun in 1988 by a 14-member Public Securities Association task force, which represents the biggest commercial-paper dealers, issuers, and issuing and paying banks. They are seeking to extend the book-entry method of securities settlement into the fast-growing commercial-paper market.

Risks to Be Reduced

Bankers say the book-entry method will cut several risks in commercial-paper transactions, such as daylight overdrafts on the Fed Wire and the failure of couriers to make deliveries. They also see a potential reduction in operating costs or fees of paper issuers, banks, and investors.

In the contemplated book-entry system, existing commercial paper will be converted into

Most Buyers Shun Gibraltar As Bidding Deadline Passes

By TERESA CARSON

LOS ANGELES — Far fewer institutions than expected have submitted bids for Gibraltar Savings, California's largest seized thrift, industry sources said Tuesday.

More than a dozen potential investors studied the $5.7 billion-deposit thrift's books, but most dropped out after seeing the deterioration in Gibraltar's franchise after 15 months as a ward of the government, the sources said.

"In the beginning, we all thought there would be 10 to 12 bids," said one investment banker.

It was unclear how many bids were actually filed, but sources familiar with the process said that there were probably no more than five, possibly as few as two or three.

Tuesday was the deadline for bidding on the thrift, which is based in the Los Angeles suburb of Simi Valley. The original deadline was June 10, but regulators extended it hoping to generate more interest in the thrift, sources said. The winning bidder is expected to be an-

NCNB Corp. Decides to Sit Out Bidding to Buy Failed CenTrust

By KENNETH CLINE

ATLANTA — Apparently unwilling to pay the high premium required, NCNB Corp. confirmed Tuesday that it has not bid for the failed CenTrust Bank of Miami.

The Resolution Trust Corp. on Tuesday began reviewing bids for CenTrust, the largest of 141 insolvent savings and loans it has slated for sale by June 30. The winning bid is expected to be announced within a few days.

Speculation on Bidders

The RTC declined to comment, but industry speculation on likely bidders included Citicorp of New York; Barnett Banks Inc. of Jacksonville, Fla.; and SunTrust Banks Inc. and Citizens and Southern Corp., both of Atlanta; Great Western Bank, Beverly Hills, Calif.; and Golden West Financial Corp., Oakland, Calif. The deadline for submitting bids was last Wednesday.

Industry observers were surprised at NCNB's decision to sit out the CenTrust sale. Since passage of federal thrift bailout legislation last year, NCNB has bought more failed thrifts than

Union Bank Tries to Combine Cultures

UNION BANK: Seishichi Itoh must unite two diverse banks.

By SAM ZUCKERMAN

SAN FRANCISCO — Union Bank's pedigree is Japanese, but its aspirations are decidedly American.

Having established itself as the top-performing Japanese bank in the United States, the Bank of Tokyo unit is ready to take on the biggest and best California institutions. Despite its foreign ownership, Union wants to be seen as apple pie, not sushi.

Emulating Bank of America

"Look at Bank of America," California's largest, said Union's president and chief executive, Seishichi Itoh. "It used to be the Bank of Italy. We can be the second Bank of America."

Mr. Itoh's institution is the biggest Japanese-owned full-service bank in the United States, with about 170 branches throughout California and $16.1 billion in assets. Its retail and middle-market lending operations are larger than those of any other Japanese-owned institution. And its performance is more

PEOPLE *in the news*

New Mexico's Regulator Has a Beef with the RTC

By STEVE KLINKERMAN

DALLAS — New Mexico bank regulator Kenneth J. Carson Jr. trusted the Resolution Trust Corp., and now the agency has usurped his state's branch banking law.

As director of New Mexico's Financial Institutions Division, Mr. Carson became worried about the RTC's intentions several months ago. The more than 50 state banks he supervises were supposed to abide by strict branching laws.

Steve Klinkerman

Kenneth J. Carson Jr.

But in marketing presentations, the RTC was telling state banks they could disregard New Mexico law when acquiring failed thrifts from the agency. "It's as though the RTC is intent on destroying state charters," said Mr. Carson during an interview in early April.

Only weeks later, Mr. Carson got wind of the agency's plans to sell New Mexico Federal Savings Association, Albuquerque. If a New Mexico bank won the bidding, the RTC promised, the bank could convert the thrift's offices into a branch network that would cross several county lines – a privilege not permitted by the state of New Mexico.

A similar case had come up in Colorado in February. The state's attorney general and the Colorado Independent Bankers Association responded with litigation, gaining a temporary injunction against the RTC. The agency then reworked a thrift sale to conform with state law.

Attempt at Dialogue

Mr. Carson knew about the precedent but decided against an immediate lawsuit. Instead, he tried to open a dialogue with the RTC, hoping he could persuade the agency not to attempt an override of New Mexico's laws.

He trusted the agency when it sent a letter saying: "We will be in touch with you as soon as possible after the bid openings to discuss New Mexico law. . . ."

Then a Fax Arrived

It was the wrong move.

The RTC's promised discussion turned out like this: Six days after bids for New Mexico Federal were opened, the RTC sent a facsimile letter stating the agency's intent to sell the thrift less than 48 hours hence in a transaction that would override New Mexico law. Period.

Mr. Carson and the Independent Community Bankers Association of New Mexico rushed into court. "New Mexico got pushed into a corner, and we had to defend our state laws," he said.

The RTC finally agreed to delay action until a court hearing could be held. But last Thursday, U.S. District Judge Santiago Campos declined to issue a restraining order against the RTC. The agency completed the sale of New Mexico Federal on Friday to First National Bank in Albuquerque.

Second Thoughts

Now Mr. Carson, who is 35, looks back and wonders if he could have done more. "It's tough," he said. "I never expected New Mexico to be the first state where an override would be pushed through."

With First National Bank in Albuquerque now enjoying the privilege of cross-county branching, Mr. Carson expects New Mexico's branching restrictions to be overturned altogether by the legislature.

A Matter of Fairness

Proponents of statewide branching will argue that the restrictions should be dropped as a matter of fairness to First National's competitors, he said.

And though the regulator expresses no personal opposition to the prospect, he regrets that it was the federal government who got the ball rolling on what could be one of the biggest recent changes in New Mexico's banking law. ☐

Ailing Bank of New England Sells Two Properties for $31 Million

BOSTON — Bank of New England Corp. said it has sold two real estate properties for about $31 million.

The properties include four apartment complexes in Phoenix with 1,093 units and 47 condominiums in the North End of Boston.

Subsidiary Was Agent

The properties were sold by Barnside Realty Corp., a Bank of New England subsidiary.

The bank said that the proceeds from the sale, its largest real estate sale to date, would provide an additional boost to its recovery.

Chicago-Based Buyer

Robert Sheridan and Partners, a Chicago-based developer, purchased the Phoenix properties. The Boston condominium units were sold individually at auction.

More Serious Charges Made Against Neil Bush

By ROBERT M. GARSSON

WASHINGTON — The Office of Thrift Supervision drafted an order accusing President Bush's son Neil of favoring the interests of his oil exploration company over those of the failed savings and loan association of which he was a director.

The charges were broader than previously disclosed OTS conflict-of-interest accusations, which Mr. Bush has repeatedly denied. An OTS spokesman described the document as a draft but would not say whether the charges were dropped in the investigation that led to the regulator's seeking of a cease-and-desist order against Mr. Bush.

The latest disclosure, made Tuesday during a House Banking Committee hearing into the failure of Silverado Banking, Savings and Loan Association, cited Mr. Bush for having "willfully breached his fiduciary duty" to the Denver-based thrift, which regulators closed in December 1988.

Disclosure of the OTS document is likely to embarrass President Bush as his administration is struggling to come to grips with the increasingly costly savings and loan bailout.

The document is also likely to add fuel to charges by congressional Democrats, made most forcefully on Tuesday by Rep. Frank Annunzio of Illinois, that Silverado received preferential treatment from regulators because of Mr. Bush's presence on the board.

The OTS draft sought to bar Mr. Bush from taking part in the management of a financial institution.

Mr. Bush is currently the subject of an OTS administrative law proceeding that could lead to the issuance of a less serious cease-and-desist order against him.

Two others cited in the order disclosed Tuesday, Silverado chairman Michael R. Wise and executive committee chairman W. James Metz, did not contest the charges.

The OTS contended that Mr. Bush's oil exploration company received a $3 million commitment from partner Kenneth M. Good at the same time Mr. Good was receiving loan concessions from Silverado valued at more than $11 million. The concessions were based on Mr. Good's "reported financial problems."

At the same time, Mr. Good planned to contribute additional money to Mr. Bush's company that would pay down a $750,000 loan Mr. Bush had personally guaranteed.

Informaton Withheld

Mr. Bush violated his "fiduciary duty to Silverado Banking by failing to disclose to the other directors that Mr. Good was committed to contribute more than $3 million to [JNB Exploration, the oil venture] while the other directors were being told that Good probably would not be able to meet his financial obligations," the OTS order said.

The Bush Argument

Mr. Bush's lawyer, James E. Nesland, gave a strikingly different interpretation of the transaction. Mr. Good's company, Gulfstream Development Corp., rather than Mr. Good himself, was to put up the $3 million, he said. He added that the company had the option – not the obligation – of putting up the money in return for an 80% stake in JNB.

Because Mr. Good was not free to use Gulfstream resources to pay his own debts, Mr. Bush believed the transaction involving JNB was irrelevant to Silverado's consideration of Mr. Good's loans, Mr. Nesland said.

At Tuesday's hearing, which featured appearances by regulators and former Silverado officers who had previously refused to testify, lawmakers repeatedly asked why it took so long to close Silverado and to remove officers. ☐

Lincoln Was Keating Tool, Lawyer Says

By DEBRA COPE

WASHINGTON — Federal regulators seized Lincoln Savings and Loan Association because it had become merely a real estate investment fund for its parent, American Continental Corp., an attorney for the government said Tuesday.

American Continental's chief, Charles H. Keating Jr., used the Irvine, Calif., thrift for shrewdly timed deals that shifted profits and $94 million in tax payments from Lincoln to its parent, attorney James Murphy of Squires, Sanders & Dempsey told U.S. District Judge Stanley Sporkin.

Lincoln, which was placed in conservatorship in April 1989 and declared insolvent last August, has cost the Resolution Trust Corp. $1.2 billion so far.

Judge Sporkin, who has held 30 days of preliminary hearings on Mr. Keating's bid to regain control of Lincoln, will rule whether the case should proceed to a jury trial.

Mr. Murphy, in final arguments defending the Office of Thrift Supervision's takeover, argued that it had not acted arbitrarily. ☐

Clarification

A table published June 19 (page 15) incorrectly included two banks as among those with the highest percentages of bad business loans to total business loans. The two banks heading the list — Bank One Texas, Dallas, and Team Bank, Fort Worth — were reorganized with federal regulatory assistance last year. Although the inventory of bad loans is on their books, the banks are not assuming the risk for these loans; the government has assumed that risk.

COMMENT/*By Richard G. Leland*

Lender Liability in Cleanups Presents Workout Dilemma

A recent decision by the United States Court of Appeals for the 11th Circuit in Atlanta has widened the potential for lenders to be held liable for cleanup of hazardous substances on their borrowers' properties.

This liability has long been a risk associated with foreclosing loans on industrial and commercial property that has the potential of being contaminated. It now looms largely for nonforeclosing lenders looking to cut or minimize their losses on bad loans.

In an era in which workout departments are becoming larger than loan departments, the decision is portentous.

The case, *United States v. Fleet Factors Corp.*, arose under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, commonly known as Superfund. Under Superfund, an owner or operator of a facility at which there has been a release of hazardous substances is strictly liability to reimburse the Environmental Protection Agency for costs it expends for cleanup.

Two kinds of owners or operators are liable: those who own or operate at the time the EPA begins its lawsuit and those who owned or operated at the time of a release of hazardous substances. A release includes a spill, discharge, or even gradual leaching of substances into the soil and groundwater.

The Fleet case vastly and, in this writer's opinion, improperly expanded the circumstances under which a lender that does not foreclose can be found to be an owner or operator.

As its name denotes, Fleet Factors Corp. is a commercial factor. In 1976, it entered into a factoring arrangement with Swainsboro Print Works, a textile finishing company that operated a plant in Swainsboro, Ga.

Collateral on a Debt

To collateralize its loan, Fleet obtained liens on accounts receivable, inventory, fixtures, and equipment. It also obtained a lien on the real property. Under Georgia law, that lien was a deed to secure a debt, not a traditional mortgage.

During the course of a workout (which followed an unsuccessful attempt at a Chapter 11 reorganization), there was an alleged release of hazardous substances at the plant. EPA spent about $400,000 for cleanup, then sued Fleet. EPA claimed that Fleet, by its conduct during the workout, became an owner or operator of the plant.

Superfund contains an important exemption for lenders. It provides that a secured lender which holds ownership of a facility primarily as a means of evidencing or perfecting its security interest is not an owner or operator unless the lender participates in the management of the borrower.

Early interpretations of that exemption, including the lower court decision in the Fleet case, held that a lender did not participate in management unless it became involved in day-to- day activities that relate to the generation, use, or disposal of hazardous substances. Under those interpretations, lenders could exercise the kind of strict financial control necessary in working out a bad loan without being fearful that their activities in protecting their collateral will result in their being saddled with cleanup costs that vastly exceed the value of the property.

See **LENDER** *page* **10**

Mr. Leland is a partner with the law firm of Rosenman & Colin, New York, and chairman of the firm's environmental client services group. He successfully represented Fleet Factors Corp. in U.S. District Court, but not on the appeal discussed in this article.

GRAPEVINE/*By Jed Horowitz*

Adding Names. Look for the name "The HongkongBank" to be posted soon on the 51-story Manhattan headquarters building of Marine Midland Banks, sources said.

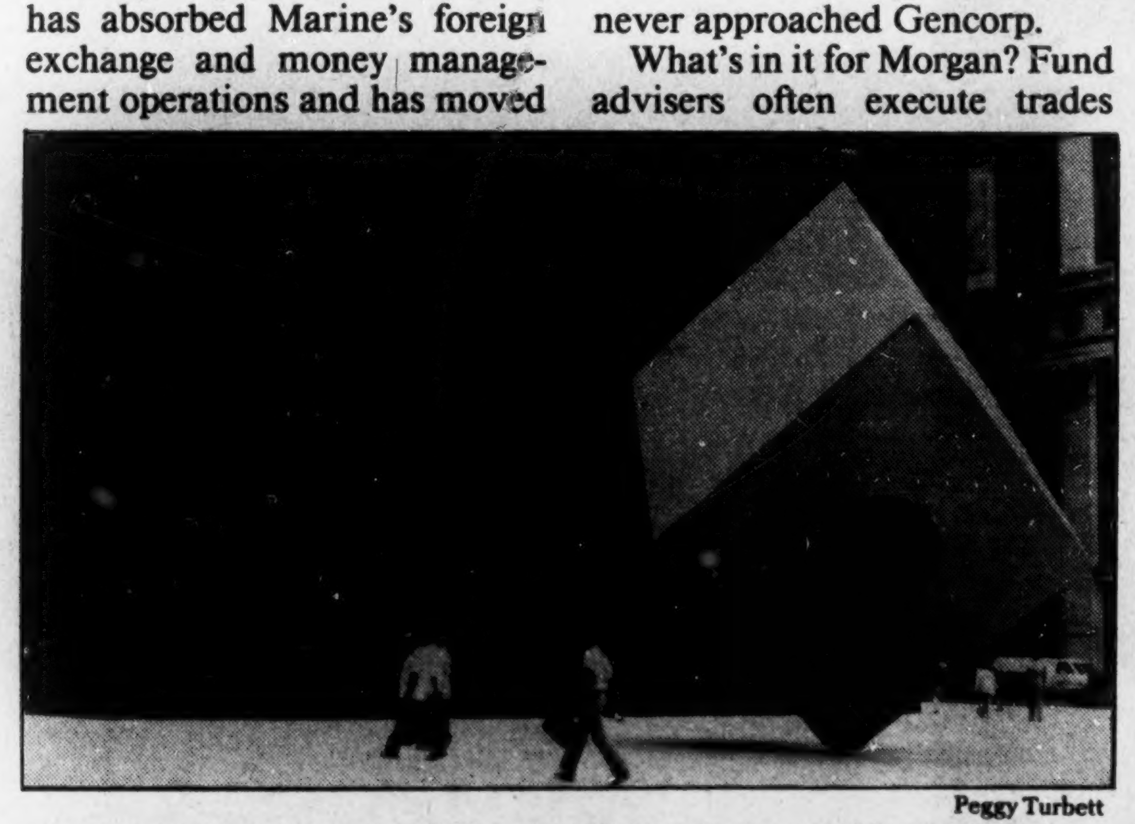
The addition would symbolize the dominance of Marine's Hong Kong parent over its U.S. subsidiary, which at one time filled about half the floors in the lower Manhattan skyscraper.

In the past six months, Hongkong and Shanghai Banking Corp. has curbed Marine's money-center ambitions and its payroll. About 1,000 Manhattan-area wholesale banking jobs have been eliminated, an official said, and New York City staffers continue to be transferred to the regional bank headquarters in Buffalo.

HongkongBank, meanwhile, has absorbed Marine's foreign exchange and money management operations and has moved into many of Marine's old quarters.

Marine denied rumors last week that it was slashing its public finance staff, although sources acknowledged the bank had considered excising its entire municipal banking division. Instead, Marine will simply prune a few more jobs in municipal bond trading, they said.

A decision on putting the Hongkong name on the Marine Midland Building is not final, a source said. If it does go up, he added, it will abut, not replace, the Marine name.



Peggy Turbett

NAME GAME: Marine Midland Building in lower Manhattan may soon sport the name "The HongkongBank," after Marine's parent.

* * *

BT Boosts Morgan Index. Bankers Trust Co. is managing a $100 million fixed-income pension portfolio for Gencorp that tracks J.P. Morgan & Co.'s new index of foreign government bonds. It is the first U.S. fund based on the Morgan index, and it represents a marketing "milestone," said Sharon O'Connor, a Morgan associate.

Morgan has been urging fund sponsors to set up passive index funds based on its market indicators ever since introducing a series of bond indexes in December. Ironically, the bank never approached Gencorp.

What's in it for Morgan? Fund advisers often execute trades through the compiler of the index, meaning commissions for J.P. Morgan Securities. "We understand the composition of our index best," Ms. O'Connor said.

Bankers Trust expects the Gencorp fund to be the first tranche of a much larger commingled trust, Ms. O'Connor said. Bankers Trust officials did not return calls for comment.

* * *

Aiming for a Comeback. Chase Manhattan Corp. is reorganizing its foreign exchange business to focus more on corporate accounts and high-net-worth individuals and perhaps less on proprietary trading. Since Richard Zecher, the bank's former treasurer, took the reins early this year, the heads of trading and sales have been replaced.

"We've been lighter in revenues than we should be," said Michael Esposito, Chase's chief financial officer. "We seem to have slipped a bit, and we'd like to make sure we get it all back."

* * *

Like Teller Lines. Thomas S. Johnson, president of Manufacturers Hanover Corp., told bank officers recently that the bank can replace its "slow-as-molasses" leveraged buyout business with the formerly lethargic energy and energy-related business sector.

"Because of tightening supply and demand factors, I think we're going to see tremendous deal activity over the next several years in energy, a sector that has practically been dormant during the recent period," he said.

* * *

Practice Session. Capital Link, a J.P. Morgan joint venture that aims to let issuers sell plain-vanilla debt directly to investors, held two practice sessions last week to familiarize investors with the computerized auction process.

There is no fixed date for the first real auction, said CapLink president David Jeffrey, but he added that six issuers are now qualified with the Securities and Exchange Commission to use the system. In addition to Morgan, they are Avco Financial Corp., McDonald'sCorp., GE Capital Corp., John Deere Capital, and Canada's Export Development Co.

* * *

Citicorp Beefs Up. Citicorp's depleted private placement department has divided itself into an origination and structuring unit and a distribution unit in separate locations, bank officials said. The uptown origination unit, headed by Timothy Conway, hired John Kjorlien from Shearson Lehman Brothers two weeks ago and may be close to bringing in one other refugee from that concern.

Chase Manhattan recently hired the former head of Shearson's private placement group, Joel Glasky, to run its private department. Brad Wheatley has moved downtown with Citicorp's fixed-income traders to coordinate the bank's distribution of privates.

* * *

Chemical Stahls Move. Chemical Banking Corp., which must decide by the summer of 1992 whether to sign a new lease at its headquarters building on Park Avenue, is being wooed by the Rockefeller Group to move into a complex being built on Manhattan's West Side, real estate sources say.

But the cheap rental base from which Chemical is starting and the difficulties of building new trading floors make it likely that the banking company will re-up with landlord Stanley Stahl. He is the same landlord who is making a hostile run at Apple Bancorp.

* * *

Bonus on the Dividend. First Wachovia Corp. is considering boosting its generous dividend to a payout above the 40% of earnings level, bank officials told analysts recently. A dividend increase is one way to deal with the North Carolina bank's persistent problem of having too much capital and not enough outlets on which to spend it. ☐

Small Banks Hold The Trump Cards In Loan Workout

By STEVEN LIPIN

Donald Trump's negotiations with his lead banks are said to be intense, a term that could apply equally to the talks between the lead banks and members of the banking syndicate.

The lead lenders are finding it difficult to persuade the smaller institutions – as many as 100 – to go along with a debt-restructuring package and commit at least $60 million in new loans. Large banks are again stuck in the position of persuading 100% of a company's bank creditors to go along with a debt-restructuring package.

ANALYSIS: *Follow-up on the news*

Agent banks are reportedly seeking permission from the smaller banks to postpone interest payments on at least part of Trump's $2 billion in bank loans. The big banks also want syndicate approval to extend the Trump properties already posted as collateral for the outstanding bank loans to cover the new $60 million package as well.

Just as small banks were close to torpedoing the debt restructurings of Campeau Corp. and Interco Inc., they are again stymieing the large banks that want to restructure the Trump Organization, lend it fresh cash – and keep it out of bankruptcy court.

Drawbacks of Loan Sales

Money-center banks are now seeing the pitfalls of the loan-sales wave of recent years, some bankers believe. And the language of many agreements that selling banks made with small buyers requires the large banks to vote as the small banks do in any restructuring talks.

"I hate to use the cliche, but it's the tail wagging the dog," complained one banker who has battled with smaller lenders.

"To the degree that banks have participated out the loans, it creates interbank creditor friction," said Wilbur Ross, managing director at Rothschild Inc.

Mr. Ross said some of the agent banks' problems arise because they can often hold less of a loan than the participating banks, "which does not give them much credibility and clout with participants." He believes loan documentation must be changed to eliminate the need for 100% approval.

Ironically, this divisiveness among large and small bank lenders comes at a time when bond creditors are organizing and speaking with a more unified voice.

While the move to sell assets has meant a diversification of

Consumer Loans' Share of Lending Market Grows...

And Home Equity Loans Are Fastest-Growing Segment

Source: American Banker

Consumer Loans Surge 4th Year With Home Equity Hottest Area

By YVETTE D. KANTROW

The consumer lending market is growing rapidly, and home equity loans are leading the way.

The second mortgages grew by 27% last year, three times as fast as other consumer loans, according to an *American Banker* survey. (Tables ranking the top lenders begin on page 14.)

Growth in Most Categories

Home equity loans still make up only a small percentage of consumer loans outstanding – about 7%. But they are growing at rates reminiscent of the ascent of credit card loans in the mid-1980s. And observers say that while growth may slow this year from last year's torrid pace, it will remain rapid.

The annual survey also found that:

- The consumer loan market grew by a robust 10.6% in 1989, marking the fourth straight year of growth between 10% and 11%. Consumer loans on the books of federally insured banks stood at $751.5 billion at yearend.
- The share of the total lending market held by consumer loans continued its steady increase, moving up to 36.5% from 35.2% at the end of 1988. The increase reflects an ongoing restructuring of commercial bank balance sheets, which now hold significantly more consumer loans than business loans.
- A handful of giant California banks increased their con-

Fed Allows Discount Links for Credit Cards

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board on Wednesday permitted bank credit card affiliates to offer discounts on the condition that customers buy other bank products.

Traditionally, bank holding company affiliates have been barred from offering one product to a customer on condition that another be bought, a practice known as "tying."

Norwest, NCNB Applied

But the Fed, responding to applications from Norwest Corp., Minneapolis, and NCNB Corp., Charlotte, N.C., allowed the exception to Section 106 of the Bank Holding Company Act Amendments of 1970, which prohibit tying.

The Fed also, in effect, made the exceptions applicable to other banking companies, such as Chase Manhattan Corp. and Citicorp, which issue credit cards through affiliated companies. It approved a general rule that would apply under the same circumstances approved for Norwest and NCNB.

District Fed bank boards,

Banks Tightening Realty Standards, Survey Indicates

By ROBERT TRIGAUX

WASHINGTON — Although the Federal Reserve's beige book released Wednesday shows there is little evidence that a credit crunch is spreading beyond the real estate sector, it indicates that lenders are continuing to tighten credit standards in anticipation of further deterioration of real estate markets.

The survey of economic conditions in the 12 Federal Reserve districts reported residential and commercial construction generally flat or declining. The survey saw prospects for further decline in coming months.

Excess Office Space

Excess office space in many parts of the country was hurting commercial building and housing sales in many areas.

"Constraints on credit seem to be primarily in real estate," the beige book stated.

By district, housing sales were down in Philadelphia, Rich-

Outsourcing Dispute Triggered Departure from First Fidelity

By KAREN GULLO

NEW YORK — The unexpected departure of the chief technology executive at First Fidelity Bancorp three weeks ago was tied to a dispute with top management over whether the bank should hire an outside firm to run its $100 million technology operation, sources close to the bank said.

Gary A. Provo, executive vice president in charge of technology, was asked to leave the New Jersey banking company because he opposed an outsourcing proposal backed by top managers, including chairman Anthony P. Terracciano, sources said.

Many large banks are looking at outsourcing arrangements, in which the technology operation is turned over to a firm such as International Business Machines Corp. or Electronic Data Systems. Outsourcing can save a bank up to 50% on technology expenses, say analysts.

Robert Paul Molay

HE WON: First Fidelity chief Anthony P. Terracciano.

Several midsize banks have farmed out technology operations. But, so far, no large superregional banks like First Fidelity have signed a

COMMENT/*By Stephen H. Axilrod*

The Fed's Inflation Fight Brings Results – and Risks

Markets in the United States have continued to be beset by uncertainties.

First, the bond market becomes convinced by weak retail sales figures that the Federal Reserve will ease. Then unexpectedly strong industrial production figures are published, and the market decides easing may be a long time coming.

Meanwhile, the stock market tentatively reaches new high ground, propelled it would seem mainly by momentum. Then doubts about business profits creep back into consciousness, and the market relapses.

Markets Watching Fed

The markets' backing and filling are connected to the question of how the Federal Reserve will resolve its policy dilemma or, indeed, whether it will.

The dilemma is easily stated. Labor costs seem to be rising about 4½% to 5% a year. Therefore, if the Fed succeeds in reducing price inflation to a significantly slower pace it risks causing a recession as profit erosion forces businesses to cut spending.

I would judge that the Fed is, in fact, making progress on curbing inflation. The latest monthly price figures are still a bit ambiguous. The increases were relatively little but could be interpreted as no more than offsetting unusually high first-quarter increases, leaving the inflation rate for the year to date at an unsatisfactory level.

Surer signs of at least some progress in containing inflation are the weaknesses that have been developing in the housing market and, lately, in consumer spending.

Consumers Inhibit Business

Cautious consumer behavior makes it much more difficult for businesses to pass along price increases. It raises hope that the slowing of price increases in the past month or so might signal a downturn in inflation, after two years of steadily creeping increases.

A good part of the pressure against price increases – asset as well as goods prices – stems from continuing relatively taut monetary policy. The Fed stopped easing in terms of money market interest rates late last year. Its posture in that respect has remained unchanged.

Whether that means overall credit and money conditions have also remained unchanged is yet another question. Apparently, banks and thrifts have tightened lending standards, partly in response to the regulatory situation and partly, and perhaps more important, in response to their own perceptions of the market.

Such an institutional tightening would not necessarily tighten overall credit conditions (compared with what they otherwise would be). If banks and thrifts have become less willing lenders, that should release funds to the market. Banks would bid less aggressively for corporate and other large deposits as well as for overnight funds, but this money would instead flow into market instruments.

Market Can Supply Credit

In that case, a less accommodative institutional environment would tend to be offset by more accommodative market circumstances. And credit conditions would not tighten, overall, except to the extent that some borrowers lacked direct or indirect access to the market.

It remains possible, however, that some overall tightening has occurred in recent months. Growth in all money supply measures weakened perceptibly in the spring, as compared with the winter.

Further weakening in the broadest measure of money, M3, occurred at the initiative of depositary institutions, and the credit was diverted to the market. But markedly slower growth of the narrower measures of money, M1 and M2, from a fairly good first-quarter pace could also reflect constraint on banks' reserve base as the Fed tries to prevent further easing of money market conditions when banks are not such active borrowers.

It is almost impossible in practice and in the short run to determine from money supply figures whether overall credit conditions are tighter than they otherwise would be or were intended to be.

At root, the dilemma is how close to, or how much beyond, the brink of recession the economy must go in order to bring down inflation permanently. The dilemma is even greater when it is not crystal clear how much pressure is being exerted by the central bank, given the difficulty of interpreting money supply figures. □

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

THE LOBBYISTS

Insurers Threaten To Push Their Views On Bank Legislation

Paul Equale

The powerful **Independent Insurance Agents of America** is threatening revenge on the **American Bankers Association**-for the its decision to lobby over a bill not directly germane to banking but potentially very damaging to the agents. That's a big no-no, according to IIAA's rule book on lobbying.

Insurers' have treasured the McCarran-Ferguson Act, an antitrust exemption largely protecting the industry from federal oversight, but the act is under attack in the House and Senate. The ABA has weighed in several times encouraging an end to the act.

In an interview Tuesday, IIAA vice president **Paul Equale** issued a mano-a-mano challenge to ABA. He said he had just gotten off the phone with the ABA's chief lobbyist, **Edward L. Yingling,** to complain about ABA efforts to repeal McCarran-Ferguson.

"The ABA lobbying is gratuitous, and I do not see their direct interest in repealing McCarran-Ferguson," Mr. Equale said. "Being the political cynics we are, we see it as banks' efforts to punish us for effective lobbying on the bank powers issue.

"I told Yingling the interesting thing about lighting a legislative backfire is that the winds can change and burn your own house down."

Mr. Yingling confirmed the conversation with Mr. Equale but said the ABA had been urging repeal of McCarran-Ferguson for years and there now appears to be legislative momentum.

The ABA lobbyist said that because banks now compete directly with the insurance industry on both sides of the balance sheet, it is perfectly appropriate for banks to push for federal oversight of the insurance industry.

One one hand, Mr. Yingling said, the insurance agents are arguing on the Hill that federal laws should not interfere with the states' governance of insurance activities. On the other hand, he said, the agents are lobbying for federal overrides of state laws letting banks into the insurance business. "They can't have it both ways."

Mr. Equale cited Mr. Yingling's June 11 letter to members of the House Judiciary subcommittee on economic and commercial law, which recently passed H.R. 1663 — a bill that would gut McCarran-Ferguson.

The IIAA said there may soon come a bill tough on banks — on mandatory cashing of government checks, for instance — and the insurance agents may push their position.

"We've never done it in the past, and we have been straight with the ABA," he said. But "if the ABA thought they had problems with us to date, if we have been pests, they ain't seen nothing yet."

The insurance agents also have taken it on the chin lately in decisions by the courts (for the Comptroller of the Currency) and the State of Delaware letting banks expand significantly into the insurance business.

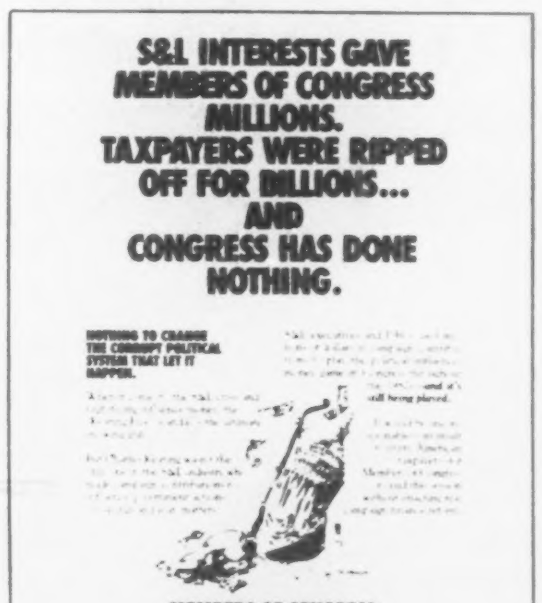
Common Cause Ad Attacks the Thrifts

Common Cause, the government watchdog organization, is running an ad in newspapers warning that the same political contributions game that produced the "Keating Five" scandal is still alive in Washington.



S&L INTERESTS GAVE MEMBERS OF CONGRESS MILLIONS. TAXPAYERS WERE RIPPED OFF FOR BILLIONS... AND CONGRESS HAS DONE NOTHING.

NOTHING TO CHANGE THE CORRUPT POLITICAL SYSTEM THAT LET IT HAPPEN.

MEMBERS OF CONGRESS:

COMMON CAUSE'S ad for reform of campaign financing.

The group is pushing Congress to limit the use of political action committees and some other techniques in financing political campaigns.

The ad points out that **Charles Keating,** though the most public of political contributors from the S&L industry, was not the only one. "S&L executives and PACs used millions of dollars in campaign contributions to play the political influence-money game in Congress throughout the 1980s — and it's still being played," the ad states.

* * *

Minority Bankers Fear Metzenbaum Bill

Most of the banking industry is alarmed at efforts by Sen. **Howard Metzenbaum,** D-Ohio, to push through legislation that could force banks and thrifts to offer new services to the poor. But lobbyist **Bruce Gamble** thinks members of his organization, the **National Bankers Association,** could be hit the hardest.

The trade group represents minority-owned institutions mostly located in the inner city, near the population most likely to need government check cashing and lifeline checking services.

"We operate on a small profit margin," Mr. Gamble said. "We cash government checks for a majority of our customers. But if we have to open up to all the people, and all the entitlement people come in, it could discourage our current customers."

Mr. Metzenbaum is expected to try this week to attach his legislation to a housing bill under consideration on the Senate floor. Mr. Gamble said his organization has tried to talk to the Ohio Democrat about the issue since last year, but with little success.

"He seemed pretty upset that we would not support him last year," Mr. Gamble said.

Consumer Credit, Led by Equity Loans, Is Growing Rapidly

Continued from *page* **12**

ing Citicorp's lead bank, Citibank, New York, as the nation's top bank consumer lender.

Overall, the nation's top 100 banks in consumer lending saw consumer outstandings grow 17.5%. But at Bank of America, Wells Fargo Bank, and Security Pacific National bank, consumer receivables grew 27.9%, 26.2%, and 26.4%, respectively.

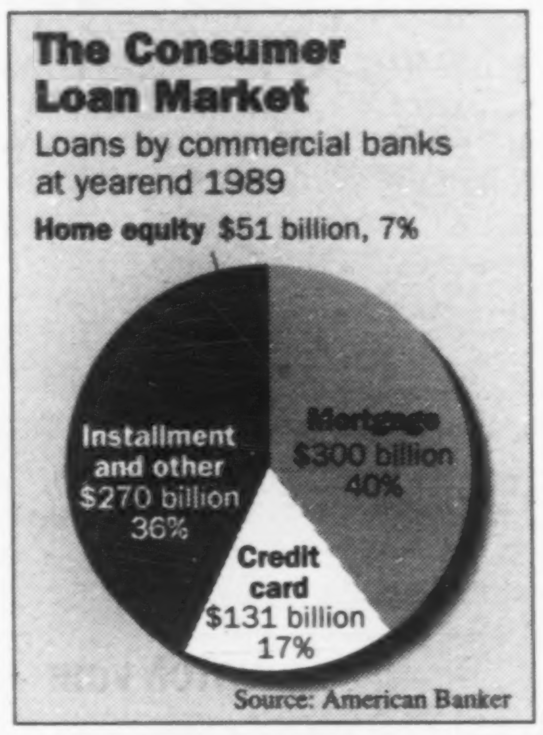
A Commonplace Emphasis

The emphasis on consumer loans was apparent at other major banks, too. At fifth-ranked Chase Manhattan Bank, for instance, consumer outstandings soared 40% in 1989. And retail loans continue to grab a bigger share of all lending activities at the nation's largest banks.Citicorp – still the premier banking company in consumer lending – saw five of its bank affiliates ranking among the top 50 in consumer loans. Overall growth, however, was comparatively slow at only 5.7% at these affiliates. Combined, these five banks had $48.3 billion in consumer loans, or 6.4% of consumer loans held by all banks.

At the top 100 banks, consumer loans as a percentage of total loans reached 46% in 1989, up from 44.5% a year earlier. At all FDIC-insured banks, consumer loans accounted for 36.5% of all lending activities, while business loans comprised only 30.1% of total loans, down from 31.1% a year earlier.

The Consumer Loan Market

Loans by commercial banks at yearend 1989



Source: American Banker

"More and more lenders are getting involved in consumer credit," said Gerald T. Flynn, chairman of the consumer credit division at the American Bankers Association. "It provides them with quicker liquidity, lets them charge higher rates, and allows for cross-selling." Mr. Flynn is a vice president in charge of indirect consumer lending at National Bank of Detroit.

A Sturdy Outlook

Even as talk of a possible recession and a downturn in consumer spending escalates, bankers and economists say the outlook for consumer debt is good.

"We expect total consumer loans to be steady this year because personal income continues to go up." said Stephanie Murphy, an economist with the CM&M Group Inc. in New York. But she said to expect a slight curtailment in home equity lending as the savings and loan bailout causes more property values to decline.

Cautious Approach Seen

At least one industry observer is bearish on the home equity market. Keith T. Gumbinger, of HSH Associates, Butler, N.J., said consumers were losing interest in home equity loans, largely because of continuing talk of a slowing economy. "I wish I could say things were rosy and millions of calls were coming in, but that's not the case," he said. "It's fairly slow out there."

HSH, a publisher of mortgage market information, talks to many lenders in 24 markets for each survey every three months. According to Mr. Gumbinger, no-fee and other pricing discounts are becoming harder to find in the home equity market, reflecting increased pressures on banks to improve their bottom lines.

Bankers agree that competitive deals can negatively impact the profitability of home equity loans. "Lenders have to be careful if they waive fees," Mr. Flynn said. "If consumers don't use the credit lines, banks can lose money."

Commercial Bank Loans to the Consumer

Data Source: Data are from the federal regulatory report of condition for all federally insured, domestically chartered U.S. commercial banks as reported by the Federal Deposit Insurance Corp., Washington, D.C. (1)— First broken out from total mortgage loans by the federal regulators in 1987. Home equity loans are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. (2)— Other mortgage loans are are loans secured by 1-4 family residential properties, including both first and second mortgages. Until 1987, home equity loans were included in the total. Since 1987, home equity loans have been excluded. (3)— The sum of home equity loans and other mortgage loans. (4)— Includes loans to individuals for household, family, and other personal expenditures and include single payment, instalment, and student loans. (5)— total loans and lease financing receivables net of unearned income but including the allowance for loan and lease losses and the allocated transfer risk reserve.

In addition, home equity loans of less than $15,000 are generally not believed to be profitable, while most banks have only a $5,000 or $10,000 floor limit on their home equity products.

But depending on a bank's technological sophistication, home equity loans should carry a return on assets of 1% to 2%, Shawmut's Mr. Grigley said. Shawmut – which operates in a region hit hard by real estate woes – increased its Boston bank's home equity portfolio 145% in 1989. While some of the growth was through portfolio acquisition, most of it reflected a major marketing effort, he said.

"Home equity is our No. 1 consumer lending product," Mr. Grigley said. Home equity lines of credit are also attractive to banks from a funding perspective. Under the new risk-based capital requirements, unused lines granted to consumers do not have to be reserved against, Mr. Grigley said. □

How they pay for it should be yours.

Data Sources: Data were provided by **W.C. Ferguson & Co.,** Irving, Tex. from **BankSource,** a data base of the Federal Regulatory report of condition (RC). Ferguson does not adjust the 1988 data for mergers occurring in 1989. Some of the large changes may be attributable to mergers. **Total Consumer Loans** are the sum of 1-4 family mortgage loans, home equity loans, credit card loans, and other consumer loans). **1-4 Family Mortgage loans** are loans secured by 1-4 family residential properties. First and second mortgage loans are included, but home equity loans are excluded. (Schedule RC-C, Column B-Domestic Offices, item 1.c.(2).) **Home equity loans** are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. (Schedule RC-C, Column B, item 1.c.(1).) **All other consumer loans** are loans to individuals for hosehold, family, and other personal expenditures. Included in this catergory are credit card loans and other consumer loans. **Credit card loans** include all extentions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. (Schedule RC-C, Column A-Consolidated Bank, item 6a.) **Other consumer loans** include single payment, instalment, and student loans. (Schedule RC-C, Column A, item 6b.) **Consumer loans % of total loans** is the ratio of total consumer loans to total loans. **Total loans** are Loans and leases, net of unearned income. (RC-Balance Sheet, item 4.a.) **(‡)**— The 1988 totals are for the top 100 banks in 1989. **(1)**— An unweighted average derived by summing the individual ratios for each bank in the top 100.

Pressure Mounts To Allow Banks Free Branching

By ROBERT TRIGAUX

WASHINGTON — Claiming that the U.S. banking industry is overly fragmented and losing ground to international competitors, a powerful coalition of federal regulators, legislators, influential consultants, and some large banks is renewing the call to allow U.S. banks to branch nationwide.

The drive favoring larger U.S. banks with extensive branch networks is being engineered by top Federal Reserve Board officials and key members of Congress, among others.

Their moves pose the latest challenge to states that want to preserve their historical right under the McFadden Act to control banking activities within their borders.

ANALYSIS: *Follow-up on the news*

The latest strike for nationwide banking is legislation to be introduced this week by Sen. Christopher Dodd, D-Conn., and Rep. Charles Schumer, D-N.Y.

Greenspan Backs Move

At a hearing last Thursday, Federal Reserve Board Chairman Alan Greenspan asked Sen. Dodd if this legislation would mean an end to the McFadden Act. Told that it would, Mr. Greenspan responded, "No question, it would be highly desirable."

The McFadden law, enacted in 1927, allows national banks to open branches in a given state only to the extent allowed state-chartered banks. It thus gives state governments the final word on branch authority for all banks regardless of charter, and broadly prohibits banks from opening deposit-taking offices across state borders.

Branching Laws Varied

By way of reciprocal interstate banking laws that many states enacted during the 1980s, bank holding companies can buy or establish a separate institution in each state they enter. In most cases, entry into each new state requires the expense and bureaucracy of an independent management and a new board of directors.

A majority of states permit some form of interstate banking. About 30 allow statewide branching, 13 others have restricted branching laws, and a handful still operate as unit banking states with very limited or no branching.

Federal Reserve Board Governor John LaWare thinks the McFadden Act has contributed

Older Baby Boomers' Unease Called Bankers' Opportunity

By ELLEN MEMMELAAR

NEW YORK — An unusual degree of financial uneasiness makes older members of the baby-boom generation a potentially lucrative marketing target for astute bankers, researchers and bank marketers say.

These baby boomers, 35 to 44 years old, see themselves in a three-way bind – having to support children, aging parents, and their own retirement plans – that calls for sophisticated financial planning.

Targeting the older baby boomers is being pushed by the International Association for Financial Planning, an Atlanta-based trade group, and a few banks are taking it to heart.

Special Attention

While the banks have long viewed the 70 million people born from 1946 to 1964 as a key marketing opportunity, the older half of that generation is beginning to attract special attention.

For example, U.S. Bank, the lead subsidiary of U.S. Bancorp., Portland, Ore., recently acquired a financial planning company. The bank has an eye toward attracting baby boomers who are in their prime income- and wealth-creating years but lack confidence in their ability to manage money and meet family financial demands.

"There are many things that banks can do for this segment of

Bush Orders New Steps To Combat S&L Crimes

By DEBRA COPE

WASHINGTON — Facing increasing political heat over his administration's handling of the savings industry crisis, President Bush announced several initiatives Friday to crack down on fraud and other criminal activity related to thrift failures.

His moves included creation of a federal strike force to catch criminal activity at financial institutions before it gets out of hand, and endorsement of proposals by Republic legislators to beef up enforcement tools and boost funds available for probing management abuses.

He also appointed James G. Richmond Jr., U.S. attorney for the northern district of Indiana since 1985, as special prosecutor to coordinate federal enforcement of thrift-related crimes.

"We will not rest until the cheats, the chiselers, and the charlatans spend a large chunk

Bankers Expect To Kill Bill on Check Cashing

By ROBERT M. GARSSON

WASHINGTON — After months of skirmishing, bankers are confident that they will defeat a bill this week that would require them to cash government checks for customers and noncustomers alike.

A decisive Senate vote on the bill could come on Tuesday, according to industry sources.

Banking lobbyists have adamantly opposed the measure since its sponsor, Sen. Howard Metzenbaum, began pushing it in 1987. That year, the Ohio Democrat was able to insert a similar provision – without a vote – into the Senate version of the Competitive Equality Banking Act. It was dropped from the final bill during conference negotiations with the House.

First Big Test

Now the requirement that banks and thrifts routinely cash most government checks faces its first high-stakes vote on the Senate floor. The banking industry, increasingly confident of victory, rejected attempts to reach a behind-the-scenes compromise this year.

If the industry prevails on the Senate floor, it may be able to

First Interstate's Vulnerability Livens Speculation in the Stock

By GORDON MATTHEWS

NEW YORK — With so many troubled thrifts for sale at bargain prices, the bank takeover market is relatively dormant these days. But that's not stopping speculators from keeping alive talk of a bid for First Interstate Bancorp.

The latest flurry of takeover talk began after First Interstate's depressed stock rocketed 12% on June 4. That, combined with earlier informal expressions of interest from Wells Fargo & Co. and Security Pacific Corp., has kept the rumors alive and given bank securities analysts the almost impossible task of trying to figure out when and if a merger bid might surface.

Big Repercussions

If such a blockbuster occurred, it would permanently alter the landscape of American banking in a way that few other

COMMENT/*By Paul S. Nadler*

CoreStates May Be Pulling A 'Whitewash' on Holders

Somebody at CoreStates Financial Corp. must have been deeply influenced by Mark Twain because that Philadelphia-based bank corporation recently offered its shareholders a deal that can only be compared to Tom Sawyer's being paid by his friends for the chance to do his chore of whitewashing the fence.

CoreStates is offering its shareholders the chance to join its dividend reinvestment program on the following revised basis: They can have dividends reinvested in CoreStates stock directly, and they can add optional amounts.

No Concessions Offered

Well, lots of banks offer this. What makes CoreStates' offer special?

- There is no discount from market price.
- Investors share in the full cost of brokerage.
- They also pay a fee of 4% of the funds invested (to a maximum of $2.50 per transaction).
- If they send in optional funds, they earn no interest until the date of the quarterly sweep and investment.

What a deal! For the shareholder? No. For CoreStates.

Market makers in bank shares report that when a bank has a reinvestment plan, dealers are willing to hold larger positions in the stock and thus give it greater liquidity. They see "light at the end of the tunnel."

Guaranteed Demand

By this is meant that dealers are less likely to be caught with positions they cannot liquidate because, every quarter, the stock is in demand as the dividend reinvestment funds are put to work. And banks with reinvestment programs usually have a broader market for their shares because of the greater willingness of market makers to stand up and take positions.

When banks need new capital, dividend reinvestment programs have the added value of offering a way to divert dividend payments into investment in newly issued stock – thus building the bank's capital base. Some bank corporations have offered discounts of as much as 5% to shareholders who buy stock with their dividends. This incentive has worked well, bankers report.

But the key is that banks really need an incentive to get shareholders to reinvest. To the stockholder, a dividend reinvestment program is really somewhat of a pain. Look at it:

- You get no cash dividend.
- You get a 1099 form anyway, so you have to take other money and pay tax on the dividends you didn't directly get.
- You have the crazy job of keeping records on how much you reinvested each year so that, when you sell the stock, you can adjust the cost basis accordingly.

Transaction Usually Cost-Free

Sure, in most instances, even when there is no discount, the shareholder gets a chance to reinvest with no fee and with the brokerage commission paid by the bank. This is little enough compensation for the effort, if there is no discount on the shares.

But CoreStates charges for the commission and levies a service fee, too. All it offers is the chance to combine your commission cost with that of the others reinvesting their dividends to gain the advantages of a large-scale transaction.

To this observer, it would seem that CoreStates would be better off not offering a reinvestment program, if it is considering the best interests of its shareholders and not just its own.

Policies that look at actions from the viewpoint of the bank alone have a way of backfiring.

The Demand-Deposit Dodge

Many bankers remember when some depositors held large deposits in demand-deposit form, earning no interest. The bank benefited, and many officers felt: "Why rock the boat? If they are happy, why tell them they could be earning interest on their funds?"

But when someone else – often another bank – finally told them what they were losing, the depositors got angry and, frequently, instead of just shifting the funds to interest-bearing form, pulled the whole account.

Similarly, stores that honor discounts only when they are demanded find that the passive shoppers, who paid the initial price presented without knowing they could bargain, get angry when they learn the truth. These shoppers often take their business elsewhere. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

Last month, ailing American Bank & Trust Co. of New Orleans renamed itself Alerion Bank in hopes of revitalizing its image. The move renewed a discussion among bankers and consultants over the merits of name changes.

Some maintain that generic bank names, such as those beginning with "American" or "Federal," or names that refer to a particular city or state, which might hamstring a bank's interregional expansion plans, often *need* to be changed. Others, however, bemoaning what *The Wall Street Journal* recently referred to as "Klingonlike" names, fear that poorly chosen names might help to create a negative image for banks in general.

To gauge sentiment in the banking community about name-change programs, the *American Banker's* Chicago bureau chief, Nanine Alexander, asked:

Q *What effect does a bank's name have on its own image and that of the financial services industry?*

Edward B. Brandon

Chairman/CEO

National City Corp.

Cleveland

You create marketing and image problems when you start out with a name no one has ever pronounced. I think some name changes are rather ridiculous.

It takes your customers a year to figure out how to say the new name and another year to figure out what it means.

I think that many name changes are a rather humorous endeavor on the part of marketing consultants. If we were to change the name of National City Corp., I would be inclined to choose a name that calls to mind the banking industry.

Maura Connolly

Retail marketing manager

Fifth Third Bancorp

Cincinnati

There is a benefit to having a unique name. What we found was that the uniqueness of our name stood out as we expanded; we didn't run into other banks with the same name when we went into a new market.

I think what you have to do is weigh the cost versus the benefit with an unusual name. Also, I don't know if an unusual name translates into comfort for a bank's customers.

Chris Mahai

Senior vice president

Corporate relations

First Bank System Inc.

Minneapolis

In the case of mergers and acquisitions, name changes are understandable. You want to start with something new and different.

There are so many common names, with a new, unique name a bank can stand out. But it's hard to establish equity and value in a new name. And a name change takes a large financial investment: In the early '80s, all our units had different names, but we renamed them First Bank System. It was an expensive undertaking.

Then there's the capital expenditure: You have to redo the bank's signs and all your forms and letterhead. And you have to have an ad campaign to reinforce the name.

In short, I think you must have a pretty good reason to do it.

C. Paul Johnson

Chairman/CEO

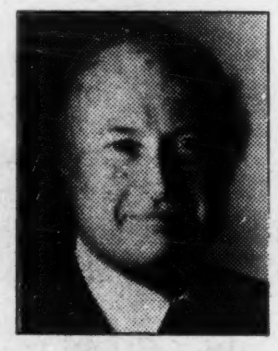
First Colonial Bankshares Corp.

Chicago

I have a problem with fancy, cute, or clever names. I think they detract from the industry.

If First Colonial bought a bank with such a name, we would have a tendency to change the name to something more acceptable to public taste.

I knew of a guy, used to be a Chicago banker, who started a bank out in Aspen [Colo.] and named it the Piggy Bank.



I don't think that's smart. A name like that wouldn't develop confidence in the bank.

Larry D. Bayliss

Senior vice president

Marketing and advertising

Boatmen's Bankshares Inc.

St. Louis

If you don't know the psychology or thought process behind a specific name change, judging the merits of a financial organization's choice becomes subjective.

For instance, let's say company A is developing a name that is obtrusive in the marketplace and is appealing to consumers, while company B is concerned with a name that is considered attractive by shareholders and financial analysts.

Because of the distinct thought processes involved, chances are the names selected will be 180 degrees apart. And because each name has its own group of supporters, both are appropriate.

But names aren't a substitute for high performance: In the end, no matter what the name, that's what counts. ☐

COMMUNITY RELATIONS

Financier of Developments Also Does the Construction

By PHIL ROOSEVELT

Shorebank Corp. of Chicago doesn't just finance community development – it also does a lot of the work.

City Lands Corp., a real estate development subsidiary of Shorebank, has constructed about 1,300 units of low- and moderate-income housing units since it was formed in 1978.

Such development subsidiaries are "becoming more prevalent, but they are not yet common," said Janet Gordon, associate director of community development for the Office of the Comptroller of the Currency. Among the banking companies to embrace the concept are Continental Illinois Corp., Chicago, and NCNB Corp., Charlotte N.C.

Fit Seems Appropriate

A development company seems a natural fit for Shorebank, whose banking unit – the $180 million-asset South Shore Bank – focuses on community development. City Lands says it earns profits by selling the tax credits it receives to investment funds and by managing its properties.

"If you're just a lender, you're distanced from the actual production," says Thomas Moss, president of City Lands. "When you have people from the bank involved in the work, it gives you a better understanding of the credit needs and other issues in the community where you work."

> **"If you're just a lender, you're distanced from the actual production."**
>
> **Thomas Moss**
> *City Lands*

While City Lands has concentrated on multifamily housing, it recently celebrated the opening of Jeffery Plaza, a $10 million shopping center in Chicago's South Shore community, a low- and middle-income, largely black neighborhood.

The plaza was developed over eight years with South Shore Bank, the City of Chicago, community leaders, and private developers.

Mr. Moss said the project should enhance the value of Shorebank's residential developments in the area. So far, the plaza has an anchor tenant – Dominick's Finer Foods – and 12 of 23 smaller stores have been leased.

Buying Power Questioned

Mr. Moss said he is pleased with the pace but acknowledges that some potential tenants question the buying power of the local residents.

"There are some retailers that just haven't worked in black neighborhoods, and they have some difficulty with the idea," he said.

He sees opportunity in the dearth of retailers near Jeffery Plaza. "Think about the penetration you could get around here," he said. "You could get all the business."

Because the plaza required a good deal of time to develop, "a lot of banks would have dumped it," said John Long, who led one of the community groups that worked on the development. Shorebank's officials "are not foolish," he added, "but they tend to be more patient than other people."

A Summer Sale on Mortgages

For a limited time this summer, First Union National Bank is cutting 75 basis points off the loan rate in its mortgage program for low- and middle-income families.

The rate has declined to 9.75% from 10.5% at First Union National Bank offices in Georgia, North Carolina, South Carolina, and Tennessee.

"The Affordable Home Mortgage Loan program is one part of our ongoing effort to meet the needs of low- and moderate-income residents of the communities we serve," said Barbara K. Massa, First Union Corp. senior vice president and director of community reinvestment.

"We're happy to make this product more affordable – and housing more accessible – for our customers."

Limit on Income of Borrowers

The Charlotte, N.C.-based bank introduced the loan program in December. Loans are available in minimum amounts of $10,000. Borrowers may put as little as 5% down, and terms extend up to 30 years.

To qualify, the borrower's family income must be no more than 20% of the median in their county.

The down payment may include gifts, may be financed (if included in the debt-to-income ratio), or in some cases may even include sweat equity – work performed by the owner that adds value to the property.

The origination fee charged by First Union is 1% of the loan amount. ☐

Banks See Older Baby Boomers As Hungry for Financial Planning

Continued from *page* **1**

the population to get them out of the triple-squeeze position," said Muriel Van Housen, executive vice president of Sheppard & Associates, the U.S. Bancorp. subsidiary. "Clearly, there is a need for it. If these people are served now, they will be longtime customers of the bank."

The financial planning trade group said that baby boomers are gearing up for future expenses by saving or preparing to save at higher rates than ever before. That can mean more business for banks, it said.

Forced Savings Products

Some are creating so-called forced savings products, in which consumers have a fixed amount of money transferred periodically into an account.

> **Eighty-four percent said caring for aging parents would cut into their leisure time, and 82% felt that their financial security would be affected.**

Marine Midland Bank, a subsidiary of the Hongkong and Shanghai Banking Corp., introduced its Marine Gain package last year, including an automatic savings account, a short-term certificate of deposit that allows $250 additions, and a long-term, high-yielding certificate.

The product is "for very goal-oriented savers," said Cynthia Grochoqina, product manager for savings, CDs, and IRAs at the Buffalo-based bank.

Savings Gets More Stress

In a national survey commissioned by the financial planning association, 75% of 35- to 44-year-olds are already saving or likely to be saving more than they had previously. This compares with 65% of the overall population that has the same savings goal.

The statistics came from a Gallup Organization survey in April of 1,058 households, including 268 in the 35-44 age group. Gallup did more detailed interviews with 400 other people with incomes of more than $50,000.

Many boomers who are seeking help investing their savings for maximum return are turning to financial planners, said the trade group. Banks seeking to capture a larger percentage of this market should offer financial planning services, said Mark Tibergien, treasurer of the IAFP.

Shifts in Personal Finance

Baby boomers faced by those three critical expenses are shifting their finances in different ways, said Mr. Tibergien.

First, individuals are setting priorities for themselves and their dollars. The study found that 59% of the aging boomers worry about their ability to meet all of their financial responsibilities, compared with 46% of the general population that feel the same way.

The boomers acutely feel the need to compromise certain aspects of their lifestyles to make room for the coming expenses. Eighty-four percent said caring for aging parents would cut into their leisure time, and 82% felt that their financial security would be affected. Sixty-nine percent are worried that their standard of living will go down, and 61% are concerned about their ability to save for retirement.

Many Retiring Debt

Many boomers are taking steps to retire debt, said Mr. Tibergien. By reducing their loans outstanding, including credit card, auto, and mortgage, the boomers feel that they are freeing money for other uses.

Yet many boomers are missing the boat, he said. While paying off debt is important, this group should also be encouraged to begin long-term savings programs. Bankers could stress the value of individual retirement accounts and other tax-deferred plans and annuities to this group.

Bankers could also play a role in overcoming the generation's financial pessimism. The IAFP study said 86% of Americans believe that serious inflation is around the corner and 69% think a deep recession is near.

Lack of Planning Blamed

"It's clear that much of this fear grows out of a failure to come to grips with these issues and to do financial planning," said Robert Hewitt, chairman of the IAFP. "A good financial plan will structure savings and investments to successfully weather inflation and recession."

> **"It's clear that much of [Americans' economic] fear grows out of a failure to come to grips with these issues and to do financial planning."**
>
> **Robert Hewitt**
> *International Association for Financial Planning*

People with incomes of more than $100,000 or savings of $1 million are the client base of Sheppard & Associates, and a significant portion of the baby-boom generation fits those categories, said Ms. Van Housen. Clients pay fees on a per-hour basis.

Most U.S. banks have not chosen financial planning as a means to capture baby boomers, she said. Many institutions offer financial planning only to very wealthy people through their private banking operations. ☐

Outsourcing Poses Dilemma For Strategists

By KAREN GULLO

NEW YORK — Hoping to cut technology costs while staying on the leading edge of automation, many banks are considering hiring an outside company to run their technology operations. But bankers and analysts say the decision is less clear-cut for larger banks than for smaller ones.

For many years, small to midsize banks have turned to outsourcing, the term for farming out all or part of the data processing operation. Now chief executives at larger banks are sitting up and taking notice, prompted by reports that large corporations are signing outsourcing contracts that promise savings of 40%.

ANALYSIS: *Follow-up on the news*

Determining whether outsourcing is the answer to containing ever-growing technology costs has sparked internal debate at some institutions. Sources said such a dispute recently led to the abrupt departure of the top technology chief at First Fidelity Bancorp, Newark, N.J.

Pitfalls Seen

Gary A. Provo, executive vice president at First Fidelity, opposed an outsourcing proposal backed by top managers, including chairman Anthony P. Terracciano, sources said. Mr. Provo reportedly believed that outsourcing could ultimately cost the bank more than continuing to run its $100 million data center in-house.

No banking company as large as the $30 billion-asset First Fidelity has signed an outsourcing contract.

Sometimes There Is Consensus

Bankers and analysts generally agree that outsourcing makes sense for small and medium-size banks that either cannot afford to fund their own technology units or cannot keep pace with new, complex technology projects such as consolidating data centers or creating integrated banking systems. But larger banks may be better off keeping technology in-house, some say.

Although outsourcing is a fast way to bring down the costs of a technology operation, the bank turns over control of a strategic unit to an outsider and may lose a competitive edge.

In addition, a large bank may be able to realize the cost saving without going through an outsourcer.

"It's very true that there are

FDIC Liable In 12 Texas Bank Failures

By STEVE KLINKERMAN

DALLAS — A federal judge has ruled that the Federal Deposit Insurance Corp., in trying to limit its cost of rescuing 12 insolvent Texas banks last year, illegally provoked the failure of a dozen healthy affiliates.

If upheld and extended to similar cases, the decision leaves the agency facing a potential liability of more than $500 million, lawyers say.

Sold to Investor Group

The ruling by U.S. District Judge Robert Sanders on Monday involved Texas American Bancshares Inc., a Fort Worth-based company now in bankruptcy proceedings. All 24 of the company's banks were declared

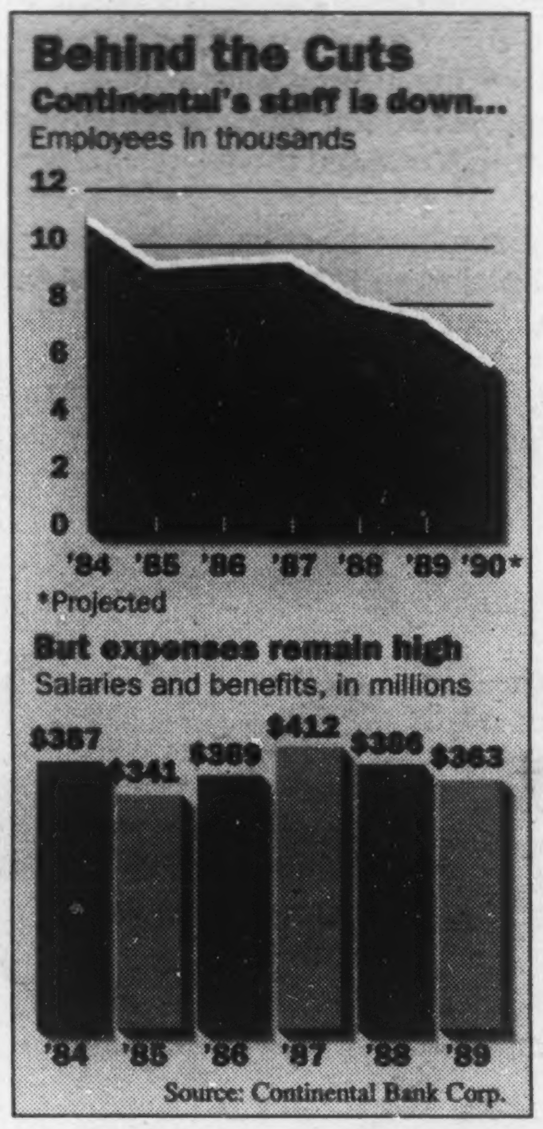
Continental to Lay Off 900, Take $50 Million Chargeoff



Source: Continental Bank Corp.

By NANINE ALEXANDER

CHICAGO — Continental Bank Corp. became the latest money-center bank to announce a significant staff reduction, saying on Tuesday it would drop 900 employees – 13% of its total – after completing a broad reassessment of its product lines.

The $29 billion-asset company said it would take a $50 million pretax charge for the restructuring, leading to an unspecified loss for the second quarter. Analysts estimated that the deficit would be from $20 million to as much as $50 million, against earnings of $64.1 million in the 1989 second quarter.

Shares of Continental closed at $15.375 Tuesday, down 62.5 cents.

Some Key Areas Affected

Among the areas likely to feel the effects of the cutbacks are global trading and corporate finance, according to spokesman William C. Murschel. Certain product lines, including exchange-traded futures and options, will be eliminated.

The cuts and the expected sale of its 700-employee First Options Corp. subsidiary would bring Continental's work force below 6,000. That would be barely half the 10,900 that the Chicago-based company employed in 1984 when it required a Federal Deposit Insurance Corp. rescue package to overcome bad loans to the oil industry.

The announcement came one day after Chase Manhattan Corp. said it planned to reduce its operating costs by $300 million a year through elimination

KKR to Withdraw $582 Million In Its RJR Nabisco Refinancing

By STEVEN LIPIN

Even as Kohlberg Kravis Roberts & Co. invests an additional $1.7 billion in RJR Nabisco Inc., the leveraged-buyout firm is looking to withdraw $500 million as well as accrued interest in short-term debt it had previously invested in RJR, according to banking sources.

But banks funding a new $2.25 billion financing package resisted approving a quick redemption of the $500 million in notes; they will allow KKR to redeem the notes only after RJR exceeds budget projections by a certain amount and after all amortization schedules are met, the sources added.

$582 Million at Stake

With accrued interest that has been paid with additional securities, the amount to be redeemed equals $582 million.

KKR, which declined to comment, invested $1.8 billion in equity and $500 million in a subordinated bridge loan as part of its $25 billion buyout of RJR.

FDIC Anxiously Awaits Arrival of a Fed Loyalist

Washington Bureau

WASHINGTON — At the Federal Deposit Insurance Corp., they're hiding copies of *Mandate for Change.*

The 1987 publication, which outlined the agency's ideas for restructuring the financial services industry, called for dismantling the law that empowers the Federal Reserve to regulate banks.

22 Years with the Other Agency.

But now the FDIC faces the likelihood that its next chairman will be a 22-year Fed veteran, William Taylor.

"We don't want to be associated with that book once Taylor gets here," one FDIC staffer said recently.

The staffer was joking, of course, but the quip reflects the deep rivalry that exists between the Fed and the FDIC. It also hints at the mixed feelings some FDIC officials have about Mr. Taylor's expected arrival. On the one hand, Mr.

Bank of New England Lured Wheeler from a Happy Spot

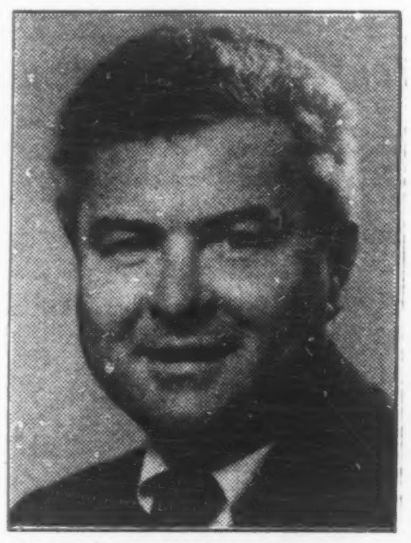
By TOM LEANDER

When Lawrence K. Fish, chairman of the Bank of New England, phoned D. Bruce Wheeler last month and offered him a job as president of the ailing company's flagship subsidiary, the timing couldn't have been worse.

"I'd never been happier at my job, never been happier about where I lived," Mr. Wheeler recalls. "The timing was awful."

Six months earlier, he had become head of the banking division of First Nationwide Bank, the San Francisco-based thrift subsidiary of Ford Motor Co.

But last week, after some diplomatic arm-twisting, he decided to join the team Mr. Fish's has hand-picked to turn around one of the nation's most troubled banking companies.



D. Bruce Wheeler

Mr. Wheeler, 43, is replacing Leo R. Breitman, who steps into the newly created post of senior credit policy officer.

Mr. Wheeler said he accepted the job only after careful study of Mr. Fish's plan to restructure the company. Eventually, he came to see the turnaround plan as "aggressive, definitely do-able."

Mr. Wheeler's job is to convert the lead subsidiary, Boston-based Bank of New England NA, from its focus on commercial real estate and business lending to retail banking and middle market lending. The bank is currently operating under a regulatory restriction known as a cease-and-desist order.

The parent company began its dizzying fall in late 1989 and posted a $1.1 billion loss for the year, followed by a $46 million loss in the first quarter.

Since Mr. Fish stepped in as chairman in March, he has assembled an eclectic squad to revive the ailing institution. Among them is R.T. McNamar, a former deputy Treasury secretary, who is vice chairman and head of investor relations; and Kent Price, the former head of Citicorp's United Kingdom operations, as chief financial officer.

Mr. Wheeler, too, is an eclectic banker. He found his way into banking after a long fling with academia – he earned a bachelor's degree in social anthropology at Harvard and a master's in history at the University of Chicago – and he taught high school for three years in Chicago.

Then he joined First Chicago Corp. and enrolled in its First Scholars program, studying at the University of Chicago for two years at night while he worked in a rotational management training program by day.

After he earned the degree, he joined First Chicago's international unit in Edinburgh, and then went to London to ply his trade at a correspondent bank.

Next, Crocker National Bank tapped him, and he moved to Thailand, then to San Francisco, where he met his wife, Dale.

In 1982, Mr. Wheeler joined Bank of Boston, where he became the head of its Massachusetts banking operations.

It was at Bank of Boston that he met Mr. Fish, then head of the bank's New England division. The pair had a hand in company's restructuring into five divisions in 1985.

"We dissected the company, divided the company," Mr. Wheeler recalls, "and redid the management reporting system. We turned it into a return-on-equity driven bank." □

NEWS *briefs*

Citibank, MCI to Use Visa as Calling Card

NEW YORK — Citibank, the largest issuer of bank credit cards, is allowing its customers' Visa cards to be used as calling cards on MCI Communications Corp.'s long-distance network. The offer comes three months after AT&T launched the Universal Card, a general-purpose credit and calling card.

Citibank's 14.6 million Visa customers will be charged long-distance rates 22% less than AT&T's standard calling card tariffs when they use MCI, the bank said. The AT&T Universal card offers a 10% discount on long-distance calling-card rates.

The program is being offered under VisaPhone, an initiative launched by Visa International and MCI last year. Citibank expects to extend the service soon to MasterCard customers.

Panama Seeks Aid from Western Governments

LONDON — Panama is seeking $540 million in aid from Western governments to pay its debt arrears to international financial institutions, Vice President Ricardo Arias Calderon said in a telephone interview.

Mr. Arias, touring Europe to encourage economic cooperation with Panama and to seek financial aid, said, "I think it is very important that we transmit the new political situation. . .that the emerging functional democracy is past its worst political crisis."

Panama wants aid to cover its arrears. — **Reuters**

Consumerists Call Bank Fees High

By LOUIS GERHARDSTEIN

Checking Account Fees Differ by Region

States ranked by monthly fees for basic checking

Expensive

	Average fee per month	Per check
Kansas	$7.29	NA
New Jersey	6.56	NA
Virginia	6.07	NA
Arizona	5.56	35¢
California	5.22	32¢

Inexpensive

	Average fee per month	Per check
North Carolina	$3.17	30¢
Rhode Island	3.30	40¢
Ohio	3.50	25¢
Michigan	3.77	40¢
Wisconsin	4.72	35¢

Source: Consumer Federation of America survey of 16 states

WASHINGTON — Climbing consumer bank fees coupled with a bewildering menu of services and pricing options continue to deprive low- and moderate-income people of banking services, a consumer advocacy group asserted Tuesday.

Citing its sixth annual survey of banking services, the Consumer Federation of America put the annual cost of an average noninterest-bearing checking account at $107.98 and the average interest-bearing NOW account at $111.39.

Since 1983, the federation said, costs for NOW accounts have risen 62.3% and regular checking accounts have risen 28%. Over the same period, the survey said, interest rates earned on NOW accounts have remained at around 5%.

The consumer group's legislative representative, Peggy Miller, said low- and moderate-income depositors who cannot maintain minimum balances are being squeezed out of the market.

"What we're seeing here is about one-half of all consumers face fees one way or another," Ms. Miller said. She added that the competition that has resulted from deregulation has benefited only the more affluent consumer with enough money to invest in higher-yielding products such as certificates of deposit.

The American Bankers Association challenged the Consumer Federation's findings as "unreasonable," and cited its own study that 59% of banks in 1989 offered basic banking services with low or nonexistent minimum balance requirements and no per-item fees for at least a limited number of checks.

The Consumer Federation study "is by no means representative of the banks out there," an ABA spokeswoman said Tuesday. "In some markets, you'll have to shop hard, but overall those [basic banking] choices are available."

Defends Bounced-Check Fees

The ABA also criticized CFA for including in its yearly checking account costs the price charged for two bounced checks, which would average $30 at the 170 institutions in 16 states monitored by the consumer group. Bad checks "should be the exception, not the norm," the ABA spokeswoman said.

Trump's Banks Seal Credit Pact With a $20 Million Bridge Loan

By WILLIAM GOODWIN

Donald Trump's bankers agreed Tuesday to a $65 million credit pact for the troubled developer.

As part of the agreement, the banks gave Mr. Trump a $20 million bridge loan, pending completion of documentation on the broader credit pact, which also includes deferral of interest payments on some of Mr. Trump's existing $2 billion of bank debt.

The $20 million bridge loan was funded at 4 p.m. Tuesday, according to a spokeswoman for Citibank, one of Mr. Trump's principal banks. She said the bridge loan was funded after the entire Trump bank group agreed to the underlying credit pact. The bridge loan will be repaid out of the $65 million.

However, it remained unclear whether Dresdner Bank, one of the last holdouts, had signed on to the deal.

A banking source said earlier in the day that the pact could be concluded without Dresdner. At the same time, this source said Dresdner's loan portion hadn't been bought out by other banks.

The $20 million bridge loan was needed after it became clear that the banks were not going to agree on the broader credit pact in time for Mr. Trump to make overdue interest payments on the casino bonds.

Tuesday was the deadline for curing the default. □

COMMENT/*By Irvine Sprague*

FDIC Must Ask Fair Price For Its Stake in Continental

WASHINGTON — Continental Illinois is again in the news because public ownership of a control block of stock is in dispute. Gratitude and greed are the two words that come to mind as we recall the unprecedented bailout of the colossus of the Midwest. Unfortunately, greed is the dominant word.

Recently, Tom Theobald, chairman of Continental Bank, as it is now called, told *The Wall Street Journal* that he was "dumbfounded" that the FDIC had passed up "two legitimate opportunities" to sell its interest in Continental.

What bugged Theobald was that the FDIC board turned down his request for a sweetheart deal. Theobald's group offered to pay just over $15 a share on a day the stock was trading for $17.

The FDIC currently holds 26.3% of the Continental stock, a control block that should bring a premium, not a discount.

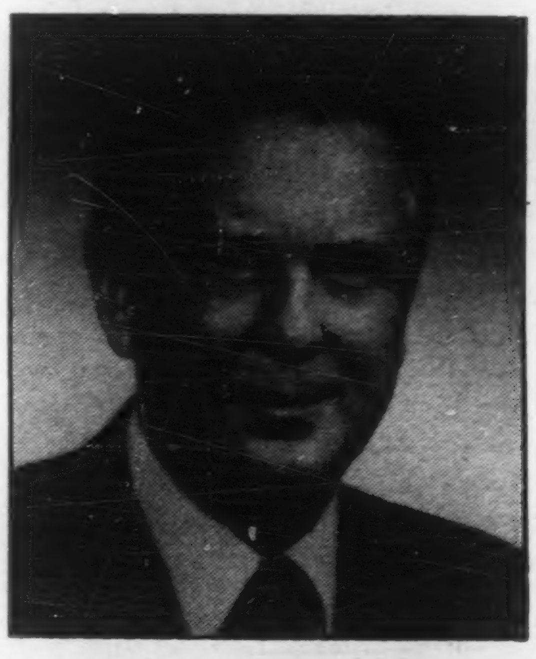
Played Role in Bailout

This was not the first time that Theobald was dumbfounded in dealing with the FDIC over Continental, and it probably will not be the last.

Remember, it was Theobald, then at Citibank, who delayed the Continental bailout in 1984, in a futile attempt to ensure that Citibank could suffer no loss but at the same time would get public credit for assisting in the rescue.

Theobald's argument, like that of some of the people at the Fed today, is that public ownership of Continental should not be continued by a regulator. I agree – but, heaven forbid, not at the expense of giving a donation to an investor group.

The FDIC engaged the Wall Street firm of Smith Barney, Harris Upham & Co. to advise on the disposition of the stock. After a presentation by the firm, the FDIC board unanimously turned down the three-way deal offered by Theobald and other Continental executives, the bank itself, and a group of well-heeled outside investors.



"The FDIC currently holds 26.3% of the Continental stock, a control block that should bring a premium, not a discount."

Then the FDIC announced that it is committed "to realizing full value for its holdings and will explore all options for divesting its ownership in the company."

Divestiture Is Timely

Actually, the divestiture is right on schedule. Let's turn back the clock.

In 1984, when Continental failed, the bank was nationalized so that it could keep its doors open. The FDIC led a rescue that totaled over $14 billion and included cash from the FDIC, enthusiastic support and advances from the Fed, and a commitment for safety-net loans by most of the nation's largest banks. When the books are finally balanced, they are expected to show a $1.5 billion loss, all charged to the FDIC.

The Continental plan was patterned after the successful First Pennsylvania bailout four years earlier. We pledged financial support through a public statement that we would not allow the bank to close its doors. Stockholders would lose, but all depositors and creditors would be made whole.

During tense negotiations that May, the bankers all agreed, except Citibank. Finally, Bill Isaac and I decided to ignore the banks. We held a stand-up board meeting in our New York office, appropriated $2 billion, told the press the bank was saved, and left for Washington. Todd Conover provided the third vote for a unanimous decision.

Stalemate Is Broken

We left the bankers just sitting there. After we left, Fed Chairman Paul Volcker called Theobald's boss at the time, Citicorp's Walter Wriston, in San Francisco, and the stalemate

Mr. Sprague served as chairman or director of the Federal Deposit Insurance Corp. for more than 11 years, during which time he handled 374 bank failures. He is the author of the book "Bailout: An Insider's Account of Bank Failures and Rescues" and frequently speaks before banking groups.

GRAPEVINE/*By Jed Horowitz*

Still Fishing. Though Banks of Iowa lost its oldest suitor when Minnesota's First Banks System called off a long-planned acquisition last week, others are waiting in line.

"I think I could name four or five parties that are seriously interested, including other bank holding companies within the Iowa [interstate] region," said Holmes Foster, chairman of $2.6 billion-asset Banks of Iowa. He quickly added that no direct offers have been made, though a well-placed source said "direct conversations" have occurred.

Several sources said Boatmen's Bancshares of St. Louis is a likely bidder, despite its recent digestion of its crosstown rival, Centerre Bancorp. They also speculated that at least one of Wisconsin's two largest companies — Marshall & Ilsley Corp. and Firststar Corp. — may be interested. The three banks are among the few within Iowa's interstate region large enough to acquire Banks of Iowa, Mr. Foster acknowledged. He added that some private investors also might be interested.

Officials at the banks would not comment.

Des Moines-based Banks of Iowa is unlikely to receive a cash offer, particularly one as attractive as the deal with First Bank, which dropped out because of capital constraints, Mr. Foster said. But "it's within the realm of possiblity that we can do a stock exchange on a book-and-a-half basis, which could be even a better deal because of tax ramifications," he said. Book value at the end of the first quarter was $62.15 a share.

A Yen for New Jersey. Bankers Trust New York Co. is seeking approval from the Federal Reserve Board to set up a trust company in New Jersey. The bank, which manages $105 billion of funds for public and private clients worldwide, is excluded from acting as an investment manager or custodian for the Garden State's public pension funds because it does not own an incorporated trust company in the state, a spokesman said.

BT New Jersey Ltd. is expected to begin operations late this summer, he said. It will be staffed initally with about 60 people now working at BTNY Services, the New Jersey-based operations center for Bankers Trust's trust department. The unit will be capitalized at $4 million and run by BTNY's senior manager, Jay Wilder, who will be president.

Morgan Unmoored? In its continuing drive to slash overhead costs, J.P. Morgan & Co. is easing more veterans into early retirement and is reorganizing businesses. It also may close some offices, particularly in Asia, where it is overstaffed, sources said.

Among the latest unannounced or planned departures, according to sources, are these 20-year Morgan veterans:

- Michael Stephen, the long-time head of the bank's representative office in the Philippines and overseer of its 20.4% stake in the Bank of the Philippine Islands.
- Michael Cleary, another 20-year Morganite who was a senior officer in Australia.
- Philip Murray, head of lending at Morgan Bank Delaware.
- William Holding, who was in charge of relationships with the U.S. subsidiaries of European corporations.

Mr. Murray, for one, is not being replaced.

Morgan last year laid out plans to cut 10% of its staff by the end of 1990. At the end of the first quarter it employed 13,900 people; some sources believe it hopes to reach 13,000 by year's end.

Many old-timers are nervous, noting that most executives who have left recently are in their late 40s or their 50s. A Morgan official said the company does not comment on employment policies or individuals.

Meanwhile, the head of Morgan's fledgling high-yield department is in line to expand his duties and perhaps move into a higher position, sources said.

Ramon deOliveira, a managing director, will soon gain control of both private placements and structured finance, areas J.P. Morgan Securities recently moved into, the sources said.

Mr. deOliveira said no final decision on the transfer had been made.

Neither Morgan nor other banks eager to break into high-yield — notably Bankers Trust and Citicorp — have underwritten a junk deal in the present moribund market.

But Mr. Oliveira said his unit is "looking at" placing a number of high-yield issues with registration rights in the private market.

Come to Sunny Arizona. Investment bankers specializing in bank mergers and acquisitions were chuckling last week over an unsolicited letter from F. Lee Jacquette, chairman of Arizona Commerce Bank.

He candidly laid out the problems of his $80 million-asset company: insufficient capital, a May cease-and-desist accord with regulators, a high volume of troubled loans, and Arizona's troubled real estate market.

The bank boasts a highly professional staff and a realistic business plan, he added. "Do you have any ideas for us?"

Mr. Jacquette said in a phone interview that he does not expect much response to his letter, which was sent to investment bankers culled from a list in *U.S. Banker magazine.* "We have a high-risk proposition for a high roller who wants to get into Arizona at this time," he said. "We need patient investors with reasonable expectations."

Mr. Jacquette says he arrived at the five-year-old bank last summer with "unrealistic expectations." About 18% of its $55 million loan portfolio is on a nonaccrual basis or in its foreclosed loan portfolio. The original plan to build a statewide branch network and then sell at twice book value to an out-of-state investor was conceived "in a different world than today," he concedes.

Arizona Commerce, which went public at $10.75 per share, is now trading on the American Stock Exchange at 25 cents per share. Its largest shareholder is the Resolution Trust Corp., which took over a thrift that seized the shares of the bank's now-bankrupt founder and former chairman, Ernest Garcia.

Arizona Commerce has three branches, down from eight, and 48 employees. Mr. Jacquette said it must double its regulatory capital of $5 million and needs at least $2 million by December to satisfy regulators. "We're in a midget in the land of giants," he conceded. "It's an uphill battle." ☐

Chemical Launches NY Grants Program

NEW YORK - Chemical Bank has launched a "Competitive Grants Program" to recognize the services provided by not-for-profit organizations serving the New York region.

Grant amounts range from $500 to $15,000. The size and experience of the receiving organization and how the funds will be used will help determine the amount of the award.

Application guidelines can be obtained at any of Chemical's 200 branches; the deadline for submissions is July 27.

COMMENT

Continued from *page* **4**

was broken. Before the day was out, Citibank joined all of the other banks in purchasing one-fourth of our investment, but they weren't really at risk anyway. We weren't going to let the bank close.

It took until September to wrap up the details, but when all the papers were signed the FDIC owned 80% of Continental and would pick up more at the end of five years unless the return from sale of bad assets was spectacularly successful. It wasn't.

The FDIC still holds $900 million book value in assets, and it will take years to complete the disposition. (In the San Francisco National case, the last asset was sold more than 20 years after the failure.)

Hunky-Dory for Continental

Meanwhile, Continental was a sure winner. It was highly capitalized, and the books were clean. The FDIC held all its junk.

Our plan from day one was to return the bank to private hands. This could not be completed for at least five years while we waited for final accounting on the asset loss. This occurred just nine months ago, and the FDIC picked up an additional 10 million shares at that time. Under the contract provisions, we expected it might take a few years after that for an orderly sale of our remaining stock.

Meanwhile, periodic sales were made: 12.5 million shares in November 1986 for $247 million; 13.8 million shares in December 1988 for $ 277 million; and nine million common and 12.9 preferred shares in August 1989 for $490 million.

A Model Bailout

Roger Watson, chief of research at the FDIC, called Continental the second most successful bailout after First Pennsylvania. I was particularly proud of the First Pennsylvania deal that I negotiated as FDIC chairman. We kept the bank open, made a modest profit in the process, and had a test run on how to conduct a successful rescue.

While on the subject of big bank bailouts, let me remind you of the grievous injustice in the FDIC assessment rules that give the handful of "too big to fail" banks a free ride at the expense of the thousands of community banks that pay full assessments and thus in effect are subsidizing the giants. The issue, of course, is payment of assessment on foreign deposits and depositlike instruments that are fully protected in a bailout. ☐

Consumer Group Says Bank Services Too Costly

Continued from *page* **2**

One banker said assertions made by the consumer advocates and the banking association may not be entirely inconsistent.

"They are probably both right," said P. Andrew Will, manager of consumer products for Minneapolis-based Norwest Corp.

Many low-income people do not keep deposits with banks, Mr. Will said, but "a high percentage don't hold accounts for reasons other than price." Mr. Will cited a study by the Minnesota Bankers Association that showed a majority of consumers who lack checking accounts prefer keeping cash, said bank locations are convenient, or simply do not like banks.

Since 1983, the federation said, costs for NOW accounts have risen 62.3% and regular checking accounts have risen 28%.

Lifeline at Norwest

Norwest affiliates in the Midwest offer an account with no minimum balance, no fees, up to eight free checks per month, and free ATM transactions, Mr. Will said. "If we are any indication, free or low-cost banking services are readily available," he said.

Deregulation has increased prices but also has provided consumers with wider choices, suggested Cynthia Glassman, director of research for the financial services consulting firm Furash & Co. "Before, when people thought they were getting something for free, they were really being subsidized by the interest ceilings," Ms. Glassman said.

Sen. Howard Metzenbaum, D-Ohio, is promoting a bill to require banks to extend services to the poor and other noncustomers by cashing government checks on demand and offering low-cost basic banking services.

Mr. Gerhardstein writes for the Medill News Service.

OTS' Easing Of Loan Limit Seen as Feeble

By ROBERT M. GARSSON

WASHINGTON — For savings and loan executives looking for temporary relief from tough new limits on loans to one borrower, the regulation issued last week by the Office of Thrift Supervision came as a disappointment.

"It's like attacking homelessness by expanding the IRA program," said Palmer Hamilton, a Mobile, Ala., lawyer. "It just doesn't have much effect."

ANALYSIS: *Follow-up on the news*

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 imposed national bank standards on the thrift industry, limiting most loans to no more than 15% of an institution's capital. An exception was made for loans for residential housing development, which could run as high as 30% of capital. Previously, thrifts had been able to lend the equivalent of 100% of capital to any one borrower.

In a speech to the U.S. League of Savings Institutions on June 25, T. Timothy Ryan Jr., director of the Office of Thrift Supervision, announced that the Treasury Department had agreed to a transition rule that would give well-capitalized institutions until 1992 to meet the new standards.

Qualifiers Are Few

That was little enough: With much of the industry struggling to meet the new capital requirements, only 1,100 institutions qualify under the rule, according to OTS.

But the regulation made public last week gave a good deal less than that.

The transition rule comes down to this:

- For loans backing the development of domestic residential housing, thrifts that already meet capital requirements taking effect in 1995 get a break: between now and the end of the year, they can lend up to 60% of capital to a single borrower. Next year, such loans will be limited to 30% of an institution's capital, the amount specified in the bailout law.
- For commercial loans, there is no transition period: Credit is limited to 15% of capital.

Little Benefit Seen

"I don't know what good this will do anyone," said David Danovitch, regulatory counsel to the National Council of Savings Institutions. Mr. Danovitch expressed surprise that the transition rule did not cover assets other than loans for residential

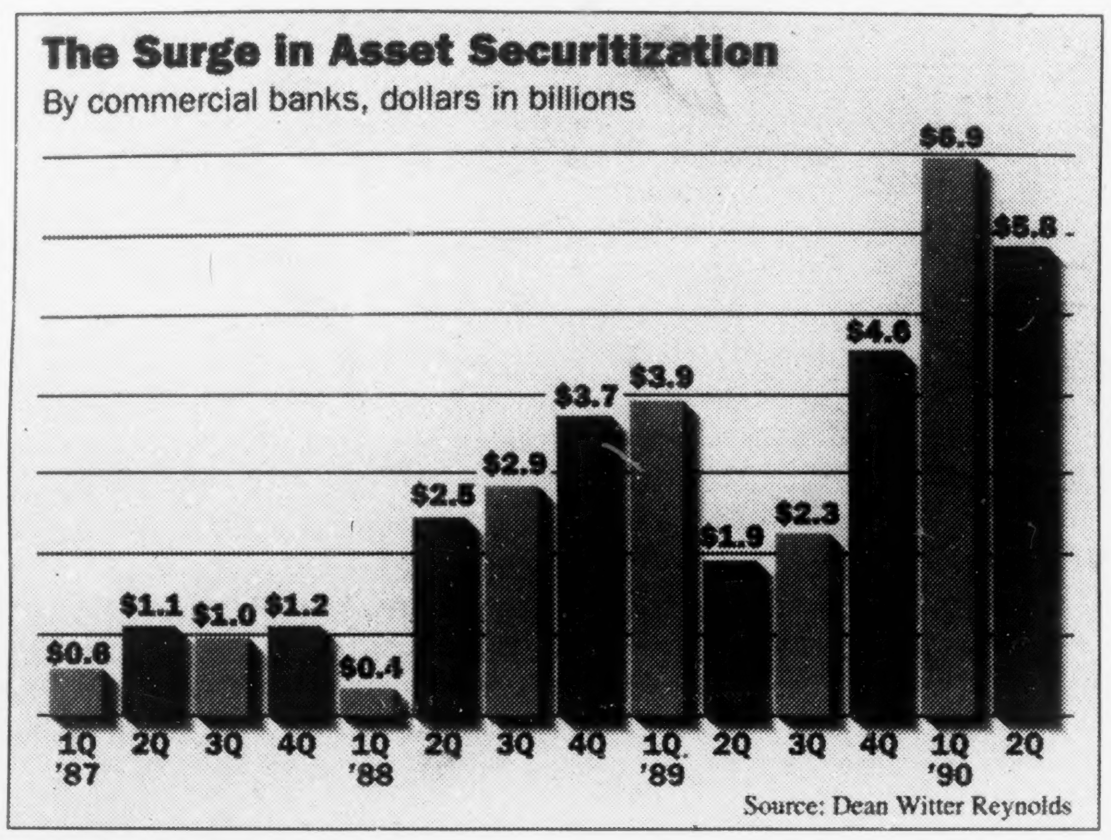
The Surge in Asset Securitization
By commercial banks, dollars in billions



Source: Dean Witter Reynolds

Banks Rushing to Securitize Assets, But Analysts Fear Long-Term Harm

By KELLEY HOLLAND

If a bank asset isn't nailed down these days, it may well be on the way to being securitized.

A market created five years ago when auto loans were first securitized has exploded as banks rush to issue securities backed by assets ranging from credit card receivables to recreational vehicle loans.

In the first half of this year, banks securitized $12.8 billion of their assets, compared with $5.9 billion during the first six months of last year.

Banks Are Big Players

Banks have issued 48.1% of the $82 billion in nonmortgage assets securitized in recent years and are increasingly finding willing buyers among pension funds and mutual funds holding corporate bonds.

Behind the rush by banks to this growing market is their need to pump up capital ratios. Securitizing takes the assets off their books, immediately increasing banks' financial ratios and reducing their need for capital.

But longer-term, analysts and capital markets specialists say, securitization may make it harder for banks to raise capital to fund the less-desirable assets they will have left on their books.

"Banks are securitizing their best assets," said one analyst.

OTS to Seek Bids Before Seizing Sick Institutions

By DEBRA COPE

WASHINGTON — Moving ahead with a plan to sell troubled thrifts before they become unattractive to potential acquirers, the Resolution Trust Corp. board on Tuesday authorized the Office of Thrift Supervision to line up buyers before seizing the institutions.

OTS officials said they will select eight to 12 institutions for a 90-day test of the accelerated resolution program. If the procedure succeeds, up to 70% of 299 thrifts with $193 billion in assets that the OTS has identified as most likely to fail could be sold without being placed in RTC conservatorship, according to William Roelle, director of RTC's resolutions and operations division.

3-4 Months for Results

"At the end of three or four months, we should know definitively if this program will work," OTS Director T. Timothy Ryan Jr. said in an interview. "We're all enthusiastic about the prospects for success."

Mr. Ryan, who sits on the RTC board, said he envisions

Norwest, United Of Colorado Talking Merger

Norwest Corp. and United Banks of Colorado Inc. announced late Thursday afternoon that they were discussing a possible merger.

"There is no definitive agreement, and there is no assurance that any such agreement will be reached," according to the two-sentence statement.

Company Would Be in Top 20

A merger between the two holding companies would be one of the biggest ever in banking, creating the nation's 20th-largest.

Norwest, an eight-state superregional based in Minneapolis, now ranks 30th, with $24.33 billion in assets. Denver-based United Banks is Colorado's largest holding company and the 81st-largest in the United States. It owns 40 banks in Colorado and has $6.08 billion in assets.

The announcement came after the stock market closed. Nor-

Though Bank Shares Are Down, Insiders Are Buying Vigorously

By GORDON MATTHEWS

NEW YORK — With most investors running away from bank stocks these days, it sometimes seems that the only buyers willing to step forward are the banks' own officers and directors. And they have been active buyers, indeed.

In June, for instance, 10 insiders at First Bank System, including the new chief executive officer, John F. Grundhofer, spent nearly $665,000 to acquire 43,590 shares of its stock.

In May, five insiders of Southtrust Corp., Birmingham, Ala., acquired 26,230 shares for $445,910. The largest buyer, director Raymond J. Harbert, purchased 15,000 shares.

Stocks Have Plunged

Also in May, 10 officers and directors of Comerica Inc., bought 4,180 shares for $161,250. Insider buying at the

COMMENT/ *By Charles H. Nobs and Eleni Istavridis*

Cost Leadership Gives Competitive Edge

While New York City may not always be an accurate barometer for the state of the national economy, today's city conditions pose an interesting metaphor for the banking industry.

Manhattan employment is down in both manufacturing and service sectors. Real estate markets are in a slump. Opportunities to raise tax revenues are evaporating, and embedded costs are uncompetitively high.

This is particularly relevant to financial firms based in new York, where the health of the city and the financial-services sector are so closely related. Cities and industries alike can be ripe candidates for restructuring.

Forecast for the '90s

Certainly, the 1980s showed that cost leadership is key to success in any restructured setting. Whether the restructured corporate environment is steel, electronics, automobiles, airlines, computers, or telecommunications, market leadership is invariably associated today with those firms that managed their cost profiles with the greatest finesse and foresight.

Just as these industries underwent a sea change in the past decade, so too will a combined banking and securities industry be restructured in the 1990s.

Stratification trends in returns to shareholders, market valuations, and market share are predestining the fortunes of most banks. Analysis by IDC Financial Publishing shows that banks with better credit quality and better cost control over the 1984-89 time frame achieved stronger investment returns than those institutions with less favorable credit and cost performance.

Market Capitalization

Research by First Manhattan Consulting Group shows that banks with "strong" expense performance have stock prices that are 60% or more higher than if they had "average" performance. Studies by McKinsey & Co. show that superregional banks increased their average market capitalization almost seven times during 1982-88.

This far outdistanced multinationals, who increased their capitalization less than two times. Regionals also increased their market share of total bank deposits, according to McKinsey, while money-center and community banks lost ground.

> **"Market leadership is invariably associated today with those firms that managed their cost profiles with the greatest finesse and foresight."**

Thus the gap between the "strong" and "less so" is well established and growing. A fundamental reshaping of the banking industry has already begun and will accelerate. To exert cost leadership, knowledge about the relevant competitive universe must be gained and details about relevant competitors' costs must be learned.

Factors such as the growing strength of superregionals and availability of foreign capital will eventually affect most aspects of retail and wholesale banking. These considerations will alter scale economies, pricing latitude, and technology strategies for many financial products, rendering them fundamentally unattractive for all but those bank providers whose size and business mix have been rationalized along the new competitive lines.

Expense or Investment?

Part of this rationalization process involves a strong differentiation between expense and investment. Since expense is most often defined by the existing, rather than future, culture, it must be rigorously questioned. Moreover, expense must be made variable to the greatest practical degree, thereby allowing changes in business and transaction volume to be met with expense growth or decline.

Examples include incentive-based compensation across various job classifications, use of contract and temporary workers where feasible, flexible benefits programs, profit sharing rather than guaranteed savings plans, and outsourcing a broad range of bank service activities.

The contracting-out of nonstrategic bank services, often

GRAPEVINE/ *By Jed Horowitz*

Ties that Bind. Money-center bank executives these days are quick to speak about the theoretical benefits of mergers, but few have spoken of actual combinations or hard numbers.

One who has not shied away from getting specific, however, is Manufacturers Hanover Corp.'s president, Thomas Johnson.

At a meeting with institutional investors, he said that a combination of any two of the following New York branch-system banks could lead to incremental annual earnings of between $400 million and $700 million for the merged institution: Chemical Banking Corp., Chase Manhattan Corp., Bank of New York Co., and Hanover.

Mr. Johnson's company, meanwhile, may try to "unlock hidden values" on its own, a Merrill Lynch & Co. analyst, Judah Kraushaar, wrote in a recent report. Manny Hanny may eventually unload its Park Avenue headquarters building, which the company values at between $500 million and $750 million, and it is likely to sell entire business lines overseas.

* * *

Chasing the Reorganization. Chase Manhattan Corp. has reassigned a number of executives after dissolving its tripartite global-individual-institutional structure. The most dramatic shift is of Hughlyn F. Fierce, believed to be Chase's highest ranking black executive. Mr. Fierce, who was head of the Asia-Pacific corporate finance unit, is now to run a unit that markets retail bank products to municipal and state governments in New York City, Westchester County north of the city, and Long Island.

Mr. Fierce's former domain has been combined with the Japanese corporate finance unit under Timothy McGinnis, head of the Japan unit.

Chase also bestowed new responsibility on Michael F. Dacey, head of North American corporate finance. With the transfer of vice chairmen Richard Boyle and Robert Douglas to nonline duties, Mr. Dacey has full responsibility for Chase Securities, Chase Municipal Securities, Chase Leasing, and domestic institutional banking services.

Robert D. Hunter added Chase Home Mortgage Corp. to his national financial services empire. Donald Boudreau, head of the metropolitan community bank, also now oversees Chase's regional bank franchise.

* * *

The Fizz Is Gone. It's not just money-center banks that are curtailing their corporate finance and investment banking ambitions. The sharp downturn in corporate finance activity also is affecting regional banks.

With each passing month, the membership rolls of the Bankers Association for Corporate Finance – a group of regional bankers who aspired to be on the cutting edge in mergers and acquisitions, private placements, and other investment banking areas – are dwindling. The group was founded a few years ago by about 30 bankers who meet twice a year to share ideas and plans.

Recent Refugees

Among the most recent refugees from the group are bankers at First Fidelity Bankcorp's Fidelity Bank and NCNB Corp.'s North Carolina bank.

The three principals of Fidelity's investment banking group – Mark DeNino, Leslie Brun, and Jai Bowers – left recently to join CMS Cos., a Philadelphia-based personal investment banking firm. Mr. DeNino, who would not comment on the departure, said the trio continues to offer M&A and private-placement services to middle-market customers.

Investment Banking Mandates

A First Fidelity spokesman said that Stephen H. Clark, who heads the bank's asset sales units, has picked up the group's investment banking mandates.

At NCNB, veteran banker J.G. Richards Roddey – who has run the bank's corporate finance activities for over 10 years – moved last month to London.

"Either congratulations or condolences are in order," joked Mr. Roddey, 53, an NCNB managing director and founding member of the Bankers Association group. In London, he is overseeing NCNB Corp.'s two British-based branches and coordinating activities with NCNB's British merchant bank and its broker-dealer, Panmure Gordon & Co.

His U.S. domain is being split between managing directors Richard Gross, who will run corporate finance activities, and Richard Robb, who will be in charge of domestic mergers and acquisitions.

* * *

Guten Morgan. When J.P. Morgan & Co. set up a group to develop government and business contacts in eastern Europe in May, it targeted privatization and debt restructuring for the nascent democratic governments in the region as an initial goal for the group. Debt restructuring was a natural since the group reports to Rodney Wagner, Morgan's veteran negotiator on Third World debt.

It turns out that Morgan also has an ace in the hole when it comes to privatization. Detlev Rohwedder, a member of the advisory board of its German bank subsidiary – J.P. Morgan GmbH – has just been named chairman of Treuhandanstalt, a trust that Morgan says owns most of East Germany's industrial companies and is charged with privatizing them. Herr Rohwedder also is chairman of Hoesch, the West German steel and engineering conglomerate.

* * *

Hong Kong Bound. State Street Bank and Trust Co. won permission from the Federal Reserve Board late last month to convert a Hong Kong-based depository trust subsidiary to a full branch.

An official at the Boston-based bank company said the conversion will allow the State Street Boston Corp. unit to expand its foreign-exchange trading activities, since the branch can tap the capital of its parent company. The conversion still awaits approval from Hong Kong authorities.

Although many foreign companies are fretting about the return of the British territory to China in 1997, State Street sees Hong Kong – where it employs about 100 people – as a vital part of its expansion into the Far East. Earlier this year, it announced plans to buy Wells Fargo & Co.'s Tokyo branch. The $10 billion-asset State Street specializes in securities custody and asset management. ☐

STOCKS

Though Bank Shares Are Down, Insiders Are Buying Vigorously

Continued from *page* **1**

Detroit banking company has been high for several months.

Banks and thrift institutions, whose stocks have plunged since last fall on fears of loan problems and lower profits, lead all groups of publicly traded companies in insider stock acquisitions during the past year, according to Robert Gabele, president of Invest/Net, a Miami firm that tracks such activity.

"The buying has continued all the way down," Mr. Gabele said on Tuesday. "The fact that they're still buying at the lower levels has to be seen as a vote of confidence for the industry.

Buying Despite Uncertainties

"There are a lot of uncertainties out there for the bank, but you have to say that there are people at the banks stepping up to plate," he noted.

The trend goes beyond bank stocks that have been heavily sold by regular investors, and includes some that are well-liked on Wall Street and have fallen far less than others in the industry.

At Corestates Financial Corp., Philadelphia, a favorite of many banking analysts, three directors recently purchased 6,500 shares for $178,750.

Thrift Stocks Favorites

Thrift stocks, shunned by many, are also insider favorites. Mr. Gabele said that Dime Savings Bank of New York; Greater New York Savings Bank; Coast Savings Financial Corp., Los Angeles; and Conservative Savings Bank, Omaha, Neb., have been among the leaders in inside buying in the past six months.

At First Bank System, the heavy buying activity — 43,590 shares at an average cost of $15.25 per share — is viewed as a sign that top managers at the Minneapolis company feel restructuring at the long-troubled company is complete and that they believe the stock will appreciate significantly in the future.

Analysts Neutral

But most Wall Street analysts are decidedly neutral of the stock, noting that it already trades at a premium to other regional banks. The stock was off 12 cents to $14.875 in midday trading on Tuesday.

Analysts take a wait-and-see attitude on First Bank System's revised business strategy and anticipate up to 10% dilution of earnings per share through next year, after the company's recent recapitalization with a $175 million private placement of common stock.

"In general, turnarounds in 1990 may be more difficult to engineer than those of the early 1980s," Kristina E. Andersson, a bank analyst at Kidder, Peabody & Co., noted in a recent report on the company.

Some analysts said the large amount of insider buying may have been a show of faith in the company following the private placement, which was taken by Corporate Partners, an investment group, and the State Board Administration of Florida.

A spokeswoman at First Bank System declined to comment on that possibility.

A leading inside buyer at the company last month was Mr. Grundhofer, the new chairman and chief executive officer. He purchased 10,000 shares.

Mr. Grundhofer, who joined the company on Jan. 30 after a career in California at Wells Fargo & Co. and Union Bank, made his purchase on a single day, June 21. He paid $14.50 per share for a total investment of $145,000.

The June acquisitions were substantial enough to increase by 11.5% the amount of stock owned by officers and directors of the banking company, as reported last Feb. 1.

Selling Drives Stocks Down

Late afternoon selling drove bank stocks sharply lower Tuesday. One analyst said there were late rumors that another analyst would issue a report that he was more bearish about banks than he had been previously. However, most said they were at a loss to explain the late drop beyond that banks followed the overall market, which turned sharply lower late in the day.

Bankers Trust New York Corp. lead money center banks, falling $1.125 to $39.75. Manufacturers Hanover Corp. was off 87.5 cents to $32.625. Chemical Banking Corp. was off 75 cents to $24.75. Bank of New York, Chase Manhattan Corp. and Citicorp were also lower, although not as severely.

The Dow Jones Industrial average, after being off about 13, fell 10 points in the last 30 minutes of trading to end the day at 2890.84, down 23.27. □

CAPITAL

Banks Rushing to Securitize Their Assets

Continued from *page* **1**

"Isn't that eventually going to make it harder for banks to sell stock and debt?"

In a single week in June, banks issued $2.8 billion in securities backed by credit card receivables. And Norwest Corp. securitized $95 million in manufactured home loans.

"The asset-backed market is really developing into the fourth leg of a chair: governments, corporates, mortgages and now asset-backeds," said Stephen A. Candland, senior vice president at Dean Witter Reynolds Inc.

Deals Marketed Globally

Recently, the market has spread beyond the United States. Citicorp has taken the lead, issuing billions of dollars in securities backed by credit cards from subsidiaries called global credit card trusts.

European banks are also starting to securitize assets. Swiss Bank Corp. recently issued $500 million in securities backed by automobile loans, for example.

By taking the assets off their books, banks raise their equity-to-assets ratios and their return on assets. Equally important, they continue to earn the difference between the yield on the asset and the cost of funding it, and they are able to take the tax deduction for the interest expense associated with the securitization.

Raising return on assets makes a bank appear more profitable, and more appealing to current and potential investors, according to Jack J. Ross, a director at Merrill Lynch Capital Markets.

"They have improved their risk profile by securitizing those assets," he said. Banks "still retain the earnings benefit of those assets, even though they're off balance sheet."

As for investors, portfolio managers of trust accounts and corporate bond funds are eager for high-grade securities, such as asset-backeds, with yields above Treasuries, according to Alan F. Bembenek, an analyst at Fidelity Management and Research Co.

"I think you're going to see a continuation of large issues coming to market," he said.

But some capital markets specialists and analysts question the long-term implications. If a bank transfers all its best assets off its balance sheet, investors in that bank's debt and equity may balk at the notion of financing only that bank's lower-quality assets, they say.

"For a bank with problems in other areas of its loan portfolio, securitization would affect the receptiveness of investors to its securities," William King, a bank bond analyst at Merrill Lynch Capital Markets. "For less than top-quality banks, securitizing leaves their real estate loan portfolios looming larger and larger."

Mr. Bembenek agreed. "Once those assets are removed from the balance sheet, what's left is relatively unattractive," he said.

Several banks have been particularly aggressive in securitizing assets. Citicorp has been the biggest issuer, but MNC Financial Inc., First Chicago Corp., Chemical Banking Corp., Security Pacific Corp., BankAmerica Corp., and Hongkong & Shanghai Banking Corp.'s subsidiary Marine Midland Bank have all been major players in the asset backed securities market.

And banks are having to pay less in fees to underwriters as competition heats up for the business and underwriting presence in asset-backeds shifts. First Boston dominated the market in its early years.

But Merrill Lynch Capital Markets is making inroads. In 1990, Merrill has underwritten 20% of the asset-backed issuance, compared with First Boston's 26%.

Automobile loans and equipment leases were the collateral used most often in the market's early years. But credit card receivables began to be used in 1987, and they now back 42% of the asset-backed securities in the market. Home equity loans, boat loans, time-share loans, and recreational vehicle loans have all been used for collateral, and securities backed by other assets, such as commercial loans, are reportedly in the offing. □

A Bigger Role for Credit Cards

FINANCIAL TECHNOLOGY UPDATE

NCR in the '90s: helping you manage change

The fiercely competitive decade which lies ahead will bring unprecedented challenges to the banking industry, and therefore unprecedented technology, designed to meet those challenges.

In an era when banks must reduce the cost of delivery while increasing its quality, managing information technology has become the single most powerful factor for success in banking. In retail banking for example, service, sales and office automation must be integrated into a single retail delivery system that can accommodate the inevitable changes of technology.

NCR has evolved a long-term strategy to enable its customers to take full advantage of these changes. It's called "Open, Cooperative Computing. The Strategy For Managing Change." It means providing customers with a vendor-neutral computing environment based on open industry standards, allowing information resources to interoperate enterprise-wide as one integrated system, and in a way that is easy to use.

Simply put, NCR's delivery systems will seamlessly integrate customers' systems, networks and software from multiple vendors into a single, flexible solution.

This long-term strategy, which began in 1981 with a commitment to open systems, has positioned NCR as the only company with the products, global presence and financial clout to deliver its advantages to the end-users.

For example, Integrated Retail Delivery Systems (IRDS) will allow customers to deliver new products in new ways. Self-Service Automation will continue to help the branch to focus on cost reduction while freeing up branch personnel for cross-selling efforts. New NCR Image solutions will help create new productivity in document management, item processing and office information systems.

NCR will bring its leading-edge technology together with that of other niche technology providers in an architecture designed to facilitate change and deliver superior solutions to critical business problems. This commitment will help financial institutions manage change now and throughout the evolution of their retail delivery strategies.

Utah Has Opened Door to Interstate Branch Banking

By SAM ZUCKERMAN

SAN FRANCISCO — In a little-noticed decision that further erodes prohibitions against interstate branch banking, Utah authorities have allowed BankAmerica Corp. to operate a Salt Lake City office as a unit of its Arizona-chartered bank.

BankAmerica has obtained full banking privileges in Utah and may open more branches if it wishes. Previous interstate branching decisions have limited the number or location of offices.

"This is the first effective creation of a multistate bank since the Civil War," said Michael Roster, a lawyer with Morrison & Foerster, Los Angeles, who worked for BankAmerica to obtain regulatory approval.

ANALYSIS: *Follow-up on the news*

Lawyers and banking regulators familiar with the case said the ruling sets a precedent that could ease the way for further interstate branching by state-chartered banks. "It's a harbinger of things to come," said James B. Watt, president and chief executive of the Conference of State Bank Supervisors.

Utah Office Purchased

BankAmerica acquired the Utah office as part of its $81 million purchase of some Western Savings and Loan Association assets and liabilities from the Resolution Trust Corp. at the end of May. Western had 61 offices in Arizona and a lone branch in neighboring Utah.

On acquiring Western, BankAmerica immediately converted it from a thrift to a state-chartered commercial bank.

As part of the package of regulatory approvals needed for the deal to go ahead, Utah's top banking official formally allowed BankAmerica to operate the Salt Lake City branch as a full-service office using the Arizona charter.

Bowing to the Inevitable

George R. Sutton, the Utah commissioner of financial institutions, said he permitted BankAmerica to operate with an out-of-state charter not because of special circumstances but because he believes that states must accommodate interstate branching.

Congress is considering legislation that would permit nationally chartered banks to branch across state lines. That is a signal, Mr. Sutton said, that states must get on the bandwagon.

"If states do not go along with

Cost Cutting Gains Momentum As Sources of Revenue Dry Up

By PHIL ROOSEVELT

NEW YORK — Commercial banks' cost-control drive, increasingly visible in recent weeks, has only just begun.

Faced with weak earnings and sluggish loan growth, banks across the country have been moving aggressively to cut their noninterest expenses, such as personnel, branches, and back-office systems.

Bankers and analysts said the increased austerity will shape banks' 1991 budgets, which are now in preliminary planning stages.

"We are looking at 1991 as another year in which we will be giving a lot of attention to cost control," said J. Robert Lee, chief financial officer of First Union Corp., Charlotte, N.C. He hopes to cap cost increases to 3%, despite an expected inflation rate of 4% to 5% and hefty increases in postal rates and deposit insurance premiums.

Out-and-Out Reductions

Many banks have striven in recent years to better control the annual growth of their noninterest expenses. But now, a significant portion of the industry appears to be going a step further and actually reducing the expenses.

A recent survey of 32 banks by Trans Data Corp., an affiliate of the *American Banker*, found that 25% were cutting costs this year, by magnitudes ranging from 3.5% to 15% from 1988 levels. The greatest reductions were reported by larger banks.

Moreover, 21% of those surveyed already have plans to cut costs in 1991.

Such reductions were far more rare just two years ago, consultants and analysts said. They

U.S. Files 500 Suits Against Former Bank, S&L Officials

By DEBRA COPE
and BILL ATKINSON

WASHINGTON — In a dragnet that could eventually snare the son of President George Bush, federal investigators have filed more than 500 lawsuits against former directors and officers of failed banks and thrifts.

The Federal Deposit Insurance Corp. chairman, L. William Seidman, disclosed the number of legal actions in a House subcommittee hearing on Wednesday. He did not discuss the case of Neil Bush, the President's 35-year-old son, a former director of a failed thrift in Colorado.

Substantial Penalties Sought

Probes of 550 banks and 350 thrifts under the FDIC's control and 400 thrifts in the Resolution Trust Corp.'s caseload have led to the professional liability suits seeking civil penalties ranging from $1 million to $1 billion, Mr. Seidman, who is also chairman of the RTC, told the House Judiciary subcommittee on criminal justice.

Neil Bush fits in the category of those targeted by investigators sifting through the ruins of failed institutions. The younger Mr. Bush was a director of the defunct Silverado Banking, Sav-

U.S. Orders 20% Writedown on Latin Lending

By JAMES R. KRAUS

NEW YORK — Regulators ordered U.S. banks on Wednesday to write down their medium- and long-term loans to Argentina and Brazil by 20% in the third quarter.

The writedowns will have no immediate impact on earnings, since banks will use existing reserves against loan losses to cover them, bankers and analysts said. However, the move may force some banks with low reserves – including Citicorp and Chase Manhattan Corp. – to replenish them later.

Total of Lending

U.S. banks had outstanding loans of $16.3 billion to Brazil at yearend, of which nearly $10 billion are medium and long term. Loans to Argentina totaled $4.5 billion, of which $3.4 billion are

U.S. Banks Increase Dominance In Global Syndication of Loans

By JOHN EVANS

LONDON — U.S. banks are tightening their grip on the international loan-syndication market this year, a British magazine survey shows.

Nine of the top 10 global loan syndicators in the first half of 1990 were U.S. banks, according to *International Financing Review*, an *American Banker* affiliate. U.S. banks took six of the top 10 positions in the first six months of 1989.

The U.S. dominance of the global syndication business came despite a 30% drop in corporate borrowing at home, to $68 billion from $97 billion in the same period a year earlier. European funding expanded 13.5% to $46.3 billion from $40.8 billion.

Total syndicated lending in the first half dropped 18% to a total of $136.8 billion from $167.4 billion a year ago, the

COMMENT/*By Sanford Rose*

Determining Loan Values And Marketing Outlays

How much money should a bank spend to market a given type of loan? At most banks marketing expenditures depend more on educated guesses than on scientific evaluations. Yet it is possible to rationalize marketing costs based on an analysis of the economic value of various loan products. Such an analysis will reveal the amount of money that can be allocated to product sourcing or marketing while still preserving an acceptable level of loan profitability.

To determine the appropriate level of marketing expenditures, banks must do a capital-budgeting analysis of loan types, taking into consideration their size, term to maturity, interest rate, the expenses involved in booking and servicing, expected losses, and the cost of both the internal and external funds used to finance them.

As pointed out by Michael Lenora, vice president for marketing at The Walter Latham Co., a direct-marketing agency specializing in financial services and domiciled in Broadview, Ill., determining the economic value of a loan is conceptually similar to determining the value of the lender. Both values depend on discounting a complete set of future cash flows by the appropriate cost of capital.

Determining Discount Rates

The value of a loan is determined by comparing the discounted present worth of the cash flows it will generate in the future with the current cost of making the loan. The trick, of course, is to choose appropriate discount rates.

Since a lender assembles funds from both outside creditors and shareholders, he must discount future cash flows at rates that provide acceptable returns to each class of funds provider. The rate of return demanded by outside creditors is the rate of interest at which they lend. The return demanded by equity holders is determined by the opportunity cost of equity – the return that could have been earned had the shareholders put their money in other equity investments of comparable risk.

Thus the appropriate discount rate is a composite number, reflecting both the cost of debt and the usually much higher cost of the equity component of investable funds. If the discount rate is properly computed, it already incorporates the return required by debtholders and that which is minimally acceptable to shareholders.

Generating Excess Returns

Hence the lender is justified in making the loan if the discounted present worth of its net cash flows (future revenues minus initial and future expenses) is just equal to the loan size. If the present value of the net cash flows exceeds the loan size, the lender is generating excess returns, which can be retained, serving to boost stock values, or else earmarked to appropriate marketing expenditures. Thus, the level of permissible marketing outflows emerges as a byproduct of a careful discounted cash-flow analysis.

Mr. Lenora of The Walter Latham Co. has analyzed the excess returns, or permissible marketing costs, available from installment loans of various types and terms. He finds, for example, that for installment loans of $10,000 made at an 18% rate of interest for 48 months, the excess value, assuming 4% losses, $50 initial booking expense, and $12 monthly maintenance, amounts to about $445.

In other words, $445 is the

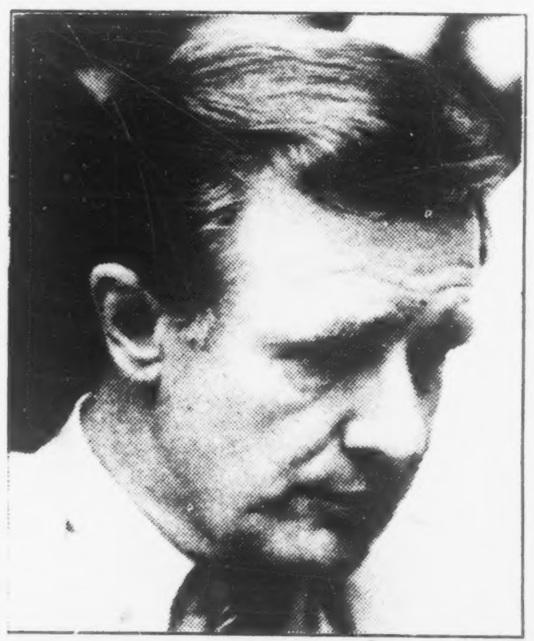
Common Cause Lists The D.C. Recipients Of Columbia Largess

California's **Columbia Savings** and Loan, the once high-flying Beverly Hills thrift now under scrutiny by authorities, was uncommonly generous in its political contributions, according to a study by **Common Cause,** the self-proclaimed "citizens lobby."

In the nine-year period ended in April, Columbia executives and their spouses gave a total of $284,900 to congressional candidates and political party committees, the study found.



Louise Krafft

Rep. Donald W. Riegle
Michigan Democrat

The top recipient was Senate Banking Committee Chairman Donald W. Riegle, D-Mich., who also received large contributions from individuals associated with the failed Lincoln Savings and Loan, Irvine, Calif.

Mr. Riegle received $29,000 from Columbia executives and spouses, beating out Sen. Jake Garn, R-Utah, who received $25,200 during the period under study. Mr. Garn is the committee's ranking Republican and was its chairman.

The Common Cause disclosure comes after the Office of Thrift Supervision filed civil action against Columbia and former chairman Thomas Spiegel. The OTS wants to collect $24 million that it alleges Mr. Spiegel squandered on corporate jets, lavish bonuses, vacation condominiums, and other extravagances.

While Mr. Spiegel and his associates paid closest attention to the Senate Banking Committee chairman and ranking Republican, other members were treated well.

Next in line were Sen. Timothy E. Wirth, D-Colo., with $17,500; Sen. Bob Packwood, R-Ore., $17,000; Sen. Pete Wilson, R-Calif., $15,500; Sen. Alan Cranston, D-Calif., $13,500; Sen. Howard M. Metzenbaum, D-Ohio, $11,000; and Sen. Alfonse M. D'Amato, R-N.Y., $7,000. Mr. Wirth, Mr. Cranston, and Mr. D'Amato are members of the banking committee.

House members made the list too. Rep. Howard L. Berman, D-Calif., received $5,000, while Rep. Lee H. Hamilton, D-Ind., and Rep. Carroll Hubbard Jr., D-Ky., both got $4,000.

Former Rep. Fernand J. St Germain, D-R.I., the chairman of the House Banking Committee until his defeat in 1988, received $15,700.

The Democratic party fared even better. The Democratic National Committee and the two Democratic campaign committees received a total of $66,850, Common Cause said. The Republican National Committee received $1,000. But lest anyone feel sorry for the Republicans, Common Cause said Mr. Spiegel made a soft-money contribution of $100,000 to President Bush's 1988 campaign.

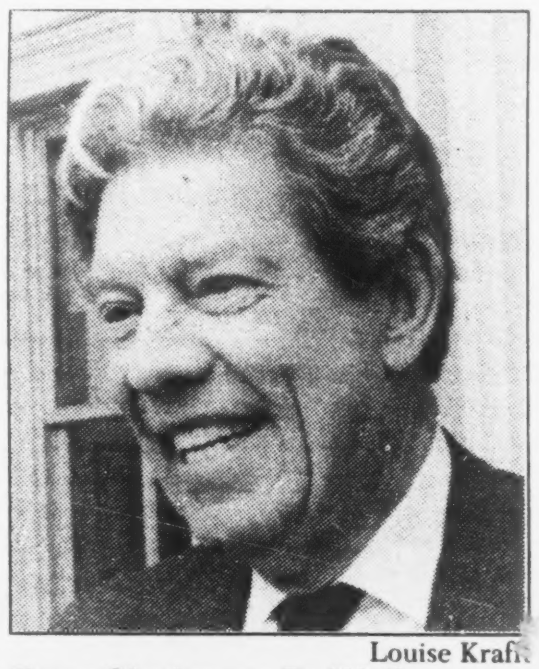
Bank Directors Take Aim at Crime Bill

A fledgling trade group representing bank directors has charged that a crime bill sponsored by Chalmers P. Wylie, R-Ohio, could drive away directors from serving on boards of banks and savings and loans.

The **American Association of Bank Directors** is taking issue with several provisions in the Financial Crimes Punishment and Prevention Act of 1990, backed by such heavyweights as House Banking Committee Chairman Henry B. Gonzalez, D-Tex.; Frank Annunzio, D-Ill.; and Doug Barnard Jr., D-Ga.



Louise Krafft

Rep. Chalmers P. Wylie
Ohio Republican

In short, the legislation cracks down on bank and S&L executives who commit financial crimes.

Although it agrees with the spirit of the law, the association charges that the legislation is drafted so broadly that unwitting directors who sit on the board of a failed institution could have their assets frozen as well as tax returns released to banking agencies.

"It [the legislation] is overly broad," said David H. Baris, executive director of the Washington-based trade association. "Those directors who read it carefully will be scared."

Mr. Baris said the association believes that freezing assets may be unconstitutional. Mr. Baris said the group has about 200 members, but he would release only the names of the association's advisory committee, which includes Alfred M. Pollard, director of federal government relations, **Security Pacific** Corp.; Dana H. Cook, partner and national director of financial institution capital markets, **KPMG Peat Marwick;** and William Resnik, senior counsel of Seattle-based **Seafirst** Bank.

The association also takes issue with with an amendment made to the legislation on June 28 that increased the financial risk to directors. The House Banking financial institutions subcommittee took the action without holding a hearing.

According to the association, the amendment permits a banking agency to have a court issue a restraining order prohibiting any party subject to a civil cease and desist order or other actions from withdrawing, transferring, or disposing of assets.

The association has requested a hearing.

Laundering Bill Gets Thumbs-Up from ABA

The banking community is generally pleased with the Senate version of money-laundering legislation that will be considered by the Senate Banking Committee on July 17. In particular, the **American Bankers Association** is pleased with a new provision that shields a company from liability if it acquires an institution that violated money-laundering laws.

However, the trade group listed a number of concerns in a June 26 letter to Sen. Donald W. Riegle, D-Mich., the banking committee chairman. For example, the bill's removal provisions may be too harsh, the ABA said.

"While removal authority is justified for individuals who violate money-laundering laws, removal for record-keeping violations of the Bank Secrecy Act may be in the majority of cases inappropriate and in our opinion should be addressed through civil penalties," the letter said.

Amro Cuts a Merger Link To Clear Way for Another

By JOHN EVANS

LONDON — Amsterdam-Rotterdam Bank cut its last links with Belgium's Generale Bank on Wednesday, paving the way for merger with Amsterdam-Rotterdam's fellow Dutch bank, Algemene Bank Nederland.

Amro said that its chairman, Roelof Nelissen, had resigned from Generale Bank's supervisory board. Also, Generale's chairman, Paul Janssen, has left the Dutch bank's board.

The Last Remaining Links

The seats on the respective boards were the only links that remained after merger plans were abandoned in August 1989. The two banks had planned to merge to compete better when the European Community becomes a single market in 1992. But their plans were scuttled because of legal, tax, and supervisory problems.

"We're back to where we started – good friends, that's all," said an Amro spokesman.

The proposed Dutch merger, first announced in March, will create Europe's seventh-biggest bank, with $170 billion in assets, and one of the world's top 30 banking companies.

> **Amro's deal with Alegemene Bank Nederland is intended to strengthen its position at home and abroad.**

Amsterdam-Rotterdam and Algemene Bank Nederland have made it clear that their merger is aimed not only at speeding their banks' ability to expand abroad but also at strengthening their combined position in their own domestic market.

Strong capitalization is required "if you want to be a global player from a small market like the Dutch," said ABN chairman Robert Hazelhoff. "A merger would put us among the top banks and allow us to expand rapidly." □

U.S. Orders Writedown on Latin Loans

Continued from *page* **1**

medium and long term.

Regulators ordered banks to write down their loans to Argentina by 40% last year after the country suspended interest payments. The latest writedowns mean regulators do not expect banks to collect more than 40 cents on the dollar of their loans to the Latin American country.

Argentina resumed nominal interest payments of $40 million a month in June. Brazil has not paid any interest on its foreign commercial bank debt since March 1989.

Wednesday's action by the Interagency Country Exposure Review Committee was the first time banks have been ordered to write down Brazilian loans. The regulatory agency comprises nine representatives from the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corp.

"Argentina is an anticipated continuous writedown, but Brazil is a new name in the equation," said James J. McDermott, executive vice president with Keefe, Bruyette & Woods Inc. in New York.

The level of reserves against losses on Third World loans varies widely. J.P. Morgan & Co., for example, is reserved for 100% of its loans.

Citicorp, however, is reserved for only 38% of its medium- and long-term loans, Manufacturers Hanover Corp. for 35%, BankAmerica Corp. for 41%, and Chase Manhattan Corp. for 45%, according to Keefe Bruyette.

> **"Argentina is an anticipated continuous writedown, but Brazil is a new name in the equation."**
>
> **James J. McDermott**
> *Keefe, Bruyette & Woods Inc.*

Citicorp will not be affected by the latest Argentine writedown since it wrote off 60% of its loans to the country last March, on its own initiative.

The reserves of Citicorp and other major banks will be seriously depleted by the Brazilian writedown.

At yearend, Brazil owed Citicorp $3.9 billion, BankAmerica Corp.$2.65 billion, Chase Manhattan Corp. $2.3 billion, Manufacturers Hanover Trust Co. $2 billion, and Chemical Banking Corp. $1.5 billion.

Argentina owed Citicorp $900 million, Manufacturers Hanover $888 million, Chase $580 million, J.P. Morgan $400 million, and BankAmerica $380 million.

Although banks stand to gain tax deductions from the writedowns, they will be of little benefit due to lackluster earnings.

"Profits are at depressed levels and tax deductions are about the last thing banks need now," said J. Richard Harvey Jr., a partner with Price Waterhouse.

The writedown order apparently took bankers by surprise. Few of them expected the U.S. government agency to order additional writedowns because both Argentina and Brazil were moving to open talks with their banks. □

U.S. Banks Build Dominance in Global Syndication

Continued from *page* **1**

magazine reported.

U.S. banks are "learning earlier than most banks" to adjust to the tougher lending climate, said Rudiger Eisenhart-Rhote, a managing director at Chase Manhattan Corp. "Necessity is a very forceful innovator."

Guidelines issued by the Bank For International Settlements require banks to back their loans with more capital. International loan syndications have become increasingly attractive because they pool risk among a group of banks, requiring participating banks to put up smaller amounts of capital.

And the big banks that arrange syndications also welcome the much-needed fees that they collect for their efforts.

While money-center banks such as Citicorp have historically been major forces in loan syndications, they have rarely dominated to the extent seen this year, bankers said.

For example, Chemical Banking Corp., ranked 19th in first-half 1989 lending, jumped to second place this year. Continental Bank Corp., ranked 17th a year ago, is now in 10th position. The only non-American to figure in the top 10 is Britain's National Westminster Bank PLC, standing in third place.

Successes in Europe

Europe's banks were not unduly favored by the surge in corporate borrowing in their home market. Citicorp has won the key coordinator role in a $1 billion loan currently being sought by Enimont, an Italian industrial concern.

J.P. Morgan & Co. won prestigious deals like the $1.4 billion loan facility for Bayerische Motorenwerke (BMW), the German automaker. Morgan has also received the mandate to raise $1 billion for West German industrial group Thyssen AG, acting together with Deutsche Bank AG as colead manager.

"U.S. banks, including ourselves are having some notable successes in capturing European loan business which formerly would have undoubtedly gone to European relationship banks, a move definitely helping our rankings this year," said Morgan's Hugh Payton, vice president and loan-syndications head.

Citicorp: Most Active

Citicorp was by far the most active arranger in volume terms, syndicating just over $31 billion or almost double that of its nearest rival, Chemical Bank, with $15.4 billion.

Only two Japanese banks figure among the 20 leading lenders, a big reversal over previous years when Tokyo banks were among the main sources of global loan financing. But U.S. bankers said much of this past clout hinged more on the ability of Japanese lenders to book assets easily than their skills as loan arrangers.

"The Japanese have really pulled back and this has caused big changes in the [loans] market. They now closely scrutinize every loan for profitability, Mr. Payton said. □

This Is Friday, So Expect Tales Of Big Seizure

By TOM LEANDER

NEW YORK — Boston has become the banking industry's rumor hub.

Every Friday – the day the Federal Deposit Insurance Corp. usually seizes troubled financial institutions – whispers abound in Boston that Bank of New England may be targeted for takeover.

The FDIC has declined to comment. And Bank of New England officials said they have reassurances from the agency that such a move is not imminent.

Nevertheless, the rumors fly. They first circulated when the bank announced a $1.1 billion fourth-quarter loss because of massive real estate loan problems. And several recent developments have fed the rumor mill.

ANALYSIS: *Follow-up on the news*

- Two weeks ago, a senior FDIC official predicted that the bank insurance fund could decline by as much as $2 billion this year if real estate problems persist and any large bank fails. Since the FDIC typically takes in $4 billion a year, that would imply losses of about $6 billion. Such a loss could only be produced by the failure of a bank the size of Bank of New England.

- In late June, a horde of FDIC examiners suddenly checked into Boston hotels, registering as employees of a mysterious concern, the Who Co. No one – including the FDIC – has produced an exact number of examiners. Reports have said 100. Some analysts said the total may have reached 300, then declined. At any rate, most agree that too many examiners are on hand for just the takeover of a string of smaller banks.

- Last month, two investment bankers advising major bondholders claimed that a Bank of New England Corp. vice chairman told them "one or more" subsidiary banks were in danger of failing within months. R.T. McNamar has denied he made that statement or that the conversation even took place. Some observers believe the report, however.

Bank of New England Corp. has four subsidiary banks. The obvious target for a seizure would be the flagship Bank of New England unit in Boston, analysts said. It has $15 billion in assets.

Other Subsidiaries Vulnerable

And some have suggested that, simultaneous with a Bank of New England seizure, regulators might take over the $9 bil-

ATM Derby: Diebold, IBM Join Forces

By RICHARD LAYNE

NEW YORK — In a bid to lead the global market for automated teller machines, Diebold Inc. and International Business Machines Corp. have agreed to form a joint company to manufacture and market self-service banking devices worldwide.

The joint venture gives Diebold a substantial marketing presence in the hot European market and access to IBM's research and development, placing the company on at least equal footing with its computer company rivals.

NCR Is the Leader

IBM and Diebold plan to develop a new generation of self-service machines, using advanced technologies that will allow the machines to grant loans and accept bank documents.

Together, the two companies still trail NCR Corp., the worldwide market leader. According to *The Nilson Report*, an industry newsletter, NCR shipped 15,800 units last year, more than double Diebold's 7,301. IBM shipped 2,955 machines. If the joint venture can overtake NCR in the European market, it could

Fed Set to Go Beyond Capital Rules of 1992

By ROBERT M. GARSSON

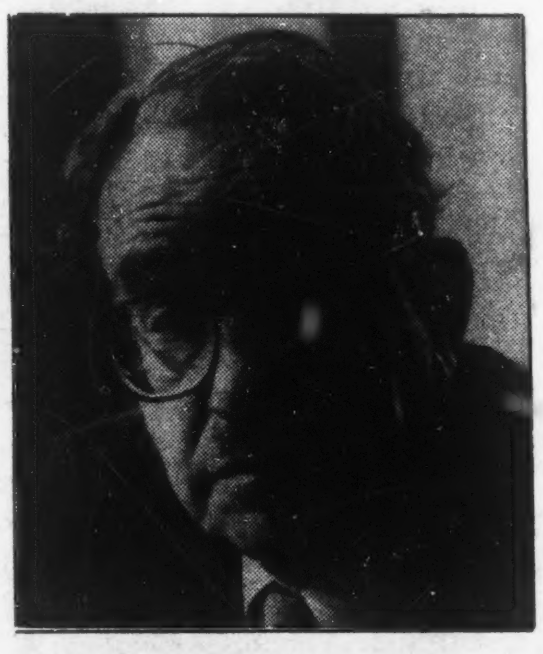
WASHINGTON — The Federal Reserve Board is working on a proposal to require increases in bank capital levels well above the risk-based standards that regulators are phasing in over the next two years, Fed Chairman Alan Greenspan said on Thursday.

In a wide-ranging policy statement before the Senate Banking Committee, Mr. Greenspan did not give specifics on the increase in capital requirements but said they would be "not insignificant" over an extended period.

The minimum would go higher than the 8% ratio of total capital to risk-based assets that the United States and other major countries have agreed to impose by the end of 1992. About 90 of the 100 largest U.S. banks had already hit the 8% level by year-end 1989.

Limits on Expansion

Banks falling short of capital requirements should not be permitted to expand into new lines of business, Mr. Greenspan added, because insufficient capital could threaten the "federal safety net." He said arguments that higher capital standards would place U.S. banks at a disadvantage against international competitors are "short-sighted."



Alan Greenspan
Federal Reserve chairman

"Too many banking organizations, in our judgment, have traveled too far down the road of operating with modest capital levels," he said.

Bank Stocks Driven Down

Mr. Greenspan's threat, made in remarks Thursday morning, to increase the capital burden helped drive down money-center bank stock prices. Chase Manhattan Corp. and Manufacturers Hanover Corp. were off $1 much of the day. Chemical Banking Corp. fell 75 cents to $24.125 in late trading, and Bank of New York fell 62.5 cents to $30.625. Visa, Paying a Fee of $20 Million, Sees Gold in Olympic Sponsorship

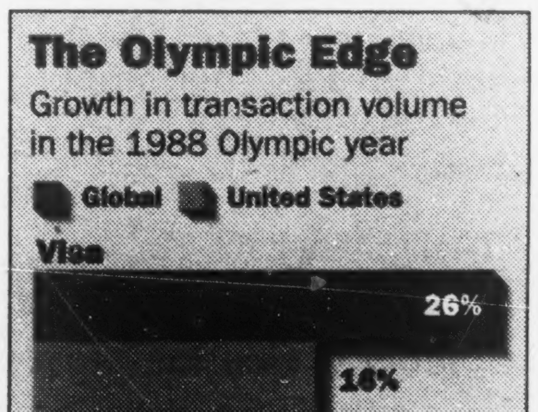
By YVETTE D. KANTROW

NEW YORK – Visa is renewing its corporate sponsorship of the Olympic Games – a strategy that in 1988 proved to be one of the most successful in its history.

The San Mateo, Calif.-based card association plans to sign a pact today making Visa the official card and travelers check for the Games. Visa is paying an estimated $20 million for that privilege and will gain the right to use the Olympics' logo of five-interlocking rings in promotions worldwide.

In addition to the sponsorship fee, Visa International is expected to spend $50 million to $60 million on related advertising and marketing campaigns by the time the 1992 events are completed in Albertville, France, and Barcelona, Spain. Advertising will include television, radio, and print efforts with an Olympics theme, and a number of special promotions.

The Olympic Edge
Growth in transaction volume in the 1988 Olympic year



Source: Company reports; American Express domestic data not available

A Cause-Related Drive

As it did for the last Olympics, Visa will sponsor a major cause-related marketing campaign under which it will make a small contribution to the U.S. team each time one of its payment products is used.

"No one gets the value out of the sponsorship fee that we do," said John H. Bennett, a Visa senior vice president who has been instrumental in aligning the card company with various sports

MNC Foresees Quarterly Loss Of $75 Million

By FRED VOGELSTEIN

Adding to investor fears about the Middle Atlantic commercial real estate market, MNC Financial Inc. announced Thursday that its problem loans would more than double and that it would report a $75 million loss for the second quarter.

The bank said in a press statement revealing preliminary results for the quarter that nonperforming assets rose to $750 million from $359 million and its loss would equal 90 cents a share. It said the loss was primarily due to problem loans for commercial real estate.

Largest in Capital Area

The increase raises the bank's ratio of nonperforming loans to loans outstanding to 5.35%, substantially more than the 2% to 3% that analysts have been considering normal recently. With $25 billion in assets, MNC is the largest banking company in the Baltimore-Washington area.

Analysts and an investor said

Innovator or Outlaw? Focus Is on Utah's Chief Regulator

By TERESA CARSON

LOS ANGELES — Normally, the commissioner of financial institutions for Utah does not spend a lot of time in the national spotlight. But George R. Sutton is grabbing attention because the Office of Thrift Supervision is suing him and because he is breaking ground on interstate banking.

Despite this, the 43-year-old Mr. Sutton is not considered a radical. "He is a fair and innovative regulator. He is not reckless or on the fringe," said David Adams, president and chief executive of the Utah League of Credit Unions, Salt Lake City.

The OTS is suing Mr. Sutton for allowing a thrift to switch to a bank charter without the agency's approval. It accused Mr. Sutton of defying an OTS order to seize Home Savings Bank, Salt Lake City, and instead encouraging the thrift to convert to a commercial bank.

In another case with national implications, Mr. Sutton allowed BankAmerica Corp., San Francisco, to branch into Utah using an Arizona bank charter. This eliminated the need for a separate Utah bank charter and is considered a major step toward interstate branch banking.

George R. Sutton

"I'm not trying to stir the waters," said Mr. Sutton, a native of Salt Lake City who studied philosophy at the University of Utah. But he admitted, "I'm willing to look at the regulatory framework a little differently."

Sutton Has Been a Utah Regulator for 7 Years

Mr. Sutton was appointed to his current post three years ago, after being deputy commissioner for four years. Before becoming a regulator, he worked for two small Salt Lake City law firms, where he specialized in real estate and small business.

As commissioner, Mr. Sutton oversees about 185 financial institutions – banks, thrifts, and credit unions – with about $7.5 billion in assets.

Lawry Alder, executive vice president of the Utah Bankers Association described Mr. Sutton as an accessible regulator. "You might have problems with one regulator trying to regulate several industries," he said. "But George tries to be fair."

Resolving Collapse of Thrift and Loan Industry

Mr. Sutton got a trial by fire as a regulator. When he came to the department in 1983, he said, "the thrift and loan industry and its insurance fund was in a general state of collapse." He and the former commissioner eventually closed six of the state's seven thrift and loans.

Mr. Sutton said he tries to balance his concern for safety and soundness with how financial institutions must respond to changing markets. "The health of a financial institution depends on its ability to operate successfully," he said. "They must compete with less regulated businesses, or we doom them to fail." □

NEWS *briefs*

Torell Is Named Chairman Of Fortune Financial Group

CLEARWATER, Fla. — John R. Torell 3d, a former president of Manufacturers Hanover Corp. and chairman of CalFed Inc., was named chairman of Fortune Financial Group, parent of the $3 billion-asset Fortune Savings Bank.

Mr. Torell, 50, succeeds John A. Moran, who is chairman of Dyson-Kissner Moran Corp., New York. The latter company owns 9.97% of Fortune Financial's stock and has applied to the Office of Thrift Supervision for permission to buy up to 20%. The OTS required Mr. Moran to relinquish his Fortune post as a condition of the stock purchase.

Hove Appointment to FDIC Clears Senate Panel, 19-0

WASHINGTON — The Senate Banking Committee voted 19-0 to recommend that the Senate confirm the nomination of Andrew Hove to the Federal Deposit Insurance Corp. board.

Mr. Hove would fill a seat on the five-member board.

Northeast's Shareholders Approve of Restructuring

HARTFORD, Conn. — Shareholders of Northeast Savings have approved the formation of a holding company, Northeast Federal Corp. The Office of Thrift Supervision supported the move in April as part of a reorganization and capital-raising plan.

MCorp Signs Deal to Sell Waco Bank to Investors

DALLAS — MCorp said it has executed a definitive agreement to sell its interest in MBank Waco to a private investor group led by Gerald J. Ford, an owner of several Texas financial institutions.

MCorp, which is in bankruptcy, owns 100% of MBank Waco, which had $333 million in assets and $329 million in deposits March 31. □

Treasury Fears Home Loan Exits

Sees Threat To Funding Of Bailout

By DEBRA COPE

WASHINGTON — A senior Treasury Department official warned this week that an exodus of thrifts from the Federal Home Loan Bank System could impair the system's ability to contribute to the costs of the thrift bailout.

The warning led the Federal Deposit Insurance Corp. board to postpone a discussion at its meeting Tuesday on whether to permit a Wisconsin thrift to retain FDIC insurance after its planned departure from the Federal Home Loan Bank of Chicago.

State-chartered thrifts have traditionally been members of the Home Loan Bank System, but it is not clear whether membership is required for deposit insurance coverage.

Temptation to Cash In

Membership in the system gives thrifts access to liquidity and other operating services. But with the system's earnings lagging, several thrifts have served notice to regional home loan banks that they wish to cash in their shareholdings and reinvest the money elsewhere.

In a Tuesday letter to FDIC Chairman L. William Seidman, Deputy Treasury Secretary John Robson urged the insurance agency to delay a decision on whether to let Wauwatosa Savings and Loan Association keep FDIC coverage after leaving the Home Loan Bank System.

The $352 million-asset thrift was the first to decide to leave the bank system and is the only one to have formally applied for a dispensation from the FDIC.

Taking Extra Time

Mr. Seidman's top aide, John Bovenzi, said Thursday that the

First Union and Wachovia Increase Profits

By KENNETH CLINE

ATLANTA — First Union Corp. reported its profits rose 5.7% in the second quarter, and First Wachovia Corp. announced an 11% increase.

Meanwhile, NBD Bancorp Inc. reported that second quarter earnings rose 2.9% to $68 million.

First Union, Charlotte, N.C., and Wachovia, Winston-Salem, did not take any special loan loss provisions related to exams by the Office of the Comptroller of the Currency, which have caused serious problems at some other Southeastern banks.

First Union's nonperforming assets rose 23%, to $616 million. The company's results incorporated for the first time the full effects of its January acquisition of Jacksonville-based Florida National Banks of Florida Inc.

Gerard J. O'Meara, an analyst with the Atlanta-based brokerage firm Robinson-Humphrey Co., estimated that 45% of First Union's nonperforming assets derived from Florida National's portfolio.

James M. Rosenberg, an analyst with Shearson Lehman Hutton Inc. in New York, said First Union's nonperformers were "a little higher than expected," but expressed overall approval of the second-quarter numbers.

"First Union has been stalled for several years," Mr. Rosenberg said. "These numbers are beginning to show they're generating a little bit of steam after a long period in the station."

In the first half of the year, First Union earned $149 million, compared with a $146 million in the period a year earlier. The year-ago period included after-tax gains of $6 million, primarily from the sale of mortgage servicing rights.

First Wachovia, long considered one of the Southeast's best-run banks, continued its stellar earnings record despite its OCC exam.

"As expected, the impact [of

COMMENT/*By Philip S. Corwin*

Insurance Powers Arrived In Bits, Pieces over a Decade

The struggle in the past decade to expand insurance opportunities for commercial banks has been arduous. In Congress, particularly, it's been a cliffhanger.

In 1982, Title VI of the Garn-St Germain Act permanently restricted the Federal Reserve's power to permit new insurance activities by bank holding companies. In 1984, the Senate passed the Dodd amendment, which would have barred insurance activities by the two-thirds of state banks in bank holding companies. The measure died, but a one-year moratorium in 1987 froze federal regulatory action on the issue. In 1988, insurance provisions in the Proxmire bill would have both reaffirmed and restricted states' rights. It died, too.

Openings in Present Laws

The role of the American Bankers Association in the turbulent 1980s was to resist anticompetitive legislation while pushing for financial restructuring.

And while no federal law on the subject has been enacted since 1982, the ABA has explored opportunities available under existing law. It has helped individual banks seeking regulatory approval, state banking associations advancing state initiatives, and participants in critical litigation.

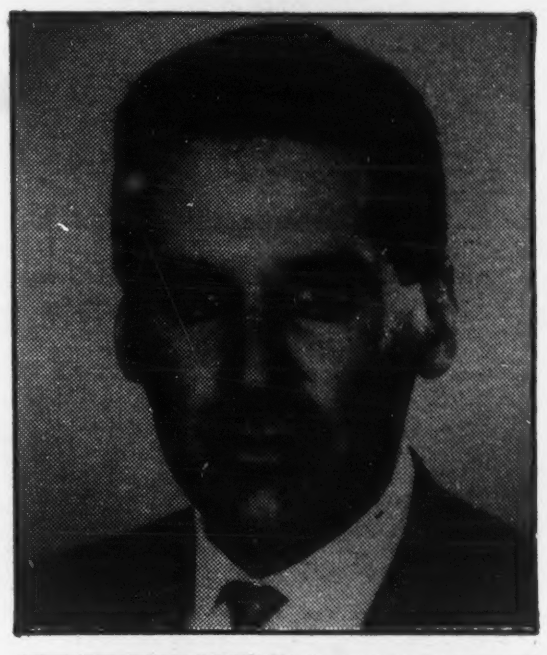
After simmering for years, the insurance powers pot has suddenly boiled over. New avenues have opened to banks seeking enhanced revenues and customer relationships through insurance products and services.

The remainder of this article reviews these new options.

Fixed Annuities Power

Feb. 12, the Office of the Comptroller of the Currency advised Goodhue County National Bank of Red Wing, Minn., that it could sell fixed annuities under the general authority of national banks to broker financial investment instruments.

Though generally marketed as a species of insurance, annuities are not insurance under the National Bank Act because they lack the basic characteristic of indemnification against risk.



The ABA has explored opportunities available under existing law.

An April 1985 ruling by the OCC had allowed national banks to sell variable annuity contracts as securities that may be traded for the account of customers under authority of the Glass-Steagall Act. If the interpretation on fixed annuities withstands legal challenge, national banks will be able to market the full spectrum of annuity products – quite an opening, given that annuities generate about half of all life insurance company premiums.

Publicizing a Distinction

While judging as minimal the risk that customers may confuse annuities with Federal Deposit Insurance Corp.-insured accounts, the OCC nonetheless required full disclosure of this distinction.

Further, before an annuity sale, the bank must obtain a signed customer statement of understanding that the annuity is an obligation of the issuing insurance company and is not FDIC-insured. Also, banks are instructed to determine and fully comply with state laws governing annuity sales.

However, in March 1989, the OCC held that the National Bank Act preempts not only Tennessee's law prohibiting national banks from selling variable-rate annuities but also its statute requiring national bank employees to obtain a state license for such sales.

Hence, it is not clear that the OCC's advice to "fully comply" with applicable state law would include licensing requirements – although variable annuities are securities under federal law and therefore distinguishable from fixed annuities issued by an insurance underwriter.

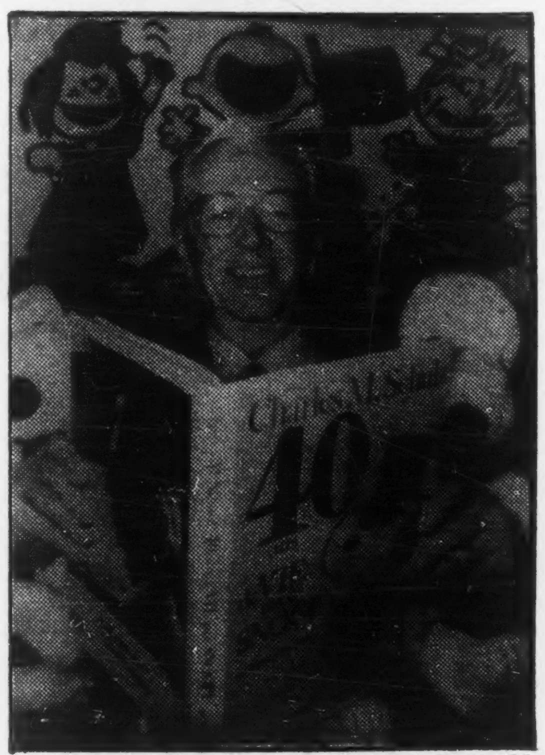
FUNNY MONEY/*By Tom Leander*

Unfunny Papers

A $174,000 lawsuit ain't "Peanuts," even when the defendant is famed cartoonist Charles M. Schulz.

It turns out that the creator of the "Peanuts" comic strip borrowed $174,000 from the ill-starred Penn Square Bank a decade ago – and the bank that took over the loan claims he never made a payment.



AP/Wide World

GOOD GRIEF! A bank is suing cartoonist Charles M. Schulz.

Details of the suit against Mr. Schulz and a dozen other investors were reported late last week by Robin Robinson, writing in the Oklahoma City *Journal Record Press*. According to Ms. Robinson, the investors' group borrowed nearly $1.7 million to participate in a drilling fund, the Copeland Energy 1980 Deep Program Ltd.

The notes were originally due March 1, 1985, but the borrowers apparently renewed them until March 1 of this year. Except for one borrower, who sent $98, they have yet to make any payments of principal or interest on the notes, the Oklahoma newspaper reported.

Penn Square, located in a shopping center in Oklahoma City, collapsed noisily on July 5, 1982. In August 1983 the Federal Deposit Insurance Corp. assigned the notes signed by Mr. Schulz and his coinvestors to Seattle First National Bank, a unit of BankAmerica Corp., which filed suit against Mr. Schulz and the others.

* * *

Chopping Overhead

Yasuda Trust & Banking Co. has found an imaginative way to cut costs, reduce trash, and save trees – all in one stroke.

Yasuda management announced this week that the company cafeteria will switch Aug. 1 to reusable plastic chopsticks.

The firm said it has been going through disposable wooden chopsticks at the rate of 650,000 pairs a year, generating three tons of garbage in the process.

A Yasuda spokesman said a cleaning system will be installed at the cafeteria to wash the new chopsticks at a cost of $6,600 per year. The current size of the bank's chopstick budget was not disclosed.

* * *

Guten Appetit!

East Germans have shown a lusty appetite for capitalist investment vehicles in the few short days since they merged their economy with West Germany through adoption of the western mark as the single currency for both sides.

Citizens of the new, free-market East Germany have invested the equivalent of several million dollars in bonds since July 1. So far, observers say, they have completely shunned the stock market.

Hundreds of financial advisers from East and West Germany are competing to attract business with their investment tips. Along with their appetite for bonds, East Germans are flocking to take advantage of banks that are paying 7.5% on deposits, double the rate paid under the communist regime.

Total East German deposits are estimated at the equivalent of $60 billion. The heavy rate of savings largely reflects the shortage of consumer goods under communism, leavings consumers with little choice but to put their cash in the bank.

— **John Evans**

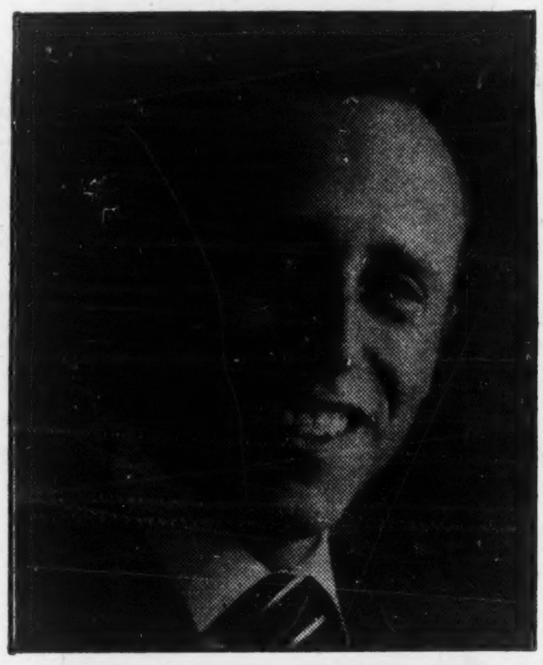
Mistaken Identity

NBC-TV had some egg on its lens the other night when it broadcast a news item about the Office of Thrift Supervision's civil charges against Thomas Spiegel, flamboyant former chairman of Columbia Savings and Loan Association in California.

The network's "Nightly News" program predictably showed a photograph while anchorman Tom Brokaw ran through the OTS charges against Mr. Spiegel: The thrift regulator claimed Mr. Spiegel took an unauthorized bonus and objected to his alleged use of funds from the junk-bond-laden thrift in Beverly Hills; Calif., to pay for personal travel and tickets to a Michael Jackson concert.

But someone at NBC blundered. Instead of showing Mr. Spiegel's photograph, the network flashed a picture of Lawrence K. Fish, former Spiegel associate and ex-president of Columbia Savings.



GOOF: NBC showed Lawrence Fish, not Thomas Spiegel

Mr. Fish, of course, is now lashed to the tiller at Bank of New England Corp., one of the nation's most troubled institutions.

Mr. Fish's institution spotted the error and was able to get it corrected for that night's NBC newscasts to the Rocky Mountain and Pacific time zones. Mr. Brokaw acknowledged the error nationally and set matters straight on July 6.

* * *

A Tiresome Subject

Cost-cutting may be one of the hottest trends in banking, but some executives clearly are not turned on by the subject.

Asked in a recent survey by Trans Data Corp. – a research subsidiary of the *American Banker* – for the most interesting cost-cutting measure that his institution has implemented, one banker responded: "They were all dull."

Banks Gain Momentum in Servicing

Survey Finds Shrinking Share for Thrifts' Servicers

By PHIL ROOSEVELT

NEW YORK — Commercial banks, as part of their broad push in home-mortgage finance, have been posting big gains in the business of servicing mortgages for investors.

An *American Banker* survey has found that bank-affiliated companies accounted for 43% of the servicing handled by the top 100 servicing companies last year, up from 35% just two years earlier. And some of the leading banking concerns in the field continue to post big gains this year.

Thrift-related servicing companies, meanwhile, saw their share drop to 20% from 29% in 1987, reflecting efforts to comply with the capital requirements of the thrift bailout law. Other mortgage companies, including independents and units of industrial concerns, saw their share rise slightly, to 37%.

Top 100 Servicing Companies

A ranking of the top 100 servicing companies, along with a description of their ownership, appears on the following two pages. This annual ranking focuses on mortgage companies and thus excludes a number of thrifts that perform servicing directly rather than through mortgage company subsidiaries.

Mortgage servicing, long the most profitable part of mortgage banking, entails funneling monthly payments from borrowers to investors, handling property tax and insurance payments, and initiating foreclosure proceedings.

The rise of commercial banks in the field, which follows a slide in the mid-1980s, underscores banks' increased role in virtually all areas of mortgage finance.

Rise in Bank Originations

As part of overall strategies to boost consumer banking, many banks have sharply increased their originations of mortgages in the past two years. In June 1989, banks surpassed savings and loans in originations for the first time, as insolvent and capital-short thrifts pulled back.

The ranking excludes thrifts that service directly.

The industry has also posted big increases in its holdings of mortgage-backed securities, encouraged by risk-based capital rules.

Some industry observers say banks' growth in servicing could be slowed by a pending rule to restrict the amount of purchased servicing rights that banks and thrifts can count toward capital.

Opportunity for Nonbanks

The proposal, if enacted, could well cause the mortgage units of nondepository institutions to gain ground. But some leading bank-related companies are still loading up on servicing, both by purchases and through their own originations.

Chase Home Mortgage Corp., for example, expects to be servicing more than $23 billion of mortgages by yearend, up from $14 billion at the end of 1989 and $10.7 billion at the end of 1988. The unit of Chase Manhattan Corp. is a big buyer and recently purchased a $2 billion portfolio from a unit of capital-strapped Crossland Savings.

First Union Mortgage Corp. increased its servicing portfolio to $15.3 billion last year from $10.6 billion. The portfolio should hit around $19 billion by the end of this year, said James Abbott, chief executive of the the First Union Corp. subsidiary.

Megaservicer in the Making

"It has been recognized by our holding-company management that we have the capabilities . . . to be a megaservicer," Mr. Abbott said.

The two mortgage units of Fleet Norstar Financial Group boosted their combined portfolio by 53% last year, to $41.3 billion. By the end of this year, that could hit $50 billion, Fleet officials have indicated. ☐

Realty Brokers Face Cap on Loan Fees

By PHIL ROOSEVELT

Pennsylvania is poised to become the first state to impose a limit on the fees that real estate brokers may charge for helping homebuyers obtain mortgages.

The Pennsylvania Real Estate Commission last month proposed to limit such fees to $100, unless the realty broker holds a license to act as either a mortgage broker or mortgage banker.

The proposal, though still subject to a lengthy review process, has drawn cheers from mortgage banking trade groups in Pennsylvania and elsewhere. These groups have long argued that real estate brokers have a conflict of interest when they take mortgage fees from buyers while earning commissions from sellers.

Cap Called Too Low

But the National Association of Realtors and some lenders said the $100 cap was arbitrary and low.

The proposal "is of tremendous significance," said E. Robert Levy, executive director of the Mortgage Bankers Association of New Jersey and a consultant to the Pennsylvania Mortgage Bankers Association. He said it could give new momentum to efforts to limit the fees on a nationwide basis.

While some states, such as Connecticut, have passed laws requiring that realty brokers' mortgage fees be commensurate with services rendered, several experts said they knew of no other state that has set a cap.

The $100 cap is lower than many observers had expected and well below the fees realty brokers earn under the programs of many lenders. The programs often allow brokers to charge homebuyers a feed of about 1%.

A spokeswoman for Citicorp Mortgage Inc., Citicorp's main mortgage unit, said her company had no objections to the idea of limiting mortgages fees for realty brokers who are neither mortgage brokers or mortgage bankers. But $100 "seems artificially low," she said.

Sally Sciacca, director of mortgage planning and outreach for the National Association of Realtors, echoed that sentiment.

Realty brokers who wish to become mortgage brokers in Pennsylvania must pay an initial fee of $500 and become subject to examinations by the state. If they wish to collect mortgage fees before transactions close, they must post a $100,000 bond or obtain insurance in that amount, a state official said. ☐

Key Interest Rates

	Week ended 7/06/90	Week earlier 6/29/90	Year earlier 7/07/89
30-year fixed-rate mortgage	10.13	10.20	10.17
1-year adjustable-rate mortgage	8.38	8.38	8.88

Rates are based on a weekly survey of 2,000 lending institutions nationwide. The averages reflect rates for a range of loan sizes.

MBA Membership Makes Sense

To more than 2,600 mortgage lenders, servicers, investors and others in the real estate finance industry, membership in the Mortgage Bankers Association of America makes sense. As commercial banks come to the fore in mortgage lending, membership in MBA makes sense for you, too.

MBA provides its members with a voice in Congress and with federal regulators, as well as educational, communications and other business services that help its members manage their businesses more efficiently and more profitably.

MBA is the one organization that offers the real estate finance industry all these benefits and more!

For more information call: Membership Department, Mortgage Bankers Association of America, 202/861-6588.

Ownership of the Top 100 Firms in Mortgage Servicing

The name of parent company as of Dec. 31, 1989, and recent developments

Rank 12/89	Name of Mortgage Servicer	Name of Parent Company	Recent Developments
1	**Citicorp Mortgage, Inc., St. Louis**	Citicorp, New York	
2	**Fireman's Fund Mortgage Corp., Farmington Hills, Mich.**	Fireman's Fund Corp., Novato, Calif.	
3	**GMAC Mortgage Co., Elkins Park, Pa.**	General Motors Acceptance Corp., Detroit	Acquired $5.6 billion in servicing rights during 1989.
4	**Fleet Mortgage Corp., Milwaukee, Wis.**	Fleet/Norstar Financial Group, Inc., Providence, R.I.	
5	**Lomas Mortgage USA, Dallas**	None, independent.	Acquired $3.5 billion in servicing from Bright Mortgage Co.
6	**Fleet Real Estate Funding Corp., Florence, S.C.**	Fleet/Norstar Financial Group, Inc., Providence, R.I.	Acquired Norstar Mortgage Corp.
7	**Metmor Financial, Inc., Overland Park, Kan.**	Metropolitan Life Insurance Co., New York	
8	**First Union Mortgage Corp., Charlotte, N.C.**	First Union Corp., Charlotte, N.C.	
9	**BancBoston Mortgage Companies, Inc., Jacksonville, Fla.**	Bank of Boston Corp.	
10	**Chase Home Mortgage Corp., Tampa, Fla.**	Chase Manhattan Corp., New York	
11	**Shearson Lehman Mortgage Corp., Irvine, Calif.**	Shearson Lehman Hutton, Inc., New York	
12	**Goldome Realty Credit Corp., Buffalo, N.Y.**	Goldome, Buffalo, N.Y.	
13	**Chemical Mortgage Corp., Columbus, Ohio**	Chemical Banking Corp., New York	
14	**Countrywide Funding Corp., Inc., Pasadena, Calif.**	Countrywide Credit Industries, Inc., Pasadena, Calif.	
15	**Weyerhaeuser Mortgage Co., Los Angeles**	Weyerhaeuser Co., Tacoma, Wash.	
16	**Marine Midland Bank NA, Buffalo, N.Y.**	Marine Midland Banks, Inc., Buffalo, N.Y.	Acquired $1 billion in servicing in 1988.
17	**Travelers Mortgage Services, Inc., Cherry Hill, N.J.**	Travelers Corp., Hartford, Conn.	In May, agreed to sell $12 bil. in servicing to GE Mortgage Capital. On 6/28, TMSI reached an agreement to sell its retail production operations to Meridian Mortgage Corp. and to Margaretten & Co.
18	**BancPlus Mortgage Corp., San Antonio, Tex.**	BancPlus Savings Assn., Pasadena, Tex.	
19	**Bowest Corp., La Jolla, Calif.**	Bowest Holding Co., San Diego, Calif.	Acquired $7 bil. portfolio of New York Guardian Mortgagee Corp.
20	**Commonwealth Mortgage of America, L.P., Houston**	Commonwealth Federal Savings Assn., Houston	Parent is in RTC conservatorship. On 4/30/90, Commonwealth sold $1.8 billion of servicing to Houston-based United Savings Association of Texas, the thrift led by mortgage-securities pioneer Lewis S. Ranieri. On 6/21, released plan to unitholders to liquidate and dissolve company.
21	**First Interstate Mortgage Co., Pasadena, Calif.**	First Interstate Bancorp., Los Angeles	
22	**Empire of America Realty Credit Corp., Buffalo, N.Y.**	Empire of America Fed. Savings Bank, Buffalo, N.Y.	
23	**USGI, Inc., Norwalk, Conn.**	None.	Acquired Huntoon, Paige Associates for about $30 mil. on 10/24/89.
24	**Knutson Mortgage Corp., Bloomington, Minn.**	Home Owners Savings Bank, Boston	Acquired $2.6 billion in servicing last year.
25	**Independence One Mortgage Corp., Southfield, Mich.**	Michigan National Corp., Farmington Hills	
26	**Sovran Mortgage Corp., Richmond**	Sovran Financial Corp., Norfolk, Va.	
27	**Southeast Mortgage Co., Miami**	Southeast Banking Corp., Miami	Selling $6.4 bil. in servicing to 36th-ranked Sears Mortgage.
28	**Foster Mortgage Corp., Fort Worth, Tex.**	Benjamin Franklin Savings Assn., Houston	Negotiations are under way for the acquisition of the company.
29	**Barnett Mortgage Company, Jacksonville, Fla.**	Barnett Banks, Inc., Jacksonville	
30	**Waterfield Mortgage Co., Inc., Fort Wayne, Ind.**	None, independent.	
31	**National Mortgage Co., Memphis, Tenn.**	None, independent.	
32	**Barclays American/Mortgage Corp., Charlotte, N.C.**	Barclays American Corp., Charlotte, N.C.	Acquired over $2 billion in servicing rights over the last half of 1989.
33	**Imco Realty Services Inc., Santa Rosa, Calif.**	Owned by a limited partnership.	
34	**Midland Mortgage Co., Oklahoma City**	Midland Financial Co., Oklahoma City	
35	**Anchor Mortgage Services, Inc., Wayne, N.J.**	Anchor Savings Bank FSB, Northport, N.Y.	
36	**Sears Mortgage Corp., Riverwoods, Ill.**	Sears Roebuck & Co., Chicago	Agrred to but $6.4 bil. portfolio from 27th-ranked Southeast Mortgage.
37	**Bank of America NT&SA, San Francisco**	BankAmerica Corp., San Francisco	
38	**Associated National Mortgage Corp., Irving, Tex.**	Ford Motor Co., Dearborn, Mich.	Gulf + Western, Inc. sold company to Ford in Oct. 1989. Immediate parent company is Associated Real Estate Financial Services Co., Inc.
39	**CrossLand Mortgage Corp., Salt Lake City**	CrossLand Savings FSB, Brooklyn, New York	
40	**Troy & Nichols, Inc., Monroe, La.**	Southwest Savings Assn., Dallas	
41	**J.I. Kislak Mortgage Service Corp., Miami**	J.I. Kislak, Inc., Miami	Acquired $788 million in servicing last year.
42	**Sunbelt National Mortgage Corp., Dallas**	Sunbelt Savings FSB, Dallas	
43	**Dorman & Wilson, Inc., White Plains, N.Y.**	None, independent.	
44	**ARCS Mortgage, Inc., Canoga Park, Calif.**	Bank of New York Co., Inc.	
45	**Talman Home Mortgage Corp., Chicago**	Talman Home Federal Savings & Loan Assn., Chicago	
46	**Alliance Mortgage Co., Jacksonville, Fla.**	Bridges, Minchew & Wheeler, Savannah, Ga.	Company was sold by Owens-Illinois, Inc., Toledo, Ohio.
47	**Banc One Mortgage Corp., Indianapolis**	Banc One Corp., Columbus, Ohio	Acquired servicing portfolio of Weaver Brothers, Chevy Chase, Md., 10/89.
48	**Paine Webber Mortgage Finance, Inc., Columbia, Md.**	PaineWebber, Inc., New York	
49	**National City Mortgage Co., Miamisburg, Ohio**	National City Corp., Cleveland	Formerly Shawmut Mortgage Corp. Merged BancOhio Mortgage Co., a sister company with $728 million in servicing (16,800 loans) 12/1/89. And it purchased $989 million (17,000 loans) from First National Bank, Louisville, another affiliate 10/1/89.
50	**U.S. Bancorp Mortgage Co., Portland, Ore.**	U.S. Bancorp., Inc., Portland, Ore.	
51	**Coldwell Banker Real Estate Fin. Ser., El Segundo, Calif.**	Sears Roebuck & Co., Chicago	Acquired Sears Savings Bank's commercial loan serviciing portfolio.
52	**Lincoln Service Corp., Owensboro, Ky.**	Great Financial Federal Savings & Loan Assn., Louisville	
53	**SunTrust Mortgage, Inc., Atlanta**	SunTrust Banks, Inc., Atlanta	
54	**BancNewEngland Mortgage Co., Inc., East Providence, R.I.**	Bank of New England Corp., Boston	Formerly known as BNE Mortgage Corp.
55	**Commonwealth Mortgage Co., Wellesley Hills, Mass.**	None, independent.	
56	**Security Pacific National Bank, Los Angeles**	Security Pacific Corp., Los Angeles	
57	**Shawmut Mortgage Co., West Hartford, Conn.**	Shawmut National Corp., Hartford, Conn.	Acquired Shawmut Bank's $942 million servicing portfolio.
58	**Dominion Bankshares Mortgage Corp., Fairfax, Va.**	Dominion Bankshares Corp., Roanoke, Va.	
59	**Commercial Federal Mortgage Corp., Omaha, Neb.**	Commercial Federal Savings & Loan Assn., Omaha, Neb.	Acquired $469 million in servicing last year (10,426 loans).
60	**Metropolitan Financial Mortgage Corp., St. Paul, Minn.**	Metropolitan Federal Bank, Fargo, N.D.	Formerly known as Rothschild Financial Corp.
61	**Murray Mortgage Co., Dallas**	Murray Savings Assn., Dallas	
62	**CitFed Mortgage Corp. of America, Dayton, Ohio**	Citizens Federal S & L Assn. of Dayton, Ohio	
63	**American Home Funding, Inc., Richmond**	Rochester Community Savings Bank, N.Y.	
64	**First Wachovia Mortgage Co., Winston-Salem, N.C.**	First Wachovia Corp., Winston-Salem, N.C.	
65	**United Mortgage Corp., Minneapolis**	Midwest Savings Assn. FA, Minneapolis	Parent is in RTC conservatorship, and United is in the process of being sold.
66	**C&S Real Estate Services, Inc., Tucker, Ga.**	Citizens & Southern Corp., Atlanta	
67	**York Associates Inc., Bethesda, Md.**	None, independent.	
68	**M-West Mortgage Corp., Orange, Calif.**	None, independent.	Formerly known as Meritor Mortgage Corp.-West.

Home Loan Exits Feared as Threat to Bailout Funding

Continued from *page* **2**

FDIC board intends to address the Wauwatosa application in two to three weeks.

"Because there's such interest and concern about this issue, the board is just taking the opportunity to hear more views," he said.

He added that the review focuses on legal issues and whether exits pose any threat to the safety and soundness of the banking system.

Mr. Robson said departures could impair the Home Loan banks' ability to pay interest expenses on bonds issued by the Resolution Funding Corp. to finance the bailout. Under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the 12 Home Loan banks may be tapped for up to $300 million per year to cover those interest costs.

Arthur Siddon, a Treasury spokesman, said Mr. Robson suggested that exits should be limited during a transition period. Mr. Siddon, who confirmed the contents of the letter to Mr. Seidman, did not elaborate. Mr. Robson was unavailable for comment.

Eight Petitions to Quit

Wauwatosa's exit application, filed last September and made public in March, was followed by several others in the Chicago, Des Moines, and San Francisco Home Loan bank districts. By June 25, eight state-chartered thrifts insured by the FDIC's Savings Association Insurance Fund had petitioned to leave, asserting that they have no legal obligation to remain in the system.

The controversy has forced the FDIC to become the reluctant arbiter in a public policy debate that may reshape the Federal Home Loan Bank System.

"It's an emotionally charged policy issue," said the FDIC deputy general counsel, Douglas Jones.

While the FDIC studies the implications, the Home Loan banks face mounting pressure on earnings because of shrinking membership and slack demand for advances.

1,085 Departures Feared

If the FDIC permits departing state-chartered thrifts to continue their insurance, the doors could open for as many as 1,085 thrifts to leave, taking with them 19% of the bank system's capital, the Federal Housing Finance Board has told the FDIC. The board is the overseer of the home loan banks.

Federally chartered thrifts are clearly required to belong to the bank system, but the Housing Finance Board has raised the prospect that these institutions could convert to state charters to escape.

> **"If a little Midwestern savings and loan can destroy the system, then the system ought to be destroyed."**
>
> **Raymond J. Perry**
> *Wauwatosa Savings and Loan Association*

Worries Called Exaggerated

Wauwatosa's president and chief executive said concerns about wholesale exits from the bank system are exaggerated. "If more people were inclined to go, they would be in line by now," said Raymond J. Perry.

He said Wauwatosa wants to quit the system because it does not borrow from the advance window and could reinvest its $3 million stock subscription more profitably in loans to the community.

"I think there's a place for the system," Mr. Perry added. "But if [the withdrawal of] a little Midwestern savings and loan can destroy the system, then the system ought to be destroyed as a useless appendage of government."

But a Housing Finance Board official, speaking on background, said it is possible that more thrifts will petition to leave. "The question is how quickly the line will form if the FDIC lets them out," this official said.

The House Banking Committee chairman, Rep. Henry B. Gonzalez, opposes the exit bids. "The overriding thing in last year's bailout bill was that the S&L industry would have to pay as much of the cost as possible," said Jake Lewis, an aide to the Texas Democrat. "No one was going to escape this obligation to help bail themselves out." ☐

Chase in Deal To Service Loans

NEW YORK — A unit of Chase Manhattan Corp. has purchased the rights to service about $2 billion of home loans from a subsidiary of capital-strapped Crossland Savings.

Officials at Chase and Crossland confirmed rumors of the deal, but information on terms was not immediately available.

Market sources pointed to the transaction as a prime example of how banks are gaining ground in all aspects of mortgage finance as the thrift industry struggles to meet the requirements of the 1989 bailout law.

Chase Home Mortgage Corp., based in Tampa, Fla., is one of the nation's 10 largest servicing companies. At the end of 1989, it was servicing about $14 billion of loans for investors.

A spokesman for New York-based Crossland said the thrift's mortgage unit routinely sells some servicing rights. He said the sale to Chase was not designed to help the thrift meet new capital rules "but it certainly helps." ☐

Get clear direction on how to make returned check imaging succeed.

Can digitized imaging of checks contribute as much to your bank's profitability as to back office productivity?

Trans Data has investigated the technology top to bottom. Consumer receptivity. How fees can generate income. How depositors' concerns can be overcome. When and how other banks will offer this service. Then, in a second phase, we took a hard look at how imaging can boost the quality of your service and increase back office profitability.

Now you can look at the answers before you put your bank to the test.

Make a cool analysis of a hot topic.

When digital images replace returned checks, you ask customers to accept a radically new way of doing business with your bank.

Trans Data's recently completed studies outline what the impact will be on consumers and your relationship with them. There's no clearer or faster way to understand all the marketing implications.

We've learned how willing customers are to pay for the service...and how much. They've told us how this technology may affect your image. And whether they'll switch their business to a bank that implements the technology before you do.

The savings begin immediately.

Mounting your own studies of technology and consumer attitudes could cost tens of thousands of dollars and valuable months of lead time.

But Trans Data, backed by a decade of rigorous experience in banking research, has anticipated your needs. Our already prepared studies are available immediately. So call now.

We'll point you in the direction of the best returns from returned check imaging.

Illinois Opening Leaves Acquirers Unenthusiastic

By NANINE ALEXANDER

CHICAGO — Illinois will open its doors to full interstate banking on Dec. 1, but so far no acquirers are waiting in line.

As the trigger date nears, banks from outside the Midwest have yet to stake any claims in the Land of Lincoln. Stocks of Illinois-based banks are rallying less than expected in anticipation of potential acquisitions.

Analysts attributed the lack of activity mainly to the high price expectations of Illinois bankers and the preoccupations of potential buyers with their own asset quality and battered share prices.

Illinois banks "all have this notion of selling for three times book," said Stuart I. Greenbaum, banking professor at Northwestern University's Kellogg Graduate School of Management. "They all need a reality transplant," Mr. Greenbaum said.

ANALYSIS: *Follow-up on the news*

"Either premiums are going to come down or there's going to be a lot less activity than anticipated," said Henry C. Dickson of McDonald & Company Securities, Cleveland.

Regulatory Inhibitions

Price are not the only factors keeping merger activity dormant, said Joseph F. LaManna, bank analyst for William Biair & Co., Chicago. The current regulatory climate has made acquirers reluctant to buy anything that has not been throughly scrutinized by bank examiners.

The thrift alternative may also be discouraging some potential bank mergers, said David D. Olson, senior vice president and an investment banker for Donaldson, Lufkin & Jenrette Inc., based in Chicago. Banks that already have a presence in Illinois and wish to expand may find it more attractive to acquire a thrift with federal assistance, gaining clean assets, market share, and deposits for a modest premium.

Sooner or later, though, banking companies with nationwide aspirations are expected to enter the Illinois market – particularly Chicago.

"If you're going to have a national franchise, you can't ignore Chicago," said Michael Milunovich, analyst with Robert W. Baird & Co., Milwaukee.

Easy Market to Enter

Illinois is a relatively easy market to enter. No banking

House Chiefs Ask Stiff S&L Crime Terms

By ROBERT M. GARSSON

WASHINGTON — The House Democratic leadership rallied Wednesday behind legislation that would stiffen penalties for bank-related crimes and establish a national commission to investigate what caused the savings and loan crisis.

The legislation, sponsored by Rep. Charles E. Schumer, D-N.Y., was to be offered late Wednesday or early today as an amendment to the crime bill now before the House Judiciary Committee. The bill could be on the House floor as early as next week.

Foley, Gephardt Backing

Mr. Schumer's package gained the backing of House Speaker Thomas S. Foley, D-Wash., and Majority Leader Richard Gephardt, D-Mo., who appeared at a press conference to demonstrate Democratic solidarity. The initiative is the party's effort to recapture the moral high ground as Congress and the Republican administration jockey over who is doing the most to resolve the S&L crisis.

Recently, President Bush held what amounted to a pep talk for U.S. attorneys and pledged new resources to prosecute crimes against S&Ls. The Senate followed last week with legislation that would permit life sentences for the worst offenders, the so-called S&L kingpins.

Mr. Schumer said the 30-year prison terms mandated in his bill are "plenty tough."

In a thinly veiled criticism of the Senate provision, Mr.

Greenspan Hints Fed May Cut Rates Again

By LINDA CORMAN

WASHINGTON — The tightening of bank credit that prompted the Federal Reserve to reduce short-term interest rates last week is likely to continue, and may lead to further easing by the central bank, Fed Chairman Alan Greenspan said Wednesday.

In his most detailed assessment of the purported credit crunch and the recent effort to counteract it in monetary policy, Mr. Greenspan said the drop in the overnight fed funds rate may not have been sufficient to overcome the perception of tight credit.

More 'Scrutiny' Ahead

"The process of credit restraint may not have reached completion, and some of its effects may not yet have been

See **GREENSPAN** *page* **26**

Greenspan's Main Points

- ☞ Banks in recent weeks may have "slipped over the line" to overly restrictive lending standards
- ☞ Bank lending may get tighter before easing
- ☞ There is "no real basis" to expect a repeat of the S&L crisis in commercial banking
- ☞ Economic slowdown remains unlikely, but there has been "a shade tilt toward a recession"

Yields Rise on Bank Debt

By KELLEY HOLLAND

NEW YORK — A spate of disappointing second-quarter earnings figures sent the yields on bank debt rising in recent days, continuing their upward trend of the past two weeks.

The increase in yields could mean a rise in cost of funds for many large banks, a looming problem at a time when regulatory pressure could warrant additional capital requirements beyond the 1992 risk-based capital guidelines.

"As things stand now, the risk for all banks is that getting capital is going to be increasingly expensive going forward," said Andrew J. Cooley, a managing director at Merrill Lynch Capital Markets. "As loan quality suffers, so do bond prices in the marketplace."

Market May Be Unfriendly

Admittedly, the change has no immediate effect on banks' funding costs. But in light of Federal Reserve Chairman Alan Greenspan's comments last week and again on Wednesday in which he advocated higher capital requirements, banks may be forced to step back into a po-

Trust Areas Gained Some Glitter in '89

By RICHARD LAYNE

NEW YORK — Growth in large U.S. banks' trust income and assets bounced back last year after sputtering in 1988, indicating that the leading institutions are succeeding in their search for profits from the once sleepy function.

The 1989 increases – 12.4% in income and 19.3% in discretionary assets at the 100 largest trust banks – marked a return to the growth rates of the mid-1980s, according to the *American Banker*'s annual trust survey. The industry recovered from 1988 growth rates of about 4% for both assets and income that occurred in the aftermath of the 1987 stock market crash.

Growth in the market value of trust assets was 30% or more at

COMMENT/*By Stephen H. Axilrod*

Fed, Despite Recent Easing, Keeps Brakes on Inflation

The Federal Reserve Board has eased monetary policy a notch in an effort to offset credit tightening at banks and other depository institutions. That was the clear implication of Fed Chairman Alan Greenspan's testimony last week at the Senate Banking Committee hearing on bank capital, confirmed at Wednesday's monetary policy hearing.

As indicated in last month's column, the weakness of money supply over the past few months suggested that the Fed might in practice – given the change in institutional lending attitudes – have restrained the bank reserve base, and hence the money supply, more than it intended. In that case, it would be quite natural to provide more reserves and let the money market ease a bit further.

The expected result would be more accommodative market conditions and more liquidity in the hands of the public, helping to offset the reduced accommodation and greater desire for liquidity at banks.

The recent easing does not represent any lessening in the Fed's continuing effort to constrain inflation. So long as the money supply (particularly the M2 version) is not running high in the Fed's longer-run target ranges, the Fed remains on a rather restrictive course.

Elusive Money Trends

Such a statement about the money supply sounds more unequivocal than it should. Money trends in the aggregate are fiendishly difficult to interpret, as everyone knows by now. They cannot be judged without also looking at the velocity of money, which itself depends on interest rates (representing the cost of investment alternatives to money) and also on public attitudes independent of interest rates.

If velocity showed an independent tendency to rise sharply, that could indicate an increase in inflationary expectations and a flight away from money. If turnover showed an independent tendency to decline sharply, that could indicate the public wants a lot more liquidity for cautionary reasons (as occurred temporarily after the October 1987 market crash).

In current conditions – with velocity not showing unusual independent tendencies – it seems reasonable to interpret sluggish growth in money as indicating that monetary policy had become a little tighter than intended. That is by no means a reversion to the monetary targeting of the early '80s, but it does suggest that money cannot be, and is not being, entirely ignored in monetary policy operations.

This recent episode also brings up the vexing question of the relationship between regulatory and monetary policies. Ideally, they should be quite separate. That is, the economic objectives of monetary policy should not be influenced by regulatory policies to assure the soundness of individual institutions and the banking system.

But the implementation of monetary policy has to take into account how banks are responding within an existing economic and regulatory environment.

Regulatory decisions affecting the conduct of banking should be based on the nation's goals for a competitive, safe banking system – not on the needs of monetary policy. The U.S. banking system is clearly in need of more, not less, scope for operations in light of the evident globalization of finance.

I do not necessarily mean that the banks should be charging into the securities business, where competition is already fierce and profit opportunities limited. Nor do I mean that bank capital standards here are too high. Given the loan experience of the past several years, they surely are not.

U.S. banks are at a disadvantage in size. They cannot accumulate capital and deposits to compete effectively against the truly nationwide banks of other major countries.

Limitations on interstate banking here are eroding, but it would be a great help if they eroded faster, with a little congressional push. The European Community's banking directive will let banks chartered in one country operate in other countries of the community.

It should not be beyond the wit of the more culturally integrated United States, which already has national banking authority, to move more rapidly toward nationwide banking – before all the good international markets are gobbled up by the growing banks of Europe and Asia. □

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

THE LOBBYISTS

Kennedy Bill Would Tax the Wealthy To Fund S&L Bailout

The **Financial Democracy Campaign,** a loose coalition of labor, consumer, church, and organizations, begins lobbying today for a bill that would tax the wealthy to pay for the savings and loan cleanup.

The coalition formed last year in response to the mounting cost of the S&L bailout to U.S. taxpayers. Among its victories was an amendment sponsored by **Rep. Joseph P. Kennedy 2d,** D-Mass., that beefed up anti-redlining laws. Another, sponsored by **Rep. Henry B. Gonzalez,** D-Tex., created industry-financed low-income housing.

A defeat came on a separate Kennedy proposal to finance the bailout with a special tax. This year, however, the coalition believes a new effort, also led by Rep. Kennedy, has a shot at making it to the President's desk.

"The environment has really changed," said **Steve Kest,** executive director of the **Association of Community Organizations for Reform Now,** or Acorn, which took a lead in forming the Financial Democracy Campaign. "People are extremely angry over the cost of the bailout."

Rep. Kennedy was scheduled to announce his new initiative this morning, at a press conference attended by representatives of the Financial Democracy Campaign and consumer advocate **Ralph Nader.**

Acorn is known for its confrontational tactics. Earlier this week, the group demonstrated outside the Chicago headquarters of the **U.S. League of Savings Institutions.** After U.S. League president **Frederick Webber** finally invited representatives up to talk, Mr. Kest presented him with a bill for $1.4 trillion – his estimate of the cost of the bailout.

Housing Groups Fight FHA Overhaul

An omnibus housing bill advancing to the House floor as early as today has mortgage insurers and housing industry groups squaring off over a Bush administration plan to revamp the government's flagship home-ownership program.

Girding themselves for battle with the **Mortgage Insurance Companies of America,** home builders, mortgage bankers, and Realtors have lined up support for an alternative Federal Housing Administration reform proposal to be offered by **Rep. Bruce Vento,** D.-Minn., **and Rep. Thomas Ridge,** R.-Pa.

Growing losses are consuming the capital of FHA's mutual mortgage insurance fund, prompting Housing and Urban Development Secretary **Jack Kemp** to warn that the fund backing nearly $300 billion of single-family mortgages could be broke by the end of the decade. Now all the players are picking through a report by **Price-Waterhouse,** the accounting firm that examined ways to restore the FHA program to financial health, for clues on how to stop the fund's slide.

A plan was assembled by the Bush administration to levy risk-based mortgage insurance premiums and end financing of most closing costs. Approved by the Senate in late June, it would increase the FHA's current 3.8% mortgage insurance premium on principal to as much as 7.6% for borrowers who put down less than 5% on a home. The borrowers would pay supplemental annual premiums for up to 15 years.

S. Hutchinson

Mortgage insurers – still smarting over a measure enacted last year that raised the FHA single-family loan limit to $124,875 – favor the plan, saying it would ward off foreclosures. "This isn't a matter of just putting people into homes; you have to keep them there," said **Suzanne Hutchinson,** executive vice president of the mortgage insurers' group.

The **Mortgage Bankers Association,** the **National Association of Home Builders,** and the **National Association of Realtors** disagree. They say the plan would put home ownership out of reach for up to 100,000 families a year. They endorse the Vento-Ridge alternative, which drops the initial premium to 1.35% but requires all borrowers to pay an extra 0.5% annual premium.

And now **Consumers Union** has taken up their cause. "The Vento-Ridge proposal shows that we can save the program without killing the dreams of first-time homebuyers in the process," said **Michelle Meier,** government affairs counsel.

The housing industry groups asked Price Waterhouse to reassess the fund's health using cheerier assumptions. Price Waterhouse acknowledged that interest rate, unemployment, house appreciation, and inflation scenarios and policy initiatives suggested by the groups add up to a more robust FHA.

IRS Proposal Would Tax S&Ls' Bad-Debt Reserves

Healthy thrifts that back away from real estate lending or switch to commercial bank charters, beware: A tax-hungry Internal Revenue Service is eyeing your bad-debt reserves.

Mark Riedy

The **National Council of Savings Institutions** warns that some thrifts may be taxed into insolvency by an IRS ruling that could drain them of more than 30% of capital. **Mark Riedy,** the trade group's president, and **James O'Connor,** its vice president for tax, will take on the IRS position at a briefing Tuesday.

For decades, the government has stimulated mortgage lending by permitting thrifts to cushion themselves against future loan losses by deducting bad-debt reserves from income. Now the IRS is tightening the rules that trigger a recapture of the subsidy, pulling into its revenue stream the bad-debt reserves of thrifts that obtain commercial bank charters or whose residential mortgage lending drops below 60%, the National Council of Savings Institutions says.

	TOTALS FOR THE TOP 100 FIRMS[1]	**$1,375.8 Bil.**	**$1,153.1 Bil.†**	**+19.3%**			

Data Source: American Banker survey of the largest commercial banking companies and nondeposit trust companies in the nation. **Discretionary assets:** assets of accounts over which a firm is authorized to make investment decisions. Includes assets in accounts for which the firm recommends, but does not make, investments. Also included are assets of accounts where the firm shares investment power. **Trust Inc. Rank:** The rank based on gross trust and custodian income for 1989. **Asset rank 1989:** The rank based on the total assets of the commercial holding company as of 12/31/89. **(a)**— The 1988 data do not include Irving Bank Corp., acquired 12/88. **(b)**— The 1989 data include NCNB Texas National Bank, and the 1988 data do not. NCNB Texas— which became a subsidiary of the NCNB Corp. in Aug. 1989— ranked 21st in 1988 with $16.3 billion in managed assets. **(c)**— The 1989 data does not include MVestment Corp., which was acquired from MCorp. MVestment Corp.— now called Ameritrust Texas— had $6.9 billion in managed assets last year, ranking MCorp 53d in this year's listing. Had the consolidation taken place at yearend, Ameritrust Corp. would have ranked 20th with $21.2 billion in assets. **(d)**— On March 5, CoreStates acquired First Pennsylvania. Had the merger taken place at yearend, CoreStates would have ranked 21st with $20.9 billion in assets. **(e)**— All trust activities are performed by Security Trust Co. NA, Washington, D.C. **(f)**— MNC acquired Equitable Bancorp., Baltimore, on Jan. 18. Had the merger taken place at yearend, MNC would have ranked 41st with $9.7 billion in assets. **(g)**— On Jan. 29, First Union Corp. acquired Florida National Banks of Florida. Had merger taken place on Dec. 31, First Union would rank 39th with $10.4 billion in assets. **(h)**— Became a holding company in 1989. In 1988, data for two group members were reported: Bessemer Trust Co. NA, New York ranked 72d with $3 billion in assets and Bessemer Trust Co., Woodbridge, N.J. ranked 86th with $2.1 billion in assets. **(i)**— Data are for MVestment Corp. MCorp sold MVestment Corp., its trust subsidiary, to Ameritrust Corp. for $105 million in cash and $15 million in a 5-year, interest-bearing note. **(j)**— Society Corp. acquired Trustcorp on Jan. 5. Had the merger taken place at yearend, Society would have ranked 37th with $10.95 billion in managed assets. **(†)**— Revised since publication on 6/27/89. **(‡)**— Rank firm would have had, if revised data had been received earlier. **(•)**— Data and rank are pro forma. Company was formed 1/30/89. **(1)**— The 1988 total is for the top 100 firms that year. **(B)**— Bank not contolled by a U.S. bank holding company. **(M)**— A multibank holding company. **(O)**— A one-bank holding company. **(T)**— Trust company not contolled by a U.S. bank holding company.

Trust Business Emerged From Doldrums Last Year

Continued from *page* **1**

some of the top banks, reflecting a shakeout similar to that in other banking businesses such as credit cards and mortgage servicing.

According to the *American Banker* trust ranking, Bankers Trust New York Corp., the perennial leader in discretionary trust assets, remained on top, with a 29% increase to $104 billion on Dec. 31. (See tables beginning on page 8.)

Citicorp displaced J.P. Morgan & Co. as the leader in total trust income, jumping 6% to $477 million while Morgan declined 2% to $446 million.

The Bank of New York Co. and NCNB Corp. made big gains in the top 100 rankings in terms of both assets and income as they consolidated the activities of acquired banks.

At many of the largest banks, trust income is increasing as a percentage of total operating income. Meanwhile, they find themselves in an increasingly competitive market, particularly in personal trust, in which their investment management must outperform brokerage companies and insurance companies.

Some Becoming Selective

Price slashing and consolidation are causing the big to get bigger, and some banks are becoming selective by exiting some aspects of corporate trust and personal trust.

Citicorp rose to the top spot in trust income – it was seventh in assets with $45.7 billion – even though it dropped two trust businesses two years ago.

One of the beneficiaries of consolidation is Bankers Trust, which has acquired significant trust businesses in the past three years from Bank of California, European American Bank, and Wells Fargo & Co. Last year, Bankers Trust became the first bank to surpass $100 billion in the market value of discretionary assets.

"We are getting requests for proposals to acquire other businesses," said B.J. Kingdon, senior vice president at Bankers Trust. "Some of the players in this field are looking to drop out. Either you are in it in a big way or you are just another player."

"We expect that consolidation will continue, as it will in all areas of U.S. banking," said John S. Sutfin, executive vice president of Northern Trust, which ranked ninth in assets and eighth in income.

Top Tier Rule Internationally

Bankers and industry observers say there is room for competition on a regional level, but not on the national and international level where the top tier of banks dominate and where the required investment in technology is enormous.

Seven of this year's top 10 trust providers earned a higher percentage of their income from trust fees in 1989 than in 1985, according the *American Banker* statistics. That growth is evidence that trust departments are meeting bankers' expectations in generating fees to offset the dwindling returns from commercial lending.

"We are seeing the resurgence of a business that in the darling days of commercial lending was yesterday's act," said Robert M. Boyles, executive vice president at Mellon Bank Corp., another of the top 10 trust banks. Behind that resurgence, bankers say, is the fundamental strength of the trust business: No capital reserves are needed, risk is low, and earnings growth is steady, although computer and communications expenditures can be substantial.

No Room at the Top

Those fundamentals may seem attractive to many banks,

We take the time to monitor international developments–
so you don't have to

The world moves so rapidly few people have the time to analyze every economic and political change. That's why so many investors seeking investment opportunities around the world choose The International Fund (TIF) for Institutions.

From the stock market in Singapore to developments in Denmark, the Fund's manager, Kleinwort Benson International Investment Ltd., analyzes daily economic, political and stock market events. Commanding a leading presence in the world's financial centers, Kleinwort Benson enjoys the advantage of receiving timely, accurate news of all financial developments the world over.

To ensure TIF investors the peace of mind of being fully informed, the Institutional Funds Group (IFG) compiles and distributes this information in comprehensive quarterly updates. And every month, investors receive current performance information and a detailed portfolio analysis.

More importantly though, investors in TIF receive a high level of personal attention–with direct access to IFG representatives *and* U.S.-based Kleinwort Benson client officers. Investors also have the opportunity to meet with The International Fund's portfolio managers, who regularly visit the U.S.

It's time you called 1-800-221-8120

We'll send you a current Fund prospectus containing more complete information, including charges and expenses. The prospectus should be read carefully before investing.

Data Source: American Banker survey questionnaire mailed to the largest trust firms in the nation. **Number of subsidiaries engaged in trust activity:** *American Banker* asked respondents to indicate the number of commercial bank subsidiaries, nondeposit trust companies, affiliated investment adviser subsidiaries, and all other subsidiaries engaged in trust activities in 1989. The number shown is the sum of all these subsidiaries. **Affiliated Investment Adviser Subsidiaries:** This column indicates whether or not the firm has an affiliated investment advisor subsidiary or subsidiaries. "Yes" indicates the firm has such a subsidiary and "No" indicates it does not. **N.A.**— If a firm did not respond to the *American Banker* questionnaire, it was sent a mailgram version of the survey questionnaire. The mailgram did not ask for the number of subsidiaries engaged in trust activities. Thus, for these firms, the data are not available. **(1)**— Sold First Chicago Investment Advisors in 1989. **(2)**— Its parent, the Boston Co., has four affiliated investment advisers managing $16.2 billion in trust assets.

Consolidation Helps Big Banks Reap Profits from Trust Area

Continued from *page* **9**

but the chance of reaching the top rung of global corporate and institutional trust providers is slim. The best chances for growth are at banks that are concentrating on personal trust and on regional markets, say industry observers.

"Are we going to compete with Bankers Trust?" asked Steven D. Poole, senior vice president at NCNB. "No, instead of calling on the Fortune 500, we will drop down to the corporate 2,000."

"We see more interest [in trust] on the part of banks, but the top-tier competitors remain the same," said Mr. Sutfin of Northern Trust. The Chicago institution gets 55% of total revenues from fees, and 90% of the fees stem from its trust business. Discretionary assets rose 32% at Northern Trust in 1989.

Other major trust banks such as State Street Boston Corp., which increased assets 44% last year, and Wells Fargo, which was No. 3 on the asset list, derive most if not all of their trust income from corporate and institutional customers.

Technology Commitment

Entering and staying in the elite requires a major commitment to technology and personnel. Some trust banks are committing upward of $40 million to build new computer systems. Mellon, for example, is investing $30 million to upgrade its systems. NCNB executives have committed $22 million to build a new trust system.

Some trust banks are committing upward of $40 million for new computer systems.

A study by the consulting company Greenwich Associates found that new business is tough to come by. More than 80% of corporate pension funds use a master trust, and seven of eight winners of master trust accounts were replacing previous master trustees. In a such a mature market, banks are cutting prices to attract business from competitors.

Some banks see growth opportunity in defined contribution plans such as the 401(k), in which employers and employees contribute to open-ended accounts. According to the Employee Benefit Research Institute in Washington, defined contribution funds totaled $460 billion last year. In 1982, these were 32% of all pension funds. In 1989, they grew to 38%.

Some bankers see the personal trust business as another likely source of growth.

"The opportunities for growth through fee increases are nonexistent on the institutional side," said Mr. Boyles of Mellon. "But there are still opportunities for banks on the personal side."

In trust departments, where past efforts to garner new business largely consisted of reading obituaries, recruiting personal trust clients is now a top priority.

Bankers say that more people are wealthier at a younger age now, creating demand for investment management and a more sophisticated array of investment products. In trust departments, where past efforts to garner new business largely consisted of reading obituaries, recruiting personal trust clients is now a top priority.

Banks have hired more professional investment managers to compete with investment advisers, Wall Street companies, and insurance companies.

Focus on Personal Trust

Even the major corporate trust banks are looking to attract more personal trust customers.

"Personal trust is now more of a focus for us," said Mr. Sutfin. Northern Trust opened offices in California and Florida to pursue personal accounts.

How do banks perform as investment managers? A recent study by CDA Investment Technologies Inc. for the American Bankers Association showed that investment managers at banks outperformed their nonbanking competition in some measures of return on equity and fixed-income investments.

Over a three-year period, banks had a 16.1% annualized rate of return on equities, slightly ahead of investment advisers at 16.0%, insurance companies at 15.9%, and mutual funds at 13.8%. Over a five-year period, insurance companies and investment advisers did better than banks.

In the fixed-income arena over three years, insurance companies led the field, with an 8.2% annual return. Banks had a 7.7% return, and mutual funds 5.9%. ☐

Thrift in Houston Taps George Bender

NEW YORK — George R. Bender, formerly chief executive officer of Centrust Bank's mortgage unit, has been tapped to head the mortgage operations of United Savings Association of the Southwest, Houston.

That thrift, led by mortgage-securities pioneer Lewis S. Ranieri, has been expanding rapidly in the home-loan field.

Last week, it completed purchasing the 15-state origination network of Commonwealth Mortgage of America L.P.

Mr. Bender's previous company was Centrust Mortgage Corp., Deerfield Beach, Fla. The parent thrift, which is based in Miami, was seized by the federal government in February. ☐

NCS

ARE YOU GETTING THE MOST OUT OF YOUR TRUST SYSTEMS?

Is your department responding to customer needs and accessing information as quickly and cost-effectively as it could? Are your present systems allowing the department to realize its profit potential?

FIND OUT FOR SURE.

Get *The Systems Review Checklist*. The comprehensive guide for selecting and evaluating trust systems for your company. It includes the questions you should definitely consider in any systems review. As well as how to differentiate various systems' benefits and shortcomings. It's free. Just return the attached coupon, or call us for more information at **1-800-877-1655.**

I want to get the most out of my trust systems. Send me your *Systems Review Checklist*. I've checked the version(s) I'm interested in below.

Health of FDIC Being Exposed To the Spotlight

By BILL ATKINSON

ANALYSIS: *Follow-up on the news*

As barometers of the political mood, the Sunday morning television interview programs have latched onto banking industry issues with a vengeance.

The programs have turned a spotlight on the savings and loan crisis and the impact of declining real estate markets, both tarnishing the image of bankers.

But now the interview shows – and the media in general – are confronting what could be the most damaging issue of all: the health of the Federal Deposit Insurance Corp.

Whereas the thrift debacle affected only one segment of the financial industry, and real estate problems have been viewed as regional, the FDIC insures virtually every depository institution in the country.

Washington lawmakers, among others, are beginning to wonder if the crisis that led to the demise of the Federal Savings and Loan Insurance Corp. may repeat itself in the FDIC's much bigger commercial bank fund.

Two Kinds of Worry

Bankers worry that they may be assessed higher premiums to replenish the bank insurance fund, but consumers may feel a very different kind of alarm about the safety of their deposits.

On July 15, at least four major news programs discussed banking and thrift-related issues, with the FDIC question moving to the forefront.

FDIC Chairman L. William Seidman made comments that members of the general public might have found most startling. He acknowledged that the $13 billion fund that insures deposits at more than 13,000 commercial banks is under "considerable stress" and could be hurt in the event of a long recession.

Worst-Case Scenario

Several days before Mr. Seidman made his appearance on CBS News' "Face The Nation," a senior FDIC official said before a group of savings and loan executives that the bank insurance fund could lose as much as $2 billion in a worst-case scenario. And last Wednesday, Mr. Seidman returned to an NBC morning news program to say, "If we had a long and deep recession, [the bank insurance] fund might not be able to handle it."

Industry observers say that in the wake of bad loans to developing countries, in real estate,

Doubts, Pressure, Shake-Up Lead To Brain Drain from Comptroller

By BILL ATKINSON

WASHINGTON — The Office of the Comptroller of the Currency tossed the banking industry on its ear this year with a series of tough real estate exams. But meanwhile, the agency has been undergoing a shake-up of its own.

Since last fall, four senior staff members have left the regulatory unit, and a fifth plans to leave. Meanwhile, four other top regulators have been reassigned to lesser posts.

Key Divisions Affected

The changes have all occurred in the agency's two key divisions: bank supervision policy, which sets exam policies and schedules, and bank supervision operations, which conducts the exams.

The brain drain seems to have resulted from low morale among senior staff members who felt their recommendations were ignored and from recent reorganization that has unsettled employees.

Whatever the reasons, the changes, coming when the agency is being criticized for overzealous examinations, have raised questions about its stability and its capacity to do its job in particularly troubled times.

Chief's Tenure in Doubt

Further clouding the picture is the fact that Robert L. Clarke's five-year term as comptroller ends in December and his reap-

Financial Firms Set To Bid on RTC Assets

By DEBRA COPE

WASHINGTON — Several major financial institutions are preparing bids for $500 million blocks of assets held by the Resolution Trust Corp., sources said Tuesday.

The expected bidders include Shearson Lehman Hutton Inc., Merrill Lynch & Co., Goldman, Sachs & Co., the Federal National Mortgage Association, the J.E. Robert Companies, an investment group led by former Treasury secretary William Simon, and NCNB Corp.

They are said to be seeking the sour loans and other government-seized assets for their own accounts or for resale in the form of securitized or whole-loan packages.

Moving Assets to Private Sector

The bulk transactions have been designed by the RTC to move assets faster off its books and into the private sector. The first three bulk asset packages will be assembled for bidding in late November and the sales closed in early 1991.

Under a plan outlined by RTC staff members Tuesday at an open board meeting, the

Private Market Placements Up, Participants Say

By WILLIAM GOODWIN

Despite earlier predictions of a sharp dropoff in private-placement volume, activity has picked up considerably in the past month, according to market participants.

They cite a combination of factors, including the so-called credit crunch, a dip in interest rates, and the demise of the public high-yield bond market.

"We've seen a lot of increased activity from companies that are nervous about banks pulling their [short-term credit] lines," said Maleyne Syracuse, vice president in charge of private placements at Bankers Trust New York Corp.

In addition, a number of highly leveraged transactions are now being refinanced in the private-placement market.

"That has definitely helped pick up" the market, said Robert Szymczak, manager of data

Greenspan Vows Fed Is Continuing Inflation Fight Despite Cut in Rates

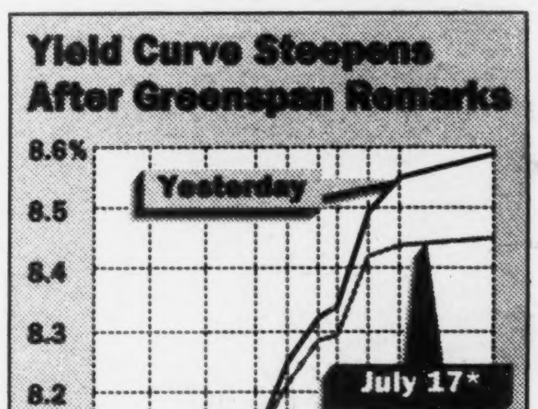
By LINDA CORMAN

WASHINGTON — In an effort to convince skeptical markets that he had not give up the fight against inflation, Federal Reserve Board Chairman Alan Greenspan on Tuesday reiterated that the July 13 easing of short-term interest rates was forced by recent signs of overly restrictive lending practices by banks.

"We have not done anything to alter our policy path," Mr. Greenspan told a House Banking subcommittee. It was his second congressional appearance in successive weeks to present his semiannual report on monetary policy targets.

Further Cuts Called Unlikely

In testimony last week to the Senate Banking Committee, Mr. Greenspan said further interest rate cuts were unlikely unless necessary to counteract excessively tight bank credit. (For excerpts from that testimony, see page 5.)



*Day before Greenspan's initial comments

Data source: Reuters

Analysts said the Fed chairman's remarks on Tuesday were meant to lessen confusion and address credibility problems in the financial markets since the Fed dropped the federal funds rate from 8.25% to 8.0%. Fed watchers, citing a lack of economic data to justify a lowering of rates at that time, suggested

COMMENT/ *By Alfred Pollard and Thomas Greco*

Congress Must Correct Superfund Law

"No showing of fault is required, and one person may be made to pay for the entire cleanup even if there were other responsible parties involved."

The Comprehensive Environmental Response, Compensation, and Liability Act, commonly known as Superfund, was enacted in 1980 in the wake of several well-publicized discoveries of hazardous waste sites, such as the Love Canal area in New York and the Hooker Chemical facility in Montague, Mich.

The law was designed as a comprehensive scheme for addressing environmental hazards. In addition to creating a means to promptly and effectively respond to the release of hazardous substances, Congress developed an elaborate framework of liability that imposes cleanup costs on those parties responsible for causing the contamination.

Superfund, as applied by the courts, imposes strict joint and several liability for the costs of responding to a release or threatened release of hazardous substances and for the harm to natural resources caused by such release [42 USC 9607(a)].

No showing of fault is required, and one person may be made to pay for the entire cleanup even if there were other responsible parties involved. The latter concept has the effect of forcing a single responsible party to attempt to recover from others who were also involved.

Liability Under Superfund

Liability is based on three elements:

- A release has occurred or is threatened.
- Response costs were incurred (that is, costs to investigate, remove, or otherwise deal with the hazardous substances).
- The person involved falls into one or more of four categories of responsible parties outlined in the law (specifically, a current owner or operator of a facility; a former owner or operator of a facility at the time of disposal of a hazardous substance; a person who arranges for transport, treatment, or disposal of hazardous substances; or the transporter of hazardous substances).

Defenses Under Superfund

The Superfund law specifies three limited defenses to liability:

Under 42 USC 9607 (b)(3), a person is relieved from liability if a discharge was caused by an act of God, an act of war, or "an act or omission of a third party." For the third party defense to apply, the "third party" cannot be an "employee or agent of the defendant" or someone whose act or omission occurs in connection with a contractual arrangement.

Under the Superfund Amendments and Reauthorization Act of 1986, a contractual relationship is defined in 42 USC 9601 (35)(A)to include "land contracts, deeds, or other instruments transferring title or possession."

When a land contract is involved, however, a defendant is entitled to assert an "innocent landowner" defense in certain narrowly drawn circumstances.

To prevail, a defendant must establish two elements:

- That the property was acquired after the hazardous substance was placed there and at "the time the defendant acquired the facility the defendant did not know and had no reason to know that any hazardous substance which is the subject of the release . . . was disposed of on, in, or at the facility."
- That at the time of acquisition of the property, the defendant had undertaken "all appropriate inquiry into the previous ownership and use of the property consistent with good commercial or customary practice in an effort to minimize liability." See 42 USC 9601 (35)(B).

To establish whether the owner undertook "all appropriate inquiry," the law requires courts to "take into account any specialized knowledge or experience on the part of the defendant, the relationship of the purchase price to the value of the property if uncontaminated, commonly known or reasonably ascertainable information about the property, the obviousness of the presence or likely presence of contamination at the property, and the ability to detect such contamination by appropriate inspection."

The law also provides that an owner who "by any act or omission caused or contributed to the

Citi Compensates. Although Citicorp did not mention the word "bonuses" last week in describing its reconfigured investment and commercial banking sector, some insiders expect to be compensated according to new criteria.

"Intangibles such as better customer morale and increased market share didn't used to count because everything was calculated by profit-center earnings," one banker said. "Bonusable events now seem to include other longer-term things. This is something that [chairman John] Reed has been saying a lot internally."

Citicorp hinted as much by saying it will no longer calculate profit-center earnings for each of its 50-odd businesses in the sector. Instead it will emphasize performance measures that stress revenues, market share, and "tier position" – customers' evaluation of Citicorp as their first, second, or third-choice bank. In the past, tier position was calculated for issuers but not for investors.

* * *

CRA Relief Fees. A satellite industry is emerging to help banks cope with their Community Reinvestment Act obligations. The latest manifestation: A Virginia company that plans to offer guarantees on certain loans to borrowers in poor communities.

"Banks have not been able to fulfill the new requirements because they usually require substandard loans," said Lee Fishman, president of Allstate Financial Corp., a NASDAQ-listed company with a net worth of $8 million that specializes in factoring and financing of "nonbankable" young companies.

DAVID ROCKEFELLER will hold Chase's international meeting in New York.

Allstate, which is not related to the insurance giant, expects to charge a fee of 5% to 10% of the loan it agrees to guarantee. It will also monitor the borrower's collateral for a service fee of about 1.5% of the value of the borrower's receivables.

Mr. Fishman, who said he became aware of banks' CRA quandaries as a board member of Megabank in Miami, expects to sell his first guarantee within a week to a bank in the Washington area. He said he is talking with Crestar, Riggs National Bank, and Maryland National Bank, among others. Allstate, which owns Receivable Financing Corp. in New York, has a 3A-2 Dunn & Bradstreet rating, the third highest for a firm its size, Mr. Fishman said.

* * *

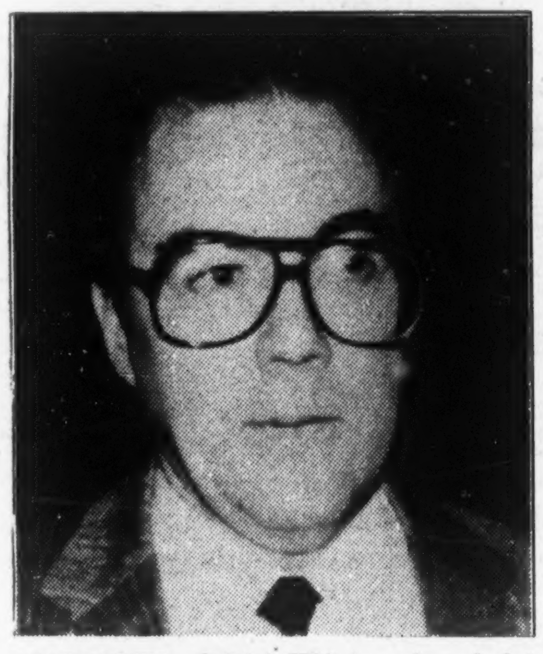
At Home Abroad with Chase. Chase Manhattan Corp. signaled its new emphasis on thrift last week when it said that its international advisory committee – chaired by David Rockefeller and "counseled" by Henry Kissinger – would meet in New York rather than overseas. (*The New York Times*, which broke the story, did not say how much the bank expects to save by flying in and housing, in low-priced Manhattan, the committee's far-flung members from 17 nations.)

Chase chairman Willard Butcher was battered at the bank's annual meeting by an investor who wanted to know why the bank had flown its 22 directors and their spouses for a meeting in Italy and Germany last year. Mr. Butcher, who said the trip cost over $1 million, justified it as a way to educate the board about Chase's plans for expansion in Europe after the 1992 economic unification. Chase has since drastically cut those plans.

* * *

The Citi Lineup. In attempting to eliminate the bureaucratic structure of its global finance sector, Citicorp is harking back to the old division between investment and commercial bankers. The new lineup of eight executives aiding sector head Michael Callen is being divided into customer men who sell to investors (investment banking/capital markets/distribution) and issuer men. They ostensibly have no administrative responsibilities, such as hiring, but will cultivate specialties such as cost cutting.

Ernst Brutsche, who chairs the sector's foreign exchange and derivative products committee, is focusing on selling to investors in Europe. Jeffrey Grandy oversees European issuer services, such as origination, M&A, high-yield advisory, venture capital, and leveraged deals.



MICHAEL CALLEN leads eight executives at Citicorp.

Phillip Lassiter picks up the investor mandate in North America, while Michael Welch oversees North American corporate borrowers. Todd Slotkin is responsible for specialized finance and advisory activities in the Untied States and Canada.

Responsibilities for capital market activities and sales of securitized products – considered customer activities – go to Rodney Ballek in North America and Peter Burnim in Europe. ☐

STOCKS

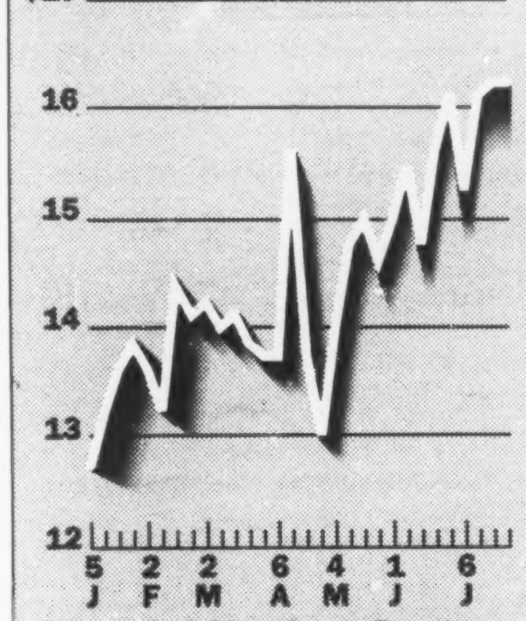
Insiders Show Confidence in Valley National

By GORDON MATTHEWS

NEW YORK — Insiders at Valley National Corp. apparently believe the sun is about to shine again on the Phoenix banking company. Top officials at the bank spent $700,000 to buy a large number of its shares in recent months, coinciding with a rise in the company's stock price.

Valley National's profitability has been impaired over the past two years by the severe downturn in the Arizona real estate market, which began earlier than the difficulties in other areas of the country.

Valley National Shares Keep on Climbing



Price of $16.25 at 3 p.m. Tuesday

Sources: DB Technology Inc., Reuters

Analysts are divided on whether a recovery has begun in the area, but the price of Valley's shares has clearly been on the rise since directors began acquiring additional stock last spring.

Action in Brief Period

According to Invest/Net Group Inc., which that tracks such activity, seven directors of Valley accumulated 50,000 shares at an average cost of $14 between April 20 and May 2.

At midday on Tuesday, Valley's shares traded at $16.25, up 75 cents on the day and 26.5% ahead of its yearend level.

The largest insider buyer was Robert F.B. Logan, Valley's president, who acquired 25,000 shares. Richard Lehmann, its chairman and chief executive officer, bought 4,000 shares.

Stake Had Been Small

The insider buying has helped adjust a situation that analysts considered a negative: a minimal stake in the company by its senior managers and directors.

Valley's 1990 proxy statement, dated March 15, listed Mr. Lehmann as owner of just 584 shares and Mr. Logan, its president, just 400 shares.

Insiders are differently motivated than other investors, noted Frank W. Anderson, a banking analyst at Stephens Inc., Little Rock, Ark. Tied to the fortunes of a company, they tend to be longer-term oriented, "but we are in a very short-term market right now," he said.

While the first two quarters this year were much improved at Valley, "I think it's still too early to be an aggressive buyer," said Mr. Anderson.

More optimistic is Thomas K. Brown, who thinks Valley is undervalued but acknowledges he is in the minority.

Takeover speculation has also boost the stock. On June 4, its shares stirred to life on takeover speculation after BankAmerica Corp. said it would buy a failed thrift in Arizona, Western Savings and Loan Association, Phoenix.

The move left industry observers wondering if Valley is now the only fully functioning vehicle for a possible Arizona entry by Wells Fargo & Co. The San Francisco superregional is the only big Western bank lacking a presence there.

* * *

TUESDAY'S MARKET

Most bank and thrift stocks declined again on Tuesday as the stock market in general remained indecisive about the direction of the economy.

J.P. Morgan & Co., the nation's premier money-center bank, was off 50 cents, to $36.75 in afternoon trading. Chemical Banking Corp., who price was quoted erroneously in Tuesday's column, was unchanged at $23.75.

Manufacturers Hanover Corp. fell $1.375, to $30.75, but analysts said the weakness was apparently not related to any financial developments.

Shares of Student Loan Marketing Corp. fell $4.875 in early trading but recovered some ground after Education Secretary Lauro F. Cavazos said the integrity of the Guaranteed Student Loan Program was not threatened by the financial problems of a large guarantor.

By the middle of the afternoon, Sallie Mae, as the organization is known, was off only $2.375 at $47.50. ☐

CAPITAL

Capital-Rich Have Pricing Edge, Study Says

By KELLEY HOLLAND

The new risk-based capital rules are accentuating the differences between the haves and the have-nots in banking by allowing well-capitalized institutions to compete aggressively on pricing, according to a survey released by the American Bankers Association.

And those differences are likely to increase, according to Dennis G. Buchert, a sector executive at Marine Midland Bank and chairman of the American Bankers Association's Corporate Banking Executive Committee.

"Over the long term, I think the cost of capital for banks will ultimately be reflected in an industry-wide repricing" of services, Mr. Buchert said. "If banks are going to continue to grow, they are going to have to reprice services at some point."

Subtle Pricing Changes

Even though almost all of the nation's largest banks already have risk-based capital in excess of the levels to be required in 1992, they are making subtle changes in the way they price their services and allocate their capital, the survey showed.

For one thing, banks with capital in excess of minimum levels can afford to price high-quality individual corporate loans more aggressively. This positions them well to develop relationships with borrowers, which will lead to repeat business that is profitable in the aggregate.

But banks with little extra capital need to price every loan so it is profitable, because their marginal cost of capital would be painfully high in today's hostile markets.

"Banks with less capital have to price at the transaction level, so that at the margin they are profitable, whereas banks with excess capital can rely more on relationship profitability," Mr. Buchert said.

Capital Rules Spur Loan Pricing Changes

Percent of banks adjusting loan pricing to adapt to new capital guidelines

	Small banks	Midsize banks	Large banks
Higher rates on all loans	11.8%	38.5%	29.4%
Low rates for low-risk loans and no change on other loans	17.6%	0%	5.9%
High rates for high risk and low rates for low risk	55.9%	38.5%	41.2%

Source: American Bankers Association

Survival of the Fittest

The difference in pricing flexibility between banks with excess capital and those without it is just one more indication of the Darwinian nature of banking today, Mr. Buchert said. Banks from Bank of New England Corp. to Washington Bancorp.have already learned that institutions truly in need of capital must pay top dollar for it – if they can raise it at all.

The ABA study points out that banks with excess capital also have advantages on the lending side of their business. "Those banks that are well ahead of the risk-based capital requirements definitely have the opportunity to turn that into a competitive advantage in terms of pricing services and developing relationships," Mr. Buchert said.

In the study, banks said they would differentiate more between high-quality and low-quality borrowers when pricing loans. On average, 48.4% of banks said they would offer lower rates on low-risk loans and higher rates on high-risk loans. Only 11% said they would lower rates on low-risk loans while leaving rates on high-risk loans unchanged, and just 22% said they would raise rates on all loans.

Turning to Other Methods

Both stock and bond investors are negative on bank securities these days, so banks seeking to boost their capital ratios prefer other methods. Asset securitization is the method of choice, according to the survey. Downsizing the institution came second, followed by slow growth and risk profile restructuring. Selling more stock was the least-favored method.

A total of 377 banks with assets of $1 billion or more were sent questionnaires, and 105 of them responded. Tier 1 and Tier 2 ratios of those banks were not revealed.

MARKET MONITOR

NCNB Corp.'s $200 million issue of 25-year subordinated bonds was priced on Monday at 166 basis points over comparable Treasuries, with a coupon of 10.2%. The offering, lead-managed by Merrill Lynch Capital Markets and comanaged by Salomon Brothers Inc. and Goldman, Sachs & Co., was all sold on Tuesday. ☐

FINANCIAL TECHNOLOGY·UPDATE

NCR's Electronic Journal (EJ) automates the audit data collection of ATM operations. EJ eliminates costly journal printers and supplies in favor of floppy disk storage in the existing disk drive.

EJ simplifies replenishment, speeds customer inquiries, and increases storage capacity of audit data for the ATM.

PC utilities allow bank personnel the ability to browse, search, and store diskette data contents. And the diskette is reusable after the transfer of its contents.

NCR's 5223 Passbook/General Purpose Printer is a compact, light-weight device which has been designed to print on passbooks and most non-continuous documents.

It can be used by tellers, either as a dedicated unit or in a multi-user mode. The printer's multi-functional characteristics, its reliability, high speed, and friendly, human interface, make it ideally suited for today's financial and office environments.

The NCR 5367 Financial Workstation is designed to provide an effective price and performance solution for the different functional areas of the branch.

The 5367 Financial Workstation has standard security features like battery back-up for storing totals and protecting sensitive data in the event of a power failure, and it can support multiple peripherals.

Various options enhance the workstation's capability. These options include a high speed NBS/DES Encryptor which protects data files and other sensitive information being transmitted or stored.

The 5367 Financial Workstation can be customized for specific environments and it is based on industry standard components and an open architecture... making sure it can meet the growing needs of financial institutions.

Firewalls May Have Outlived Their Usefulness

By LINDA CORMAN

Firewalls, the regulations that are meant to insulate banks from the problems of their nonbank affiliates, may not be necessary after all.

None other than Federal Reserve Board Chairman Alan Greenspan cast doubt on firewalls in a dramatic declaration earlier this month:

ANALYSIS: *Follow-up on the news*

"The board has for some time held the view that strong insulating firewalls would both protect banks and taxpayers from the risk of new activities and limit the extension of the safety-net subsidy that would place independent competitors at a disadvantage," Mr. Greenspan testified July 12 before the Senate Banking Committee.

Recent events, including the demise of the brokerage firm Drexel Burnham Lambert Inc., "have raised serious questions about the ability of firewalls to insulate one unit of a holding company from funding problems of another," Mr. Greenspan said.

According to Fed sources, Mr. Greenspan was troubled by the fact that Drexel drained capital from a healthy subsidiary to meet the parent's commercial-paper obligations, which eventually crippled the entire company. The same problems could imperil subsidiaries of bank holding companies.

According to many observers of the bank-structure debate, Mr. Greenspan thus has effectively undermined the firewall concept. Regulators and bankers had agreed that the firewalls made it safe for banking companies to enter more risky securities businesses, because the affiliated banks would not be affected by – or have to pay for – an affiliate's collapse.

Stricter Supervision Favored

To be sure, Mr. Greenspan did not recommend a wholesale dismantling of the walls. But he did suggest that if banks are to be granted wider powers – as the Fed has long advocated – higher capital standards and more stringent supervisory control would be more effective than firewall-type insulation.

"It may be more realistic to apply more limited firewalls to the new activities," he said.

In one example of a limited firewall, the Federal Reserve Act currently allows some lending between banks and their nonbank, nonsecurities affiliates. The loans must be collateralized and are limited based on a

Private S&Ls Losing Less, OTS Reports

By DEBRA COPE

WASHINGTON — The 2,505 savings institutions that remain operating in the private sector lost $271 million in the first three months of 1990, the Office of Thrift Supervision reported Wednesday.

The aggregate loss was significantly less than the $900 million that the same 2,505 institutions lost in each of the last two quarters of 1989, but was far worse than their $900 million profit in the first quarter of last year.

If the thrifts not in conservatorship lose money throughout the year at the same pace as in the first quarter, the industry deficit would exceed the $900 million net loss for all of 1989. That figure did not include the performance of institutions placed under government control in 1990, which brought the total loss for 1989 to $6.2 billion.

A Wide Disparity

In its release of industry data, the OTS pointed up a wide disparity in thrifts' profit performance by dividing the industry into four groups based on profitability and survivability. Almost half of the 2,505 private-sector thrifts are considered well-capitalized and profitable, but their profits were not sufficient to bring the entire group into the

Europe's Surging Banks Outpace Japanese, U.S.

By SAM ZUCKERMAN

Forget Europe 1992. In banking, the continent's party has already begun.

Thirty months before Europe's vaunted economic integration, *American Banker's* annual ranking of the world's 100 largest banking companies reveals that European institutions grew much faster than their U.S. and Japanese counterparts in 1989.

Contrast in Assets Growth

Assets of the top 43 banks based in 10 European countries rose 16.92% in dollar terms last year. The 14 U.S. banks among the top 100 raised assets a moderate 6.57%. (See table, page 27A.)

Only a fraction of the European growth stemmed from currency appreciation. While the assets of French, Italian, and German banks in the top 100 soared 23.07%, 21.34%, and 17.14% respectively, the franc gained only 6.13%, the lira 3.14%, and the deutsche mark 5.38% against the dollar.

Shrinkage in Japan

Assets of Japanese banks, the growth leaders in recent years, actually shrank 0.51%, as measured in U.S. dollars. The decline largely reflected a 16.2% depreciation of the yen against the dollar in 1989.

The reshuffling in the ranks of the top 100 in 1989 reflected a shift in banking power away from Japan and North America and toward a resurgent Europe – a trend that has picked up steam this year, banking analysts said.

Assets and Capital Grew Fastest in 1989 At European Banks

Many Pennsylvania Banks Forgo State's Antitakeover Protection

By GORDON MATTHEWS
and FRED VOGELSTEIN

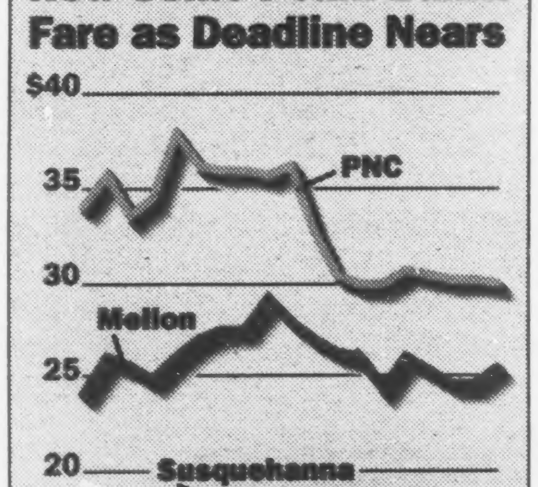
Many, but not all, of Pennsylvania's major banking companies have decided to forgo the protection of that state's tough new antitakeover statute. The deadline for opting out of the controversial law is today.

The state's three largest banking companies – PNC Financial Corp. and Mellon Bank Corp. of Pittsburgh and Corestates Financial Corp., Philadelphia – have taken the action, although they are seen by many industry analysts as in little danger of hostile takeover.

But so have some midsize Pennsylvania banking firms that could eventually be targets, such as Meridian Bancorp., Reading, and Independence Bancorp., Perkasie.

Among the banking firms that have exercized the option of dropping some coverage of the law is the midsize First Eastern Corp. of Wilkes-Barre.

How Some Penn. Banks Fare as Deadline Nears



Source: DB Technology Inc, Reuters

Ironically, its chairman and chief executive officer, Richard M. Ross Jr., also chairs the Pennsylvania Chamber of Business and Industry, which lobbied forcefully for the law.

Mr. Ross explained that he

Columbia S&L Sells $3 Billion Of Junk Bonds

By TERESA CARSON

LOS ANGELES — Columbia Savings and Loan Association announced Wednesday it sold its junk-bond portfolio to an investor consortium for $3 billion in cash and notes, but analysts predicted regulators would still seize the troubled thrift.

"They are still insolvent. They will still be closed. There is no doubt there," said Jay H. Lustig, director of high-yield securities trading at Drake Capital Securities, Los Angeles.

Premium Is Estimated

Beverly Hills-based Columbia did not disclose the premium paid for the bonds. The bonds had a market value at $2.9 billion at the end of the first quarter, indicating a premium of about $100 million. That would not be enough to eliminate Co-

COMMENT/*By William M. Isaac*

Casting Blame Only Diverts Attention from S&L Cleanup

It's the silly season in Washington. Democrats are attempting to pin the blame for the S&L disaster on President Bush and the Republicans. The White House has fired a volley to remind the loyal opposition that two can play that game. Both sides, apparently sensing the need for diversion, are now engaged in one-upmanship on criminal prosecutions.

Don't get me wrong; I don't have anything against throwing thieves and other assorted rascals in jail. It needs to be done if only as a deterrent to would-be thieves. But let's not kid ourselves. It may be satisfying to flog the scoundrels, but it won't make the S&L fiasco any less painful to the taxpayers.

Lucky to Break Even

I suspect we'll be lucky if the monetary recoveries from the prosecutions exceed their cost. And to the extent that criminal prosecutions divert attention from the public policy mistakes that are at the root of the S&L crisis, they will be counterproductive.

A potentially more harmful political sideshow is developing with respect to the cleanup program. The Democrats can't finger George Bush for creating the S&L mess, for the simple reason that he was not in power when it arose – unless someone wants to argue that the vice presidency is a power position.

Money Shortage Can Be Cured

Cognizant of the futility of arguing that point, the Democrats are railing against the Bush-designed cleanup program, contending that it is proceeding at a snail's pace. There is no question the cleanup program has had difficulty getting off the ground and continues to suffer from a shortage of money, staff, and systems. The money shortage can be cured anytime Congress and the administration choose to do so.

It will take time to resolve the staffing and systems problems. If the politicians push the Resolution Trust Corp. into moving faster than is reasonable in disposing of assets, the inevitable result will be massive doses of fraud, abuse, and just plain bad deals.

Public Is Finally Outraged

The politicians are playing these games because the public is finally beginning to comprehend the magnitude of the S&L disaster and is understandably angry. Politicians who had nothing to do with creating the mess are searching for ways to capitalize on it. Politicians whose fingerprints can be found at the scene of the crime are searching for ways to focus attention elsewhere.

We can't let that happen. We need to endeavor to understand the causes of the S&L collapse if we are to avoid its repetition. It is in this spirit that I offer a chronology of the major events leading up to the S&L crisis:

- The Johnson administration pursued a "guns and butter" fiscal policy in the mid-196Os, setting off inflationary pressures. These pressures led to higher and more volatile interest rates that impaired the viability of long-term lenders such as thrifts.
- The Hunt Commission recommended in 1971 that deposit interest rate controls be phased out, that thrifts and other lenders be allowed to offer variable-rate mortgages, and that mutuals be permitted to convert to stock form. The recommendations were ignored. The Federal Reserve Board compounded the situation in 1977 by ruling that bank holding companies may not acquire healthy thrifts.
- Inflation raged during the Carter administration, and the prime rate soared above 21%. Thrifts suffered massive disintermediation and began to hemorrhage red ink because they held long-term, fixed-rate loans.
- Congress belatedly authorized deregulation of interest rates in 1980. A last-minute deal was cut, over the objections of the Federal Deposit Insurance Corp., to raise deposit insurance from $40,000 to $100,000, marking the first time that fully insured deposits were offered without interest rate controls.
- The Reagan administration assumed office in 1981. The Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corp. were overwhelmed by failing S&Ls. Responding to intense industry and congressional pressures, the bank board lowered capital standards for S&Ls and adopted loss-deferral, appraised equity, and other regulatory accounting techniques to allow insolvent thrifts to continue in operation.
- Congress, with the support of the Reagan administration, in 1982 passed the Garn-St Germain Act, which broadened the investment and lending authorities of S&Ls. The law sanctioned reduced capital standards for thrifts by mandating a net worth

THE LOBBYISTS

Providers Create Legislative Post For Sheryl McGrath

Sheryl Peterson McGrath
American Financial Services Association

The **American Financial Services Association** has named **Sheryl Peterson McGrath** director of legislative affairs, a new position created for Ms. McGrath.

For the past three years she has been an assistant director for legislative affairs, lobbying the House of Representatives for the association, which represents providers of financial services to consumers and small businesses.

Ms. McGrath will coordinate the association's lobbying on Capitol Hill and play an increased role in strategy development and planning, while continuing as the group's liaison to the House. She will report to **Frank Salinger,** director of government affairs.

Her agenda in the next year includes legislation to diversify regulatory oversight of the financial services industry by function rather than by the status of the parent company, and an effort to make it more difficult for consumers to file for bankruptcy, Ms. McGrath said.

The American Financial Services Association also will oppose efforts, now under consideration in the White House-congressional talks on the federal budget deficit, to "tinker" via taxation with current provisions for mortgage interest deduction, Ms. McGrath said.

Ms. McGrath holds a bachelor's degree in government and politics from George Mason University and an MPA in executive legislative and regulatory management from George Washington University.

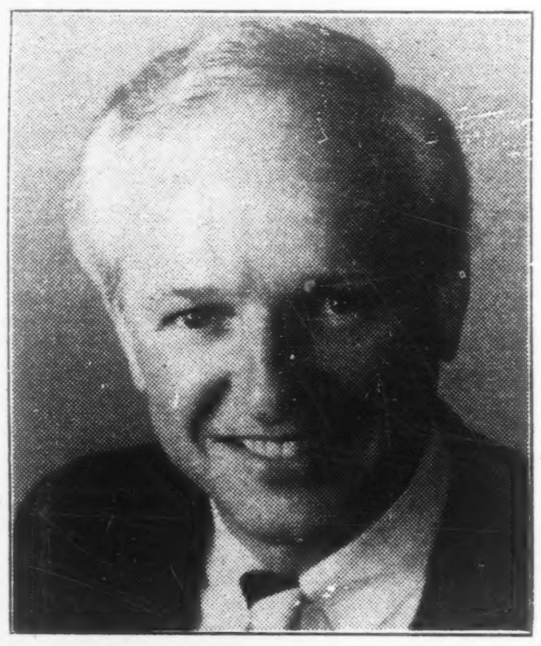
Housing Groups Rally To Save Deductions

Housing industry groups are cranking up their grass-roots machinery now that the popular home mortgage interest deduction and other itemized tax breaks are on the table at the budget summit.

No deal has emerged yet, but negotiators from Congress and the Bush administration, rooting through the tax code for ways to boost revenues, are weighing reductions in the value of itemized deductions for the wealthiest taxpayers.

One trade group, the **National Association of Realtors,** isn't taking any chances. In a preemptive strike unleashed on July 13, the Realtors reminded President Bush of a pledge he made, in a speech to the 800,000-member trade group last November, to support both mortgage interest and property tax deductions.

"It would be both imprudent and counterproductive ... to adopt any policy that would limit, either directly or indirectly, the value of the mortgage interest deduction," wrote **Norman D. Flynn,** the group's president.



Norman D. Flynn
National Association Of Realtors

Congress first curtailed the once-inviolable mortgage interest deduction in 1986, opening the door to further limits.

"Clearly, it's something we're watching very closely," said a **National Association of Home Builders** lobbyist. More than a month ago, the builders alerted their members to prepare for a fight over the mortgage interest deduction. Both groups are urging members to lobby senators and representatives in their districts during the August congressional recess.

Businesses Forge Trans-Atlantic Link

Leaders of major American and European Community-based businesses said this week they had formed a new organization, the **European Community Chamber of Commerce in the United States,** to represent the shared interests of American and European companies in expanding transatlantic trade and investment.

Among the well known companies that have joined the lobbying group are **Lazard Freres, NMB Post Bank,** and **Price Waterhouse.** The new group was created and financed by business, without government assistance, and will complement the work of individual chambers of commerce representing the 12 European Community nations.

Significant investment flows are at stake. The value of two-way trade between the United States and European Community increased to more than $171 billion in 1989, with U.S. exports to the community exceeding imports by $1.29 billion. According to the U.S. Department of Commerce, direct investment in the United States by the European Community totaled some $235 billion, while U.S. direct investment in the 12 member states of the European Community reached nearly $150 billion by the end of 1989.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989. **N.A.**— Not available.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)—** A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated for affiliates more than 50% owned. **(v)—** Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)—** Rank based on revised asset total for 1988. **(‡)—** Restated to reflect changes in consolidation in 1989. **N.A.—** Not available.
